OLYMPUS

COURSE OVERVIEW

This event will bring together leading clinicians, scientists as well as early age onset (EAO) colorectal cancer (CRC) survivors and Caregivers from across the country and internationally. The program will provide extensive opportunities for participants to advance their understanding of the rapidly increasing incidence of rectal and colon cancer among young adults under 50 years of age in the U.S. and abroad.

This groundbreaking program will, for a fifth consecutive year, provide all participants the opportunity to hear from and question leading clinicians and researchers on the life saving potential of timely clinical risk assessment/family cancer health history; earliest possible diagnosis, optimal, fertility preserving clinical care, as well as the latest information regarding national and international EAO CRC incidence trends, pathogenesis, and genetics. In addition, this year's program will present a "Research in Progress" segment featuring currently NCI funded and planned EAO CRC research projects from across America and Europe. Again this year, important Breakout Sessions based on needs-assessments from our survivor community will address challenging issues surrounding Palliative Care, support networks for "Caregivers" and a "Primer" on the "Epigenetics" of EAO CRC specifically requested by our Young Adult CRC Survivor Program Advisory Group.

The course will include lectures, workshops and panel discussions designed to advance the "state-of-the-science" addressing EAO-CRC. Our faculty will once again be world class speakers representing leading academic medical centers with major additional inspiring programmatic contributions from the Early Age Onset Colorectal Cancer Survivor Community of the United States and beyond..

EDUCATIONAL OBJECTIVES

Provide an expert review of the latest published information on the increasing incidence and mortality associated with Early Age Onset Colorectal Cancer in the United States and globally.

Review the State-of-the-Science regarding the known and possible causes of the increasing incidence of EAO-CRC including alterations in our food and water supply, the contribution of novel germline genetic factors and etiologic clues based on the molecular biology of EAO-CRC cancers.

Provide an evidence-based framework for reducing risk, increasing early stage diagnosis and improving treatment and outcomes for young adult colorectal cancer patients.

Define the “Gaps” in our current understanding of Early Age Onset Colorectal Cancer in order to set our clinical and research priorities and develop a strategic plan to reduce EAO-CRC incidence and mortality.

COURSE DIRECTORS

Thomas K. Weber, MD, FACS
COURSE MODERATOR/CHAIR
Director of Surgical Oncology
Northwest Region at Northwell Health
Professor of Surgery Donald and Barbara Zucker School of Medicine at Hofstra/Northwell
Founder and President
Colon Cancer Foundation

Susan K. Peterson, PhD, MPH
COURSE CO-DIRECTOR AND POSTER SESSION CHAIR
Professor of Behavioral Science
The University of Texas MD Anderson Cancer Center

COURSE DIRECTORS

Wasif M. Saif, MD
COURSE CO-DIRECTOR
Deputy Physician-in-Chief and Director of Medical Oncology
Northwell Health Cancer Institute
Professor of Medicine
Donald and Barbara Zucker School of Medicine at Hofstra/Northwell

PLANNING COMMITTEE

Richard Barakat, MD
Physician-in-Chief and Director
Northwell Health Cancer Institute
Professor, Obstetrics and Gynecology,
Donald and Barbara Zucker School of
Medicine at Hofstra/Northwell

Cindy R. Borassi
Executive Director
Colon Cancer Foundation

Northwell health Cancer Institute
Professor of Medical Oncology
Donald and Barbara Zucker School of
Medicine at Hofstra/Northwell

Mary B. Strong, MA
Assistant Vice President, Continuing
Medical Education
Northwell Health

PLANNING COMMITTEE

Heather Hampel, MS, LGC
Associate Director, Division of Human Genetics
Associate Director, Biospecimen Research
Professor, Internal Medicine
Licensed Genetic Counselor
The Ohio State University Comprehensive Cancer Center

Krista Nelson, LCSW OSW-C BCD FAOSW
Oncology Social Worker
Program Manager, Quality & Research, Cancer Support Services & Compassion
Providence Cancer Institute & Providence St Joseph Health

Thomas K. Weber, MD, FACS

Director of Medical Oncology

SCHEDULE

This event will be
VIDEO RECORDED

THURSDAY, MAY 2, 2019

7:00 am–8:00 am	**Registration and Breakfast**
8:00 am–8:30 am	**Framing the Conversation: Strategic Challenges in Current Medical Care that Contribute to Young Adult Colorectal Cancer (CRC) Incidence and Mortality. Survivor Testimonials Underscore Opportunities for Improvement in the Prevention and Care of Young Adult Colorectal Cancer** Chelsea Boet,Sarah Debord, Kevin Hays, Kim Newcomer, Susan Pfau, Eric Reddy, Valarie Schlosser, Diana Sloan, Denelle Suranski, Tabitha Trent, Wes Hensel Opening Remarks: Richard R. Barakat, MD, Physician-in-Chief and Director, Northwell Health Cancer Institute How the Survivor Testimonials Framed Today's Program: Thomas K. Weber, MD, FACS, Northwell Health, Colon Cancer Foundation Housekeeping: Cindy R. Borassi, Colon Cancer Foundation

8:30 am–9:35 am	**Session I: The Dimensions of the EAO-CRC Problem: Target Item: Accurate, Regular, Up to Date Measurement of Key Metrics Describing the Early Age Onset Colorectal Cancer Public Health Crisis**
8:30 am–8:40 am	**Overview of United States EAO-CRC Incidence Patterns and Trends** Rebecca L. Siegel, MPH, American Cancer Society
8:40 am–8:50 am	**Overview of Global EAO-CRC Incidence Patterns and Trends** Thomas K. Weber, MD, FACS, Northwell Health, Colon Cancer Foundation
8:50 am–9:00 am	**Utilization of CDC Comparative Effectiveness Research Data to Assess Lynch Syndrome Screening and Surgical Management in Early-Onset Colorectal Cancer** Jordan Karlitz, MD, FACG Tulane University School of Medicine (VIA VIDEO CONFERENCING)
9:00 am–9:10 am	**Overview of European Cancer Registries Data Resources on EAO-CRC** Irit Ben-Aharon, MD, PhD, Rambam Health Care Campus, Haifa, Israel, European Organisation for Research and Treatment of Cancer (EORTC)

9:10 am–9:20 am	**Survey of Young Onset Patients, Survivors, and Caregivers: Self-Reported Clinical, Psychosocial, Financial and Quality of Life Experiences** Ronit Yarden, Ph.D. MHSA, Colorectal Cancer Alliance
9:20 am–9:35 am	**Q&A Panel Discussion–Strategic Plan Development**
9:35 am–9:50 am	**Networking, Coffee, Poster Viewing Break**
9:50 am–11:35 am	**SESSION II: Family History Ascertainment in the U.S. (Addressing Gap 1) What Steps are Needed to Improve the Well Documented Less Than Optimal Status of this Situation? What is Our Best Information on the Documentation of Cancer Family History in Primary Care? What are the Key Elements Required for Success** Moderator: Gregory Feero, MD, PhD, Maine Dartmouth Family Medicine Residency, Augusta, ME; Geisel School of Medicine at Dartmouth, Hanover, NH
9:50 am–10:10 am	**Electronic Health Records (EHR) and Family Cancer History Ascertainment. The Path Forward?** Gregory Feero, MD, PhD, Maine Dartmouth Family Medicine Residency, Augusta, ME; Geisel School of Medicine at Dartmouth, Hanover, NH

10:10 am–10:25 am	**Review of National Colorectal Cancer Roundtable (NCCRT) Family Health History Early Age Onset Colorectal Cancer (EAO-CRC) Task Group Progress and Overview of the NCCRT Risk Assessment and Screening Toolkit to Detect Familial, Hereditary and Early Onset Colorectal Cancer and Next Steps for Dissemination and Implementation** Dennis Ahnen, MD, AGAF, FACG, University of Colorado School of Medicine, Gastroenterology of the Rockies
10:25 am–10:40 am	**Implementation Plan for 2018 American Cancer Society Recommendations (and Rationale) for Screening for the Early Detection of Colorectal Cancer.** Robert A. Smith, PhD, American Cancer Society
10:40 am–10:50 am	**Strategies for Addressing Early Onset CRC: An NCCRT Report** Jan Lowery, Colorado Center for Personalized Medicine
10:50 am–11:00 am	**Detecting Unaffected Individuals with Lynch Syndrome (DUAL)** Sayoni Lahiri, MS, CGC, UT Southwestern Medical Center

11:00 am–11:10 am	**Prevalence of Advanced Colorectal Polyps Among First Degree Relatives of EOCRC Patients** Christine L. Sardo Molmenti, PhD, MPH Feinstein Institute for Medical Research, Northwell Health, Donald and Barbara Zucker School of Medicine at Hofstra/Northwell
11:10 am–11:15 am	**Integrating Education on the Importance of Family Health History Ascertainment and Earliest Possible Diagnosis into the Entire Continuum of Medical and Specialty Education from Medical School Through Board Certification, CME and Recertification** Thomas K. Weber, MD, FACS, Northwell Health, Colon Cancer Foundation
11:15 am–11:30 am	**Q&A Panel Discussion–Strategic Plan Development**
11:30 am–12:15 pm	**LUNCH**
12:15 pm–1:20 pm	**SESSION III: Earliest Possible Diagnosis and Treatment Through Timely Recognition of the Symptoms and Signs of Young Adult CRC (Addressing Gap 2)** Moderator: Whitney Jones, MD, Clinical Professor of Medicine, University of Louisville

12:15 pm–12:25 pm	**A Review of the Published Data Documenting Delays in Diagnosis and the Consequences in Terms of Later Stage Diagnosis and Poorer Outcomes** Whitney F. Jones, MD, Gastro & Endo Associates
12:25 pm–12:35 pm	**Overview of the Continuum of Providers Who Interact with Patients Prior to and Up to A Diagnosis** Chelsea Boet, MD, Spectrum Health Medical Group
12:35 pm–12:45 pm	**Lessons Learned: What Have We Learned from Past Public Health Success Stories?** Jennifer Brown, PhD, NYC Department of Health & Mental Hygiene
12:45 pm–12:55 pm	**Lessons Learned: What Have We Learned from Past Public Health Success Stories?** Tony Foleno, Senior Vice President, Strategy & Evaluation, Ad Council; President, Society for Health Communication

EAO-CRC 2019

12:55 pm–1:05 pm	**Introduction of the EAO-CRC National Clinical Alert and Symptoms and Signs Index** Andrew Albert, MD, MPH, Chicago Gastro LLC. Erin Peterson, Colon Cancer Coalition • Provider Education Outreach Initiatives • Patient Awareness and Advocacy Initiatives
1:05 pm–1:20 pm	**Q&A Panel Discussion–Strategic Plan Development**
1:20 pm–2:45 pm	**SESSION IV: Timely, Effective, Quality of Life & Fertility Preserving State of the Art Treatment (Addressing Gap 3)**
1:20 pm–1:30 pm	**Updates on Current Medical Oncology Approaches to Young-Onset CRC** Andrea Cercek, MD, Memorial Sloan Kettering Cancer Center
1:30 pm–1:40 pm	**Optimal Preservation of Fertility** Nicole Noyes MD, Reproductive Endocrinologist, Northwell Health
1:40 pm–1:50 pm	**Novel Approaches to Metastatic Mismatch Repair (MMR) Deficient and Microsatellite Stable (MSS) Metastatic Colorectal Cancer** Cathy Eng, MD, FACP, FASCO, the University of Texas MD Anderson Cancer Center

1:50 pm–2:00 pm	**From "Bench to Bedside" CRC Experimental Therapeutics and Phase I & II Trials. What's New & What's Next?** Wasif M. Saif, MD, Northwell Health Cancer Institute
2:00 pm–2:10 pm	**GAPS in Providing Palliative Care and the Cost Benefit Ratio for Hospital Systems** James T. D'Olimpio, MD, FACP, FAAHPM, Northwell Health Cancer Institute
2:20 pm–2:35 pm	**Identifying the Key Elements of a Center for Early Age Onset Colorectal Cancer – Panel Discussion** Eric Reddy, Stage IV Colorectal Cancer Survivor Andrea Cercek, MD, Memorial Sloan Kettering Cancer Center Zana Correa, NP, Memorial Sloan Kettering Cancer Center Kimmie Ng, MD, MPH, Dana-Farber Cancer Institute Karen Fasciano, PsyD, Dana-Farber Cancer Institute Christine L. Sardo Molmenti, MPH, PhD Feinstein Institute for Medical Research/ Donald and Barbara Zucker School of Medicine at Hofstra/ Northwell Thomas K. Weber, MD, FACS, Northwell Health, Colon Cancer Foundation Krista Nelson, LCSW OSW-C BCD FAOSW, Providence Cancer Institute, Providence St Joseph Health

3:00 pm–5:35 pm	**SESSION V: How Did this Happen? Investigating the Causes of Early Onset Colorectal Cancers (EAO-CRC) (Addressing Gap 4)**
	The Genetics of Heritable CRC: What's New and Important to Know Regarding the Genetics of EAO-CRC? Noah D. Kauff, MD, Duke Cancer Institute, Duke University Health System Thomas K. Weber, MD, FACS, Northwell Health, Colon Cancer Foundation Susan Wysoki, APR, CRC Advocate
3:10 pm–3:20 pm	**Prevalence and Spectrum of Germline Cancer Susceptibility Gene Mutations Among Patients with Early-Onset Colorectal Cancer** Heather Hampel, MS, LGC, the Ohio State University Comprehensive Cancer Center
3:20 pm–3:30 pm	**Molecular Subtype of Colorectal Cancer Associated with Early Age of Onset** Xavier Llor, MD, PhD, Yale University School of Medicine Smilow Cancer Center

3:30 pm–3:40 pm	**Germline Genetic Variants Associated with Young-Onset Colorectal Cancer: the MSKCC Experience** Zsofia K. Stadler, MD Clinical Director, Clinical Genetics Service, Memorial Sloan Kettering Cancer Center
3:40 pm–3:50 pm	**Germline Genetic Features of Young Individuals with Colorectal Cancer** Elena M. Stoffel MD MPH, Director Cancer Genetics Clinic, University of Michigan
3:50 pm–4:00 pm	**Cancer Susceptibility Gene Mutations in Individuals with Colorectal Cancer** Matthew B. Yurgelun MD, Dana-Farber Cancer Institute, Harvard Medical School

What is Driving the Increases in EAO-CRC, 80+% of Which is Not Related to the Named Hereditary CRC Syndromes ?

3:50 pm–4:00 pm	**Obesity, Sedentary Behaviors, and Early-Onset CRC** Yin Cao, MPH, ScD, MPH, Washington University School of Medicine
4:00 pm–4:10 pm	**New Suspects: Diet, Microbiome, Immunology and Cancer Risk** Semir Beyaz, PhD, Cold Spring Harbor Laboratories

4:10 pm–4:20 pm **New Research Information: Current Efforts to Investigate the Causes of Increases in MSS CRC Among Young Adults**

- **The United States**
  - Current NCI Funded Investigations into the Causes of Early Age Onset Colorectal Cancer:
    - ◊ *Colorectal Cancer Risks in People < 50 Years of Age NIH (RO3): Epidemiology, Richard Hayes, DDS, PhD, MPH, the Cancer Institute at NYU Langone*

4:20 pm–4:30 pm

- ◊ *Presentation Early Life Risk Factors and Risk of Colorectal Neoplasia, Kana Wu, MD, PhD, Harvard T.H. Chan School of Public Health, Dana-Farber, Harvard Cancer Center*

4:30 pm–4:40 pm **The European Union: Funded Investigations**

- ◊ *European Organization for Research and Treatment of Cancer (EORTC): Young Onset CRC: Causation, Treatment and Outcomes, Irit Ben-Aharon, MD, PhD, Rambam Health Care Campus, Haifa, Israel European Organisation for Research and Treatment of Cancer*

4:40 pm–4:50 pm

- ◊ *European study of Early-onset Colorectal Cancer (EUREOC): A Collaborative Study of the Biology of Young Onset CRC, Jose Perea, MD, PhD, Fundacion Jimenez Diaz University Hospital, Madrid, Spain*

4:50 pm–5:00 pm	**In Development:** • **CRAYON: ColoRectal Cancer in Adults at Young ONset: New York City Based Prospective Accrual Study of Young Onset Colorectal Cancer** Steven H. Itzkowitz MD, Icahn School of Medicine at Mount Sinai
5:00 pm–5:10 pm	**The Beyond CRC Project** Kimmie Ng, MD, MPH, Dana-Farber Cancer Institute
5:10 pm–5:20 pm	**The Search for Novel Drivers of Young Onset MSS CRC: An Overview of Current NIH, CDC and ACS Efforts** Thomas K. Weber, MD, FACS, Northwell Health
5:20 pm–5:30 pm	**Report Back from Denver EAO CRC Research Meeting** Heather Hampel, the Ohio State University Comprehensive Cancer Center
5:30 pm–5:45 pm	**Discussion and "Next Steps"**
5:45 pm–6:45 pm	**Poster Session and Reception**

FRIDAY, MAY 3, 2019

8:00 am–9:00 am	**REGISTRATION AND BREAKFAST WITH THE EXPERTS, PATIENTS AND THEIR FAMILIES** Krista Nelson, LCSW OSW-C BCD FAOSW Karen Fasciano, PsyD, Dana-Farber Cancer Institute
9:00 am–9:05 am	**WELCOME BACK!** Course Co-Director Wasif M. Saif, MD, MBBS, Northwell Health Cancer Institute
9:00 am–9:05 am	**HOUSEKEEPING** Course Co-Director Susan Peterson, PhD, MPH, The University of Texas MD Anderson Cancer Center

9:05 am–10:05 am	**SESSION VI: Palliative Care: Why Early is Best. (Including Guidance, Support and Resources to Patients and Caregivers During Their Treatment Journey/Continuum of Care (Addressing Gap 5)** James T. D'Olimpio, MD, FACP, FAAHPM, Northwell Health Cancer Institute Sarah Debord, Colon Cancer Coalition Andy Esch, MD, MBA, Palliative Care and Survivorship of Western New York Karen Fasciano, PsyD, Dana-Farber Cancer Institute Susan Pfau, MA, Family Innovations and Wilder Foundation Krista Nelson, LCSW OSW-C BCD FAOSW
10:05 am–10:25 am	**SESSION VI: Epigenetics and its Future Role in the Diagnosis and Treatment of Individuals More Specifically and Accurately** C. Richard Boland, MD, AGAF, UC San Diego

10:25 am–10:45 am	**Networking, Coffee, Poster Viewing Break**
10:45 am–11:20 pm	**STRATEGIC PLANNING SESSION** **(Breakout Groups According to Gap)** 1. **Data, Accurate, Regular to Measurement of Key Metrics** 2. **Family History Ascertainment** 3. **Earliest Possible Stage Diagnosis** 4. **Development of Centers of Excellence Dedicated to the Treatment of EAO CRC Patients and Caregivers** 5. **Research into the Causes of Early Onset Colorectal Cancers**
11:20 am–11:45 pm	**REPORT BACK FROM STRATEGIC ACTION PLAN BREAKOUT GROUPS** **THE EAOCRC PLEDGE**
11:45 pm–12:15 pm	**ABSTRACT POSTER SESSION AWARDS** **CLOSING REMARKS**

FACULTY

DENNIS J. AHNEN, MD

For the last 30 years, Dr. Dennis Ahnen has been an active clinician, educator and investigator in the Gastroenterology Division of the University of Colorado School Of Medicine. His research interests have focused on the biologic understanding and prevention of colorectal cancer. His basic science laboratory has focused on colorectal cancer biology and mechanisms of chemoprevention by non-steroidal anti-inflammatory drugs, his clinical laboratory group has conducted numerous colorectal cancer screening and chemoprevention trials, and his behavioral group has focused on interventions to improve colonoscopic screening in high-risk colorectal cancer families. Clinically, Dr. Ahnen is a Co-Founder of the Hereditary Cancer Clinic at the University of Colorado Hospital and Director of the Genetics Clinic at Gastroenterology of the Rockies. He retired from his Veterans Administration faculty position in October, 2014, and is now Professor Emeritus in the Gastroenterology Division at the University of Colorado School of Medicine. Dr. Ahnen is a member of the Colorado Comprehensive Cancer Center where he continues to work with junior faculty and fellows. He is also working with Gastroenterology of the Rockies to implement a CRC prevention program seamlessly into their practice.

ANDREW ALBERT, MD, MPH

Dr. Andrew Albert is the Medical Director of Digestive Health at Advocate Illinois Masonic Medical Center, Chicago. Dr. Albert received the Grand Prize for the 2017 80% by 2018 National Achievement Awards from the National Colorectal Cancer Roundtable (NCCRT) for his leadership in increasing colorectal cancer screening rates at his institution. Dr. Albert's mission Health System has achieved a greater than 80% screening rate. Realizing that traditional messaging around colon cancer prevention was not enough, Dr. Albert launched the social media campaign, #backoffcoloncancer, in 2017. Within a few weeks, this grass-roots approach became a worldwide movement with thousands of people joining the campaign. He was recently honored for this work as one of 20 Most Inspiring Chicagoans by StreetWise Magazine. Dr. Albert is a leader on the NCCRT Hospital and Health System Advisory Board and leads best practices in colorectal cancer screening across the country. He has published extensively and has presented at numerous conferences, and has collaborated with many colorectal cancer screening advocates across the country. He has also held numerous community and corporate events to bring the messaging to those who need it most. Dr. Albert attended Brandeis University and received his Medical and Masters in Public Health Degrees at the George Washington University Medical Center. He became Chief Resident during his residency at Boston University Medical Center and completed his fellowship in Gastroenterology & Hepatology at Loyola University Medical Center. Dr. Albert has also completed advanced training at the University of Chicago.

RICHARD BARAKAT, MD

Dr. Richard Barakat is an internationally recognized surgeon and clinical investigator who was Chief of the Gynecology Service at Memorial Sloan Kettering from 2001 to 2013 and held the Ronald O. Perelman Chair in Gynecologic Surgery. Dr. Barakat was the lead investigator on several influential research projects at MSK, including a study to compare the benefits of laparoscopic versus standard surgery for patients with endometrial cancer, a study evaluating symptomatic lower-extremity lymphedema in women treated for uterine corpus cancer, and a study testing the efficacy of the Gynecologic Cancer Lymphedema Questionnaire in detecting lower-extremity lymphedema symptoms. Dr. Barakat is author or co-author of more than 340 peer-reviewed articles and numerous textbook chapters and is also an editor of a surgical atlas on gynecologic cancer and of the latest edition of Principles and Practice of Gynecologic Oncology, one of the leading texts in the field.

IRIT BEN-AHARON, MD, PHD

Dr. Irit Ben-Aharon is the Director of the Oncology Division at Rambam Health Care Campus, the largest cancer center in northern Israel, located in Haifa. She is an Associate Professor in the Department of Oncology, Faculty of Medicine, Tel-Aviv University. Dr. Ben-Aharon completed the MD-PhD joint program of Tel-Aviv University and the National Institute of Health's (NIH) and was awarded her PhD in developmental biology in 2004 and her MD at 2005. Dr. Ben-Aharon completed oncology residency at Davidoff Center, Rabin Medical Center in 2011, followed by a fellowship in oncofertility at the Dana-Farber Cancer Center in Boston (2010-2011), and a fellowship at Memorial Sloan Kettering Cancer Center, New York as a Fulbright scholar in 2014-2015 focused on gastrointestinal malignancies and young-onset cancer. Dr. Ben-Aharon returned to Israel in 2015, and led the gastrointestinal oncology at Rabin Medical Center. In 2018, she was appointed as the director of the division of oncology at Rambam Health Care Center.

SEMIR BEYAZ, PHD

Dr. Semir Beyaz' long-term research interests involve the development of a comprehensive understanding of how cancer immune recognition and response pathways are perturbed in response to diet. During his graduate training, Dr. Beyaz developed significant expertise in the assessment of epigenetic, transcriptional and metabolic mechanisms that control cellular fate during cellular differentiation or in response to diet. As a Principal Investigator at Cold Spring Harbor Laboratory, he focused on dissecting the mechanisms of how pro-obesity diets alter immunity in the intestine and impact intestinal tumor initiation, progression, response to therapy, and whether such changes are reversible.

CHELSEA BOET, MD

Dr. Chelsea Boet is an alumnus of Kalamazoo College and Wayne State University School of Medicine. Dr. Boet did her internal medicine and pediatrics residency in Grand Rapids, MI at Spectrum Health and Helen DeVos Children's hospital. Dr. Boet now practices primary care internal medicine and pediatrics in Grandville, MI. She was diagnosed with stage IV colorectal cancer in 2018. She has an incredibly supportive husband, Pete, and 2 beautiful children, Lillian (age 4) and Oliver (age 15 months).

C. RICHARD BOLAND, MD, AGAF

C. Richard (Rick) Boland, MD, AGAF, is a gastroenterologist and Professor of Medicine at the University of California San Diego School of Medicine. He was born and raised in upstate New York, received a B.A. from The University of Notre Dame and an MD from Yale Medical School. He has a career-long research interest in colon cancer, specifically focusing on the genetic causes of colon cancer and familial cancer syndromes.

Dr. Boland started studying familial colorectal cancer as a medical student, and wrote an MD thesis proposing a novel familial aspect of the disease. After clinical training (and two years as a general medical officer in the Indian Health Service), he resumed research with Young S. Kim, MD, at UCSF, studying glycoprotein biochemistry in colorectal cancer. At the University of Michigan, he continued work on cancer-associated glycoprotein alterations, but in 1990, he redirected his focus to the molecular genetics of colorectal cancer following a sabbatical in the Howard Hughes Medical Institute, at which time he resumed work on the hereditary colorectal cancer disease, which he named "Lynch Syndrome." He was among the first gastroenterologists to explore "microsatellite instability" in cancer, and his laboratory developed the first in vitro

Dr. Boland has been an active clinician and teacher. He has been funded continuously by NIH since 1979, has served on multiple NIH (and other) Study Sections and was the chair of the Clinical Integrative Molecular Gastroenterology Study Section from 2014 to 2016, and was on the Multisociety Task for on Colorectal Cancer from 2012-18. He has published about 400 papers, has an H-Index of 89, and has written authoritative chapters for several textbooks of Internal Medicine, Gastroenterology and Genetics. He was elected into the Association of American Physicians in 2001. Dr. Boland was president of the American Gastroenterological Association (AGA) from 2011-2012, was given the AGA Oncology Section Distinguished Mentor Award, the AGA Beaumont Prize for his research in 2015, and the AGA Friedenwald Medal in 2016.

JENNIFER J. BROWN, PHD

As Assistant Director of the Cancer Prevention and Control Program at the New York City Department of Health, Dr. Brown's experience includes public health research, cancer prevention, and publications. As a digital editor and writer, her skills also include communications, health and science journalism, outcomes research, medical education, grant writing, and publication.

A senior editor at EverydayHealth.com, a health site, she sets editorial strategy and managed a team of freelance writers, creating preventive health content to empower readers.

YIN CAO, SCD, MPH

Ms. Yin Cao is a cancer epidemiologist focusing on risk prediction, screening and early detection, and chemoprevention of gastrointestinal malignancies. Her research in colorectal, prostate, and breast cancers have produced over 60 original research papers, including 25 first-/senior-author papers and 2 book chapters.

Her major contributions to cancer risk prediction include the development of the first absolute risk assessment tool for high-risk adenoma that could provide guidance for colorectal cancer (CRC) screening (International Journal of Cancer, 2015). I also developed a user-friendly prediction model of breast cancer for younger women who are not recommended for routine mammography (submitted).

Cancer chemoprevention is Ms. Cao's other focus. Utilizing two large prospective studies, she reported the full constellation of potential benefits of long-term aspirin use in overall cancer prevention (JAMA Oncology, 2016). Her work also provided the first population-based evidence for the role of host immunity in mediating the benefits of aspirin in CRC chemoprevention (Gastroenterology, 2016).

ANDREA CERCEK, MD

Dr. Andrea Cercek is a board-certified medical oncologist who specializes in the treatment of patients with gastrointestinal cancers, particularly colorectal and appendix cancer, and those with peritoneal mesothelioma. She specializes in both systemic chemotherapy and regional

chemotherapy given directly into the liver or the peritoneal cavity. Her research focus is on the development of new therapies for patients, including molecular-based therapies to improve the outcomes for patients with metastatic disease.

ZANA CORREA, NP, BC

Ms. Zana Correa is an American Nurses Credentialing Center board certified nurse practitioner with 17 years of experience in outpatient gastrointestinal oncology in the departments of surgery, medicine, and survivorship at Memorial Sloan-Kettering Cancer Center. As a nurse practitioner with the Colorectal Survivorship Program, Ms. Correa manages an independent practice caring for colon, rectal and anal cancer survivors. She has presented nationally at conferences including the Oncology Nursing Society and American Society of Colorectal Surgeons annual conference. She co-facilities a support group for colorectal cancer survivors and is on the survivors' newsletter committee at Memorial Sloan-Kettering. Ms. Correa serves as an adjunct clinical instructor in the Department of Graduate Nursing at New York University.

SARAH DEBORD

Ms. Sarah DeBord was diagnosed with metastatic colon cancer at age 34. In the 7-plus years since, she has turned her diagnosis into a calling, and become an advocate for other young adults diagnosed with colorectal cancer and parents with young families facing cancer. Ms. DeBord works as a communications and program manager for the Minneapolis-based Colon Cancer Coalition, is a contributing writer for CURE Magazine, volunteers her time with the online patient-led support community COLONTOWN, and blogs about her often adventurous experiences of living with chronic cancer at ColonCancerChick.com.

ANDREW E. ESCH, MD, MBA

Dr. Andrew Esch is a palliative care specialist and consultant focusing on improving the quality of life for patients and their families as they face serious or life-threatening illness through pain and symptom management, coordination of care, and education. Dr. Esch earned his medical degree from the University of Buffalo, where he also earned a combined bachelor of science and master of business administration degree. Currently he is a consultant and faculty member for the Center to Advance Palliative Care (CAPC), and serves as medical director at the Hospice of Orleans in Albion, New York. Prior to joining CAPC, Dr. Esch worked at the Lee Memorial Health System in Fort Myers, Florida, as medical director of palliative care. He has worked in both New York and Florida as a staff physician, a hospice physician, an assistant clinical professor of internal medicine and palliative care.

GREGORY FEERO, MD, PHD

Dr. Gregory Feero attended the University of Pittsburgh School Of Medicine and graduated with an M.D., Ph.D. (Human Genetics) in 1998. He then completed his medical training at the Maine-Dartmouth Family Medicine Residency in Augusta, Maine. After five years on the faculty of the Maine-Dartmouth Family Medicine Residency, he accepted a position at the National Human Genome Research Institute, National Institutes of Health, where he was a senior advisor to the director, and branch chief of the Genomic Healthcare Branch in the Office of Policy, Communication and Education, Office of the Director. In 2009 he returned to Maine. Dr. Feero currently serves as a consultant to the Jackson Laboratory on education issues, is an associate editor for the Journal of the American Medical Association and serves on the National Academies

TONY FOLENO

Mr. Tony Foleno serves as Senior Vice President, Strategy and Evaluation at the Ad Council. In this role, Mr. Foleno advises the strategic planning of more than 35 public service communications campaigns. He also oversees campaign evaluation, establishing key performance indicators and the tools through which they are measured. Mr. Foleno leads cross-campaign analyses designed to optimize Ad Council initiatives, and helps lead Ad Council Edge, a strategic consultancy advising nonprofit and corporate clients. His primary role is to leverage research-based insights into action, helping to ensure that the Ad Council remains a results-driven organization with a single-minded focus on making an impact in people's lives. Prior to joining the Ad Council in 2002, Mr. Foleno managed projects at Public Agenda, a nonpartisan public opinion research organization. He presently serves as 2018-2020 President of the Society for Health Communication, and is an active member of the Advertising Research Foundation, the American Evaluation Association, the 4As, and AAPOR, and serves on the steering committees for Agents of Change, the Market Research Council, and the Fishlinger Center for Public Policy and Research. He is a graduate of Swarthmore College and holds a MA in Sociology from Columbia University.

HEATHER HAMPEL, MS, CGC

Heather Hampel completed her Bachelor of Science degree in Molecular Genetics at the Ohio State University in 1993. She attained her Master's degree in Human Genetics from Sarah Lawrence College in 1995. She received certification from the American Board of Genetic Counseling in 1996. She worked as a cancer genetic counselor at Memorial Sloan- Kettering Cancer Center before moving to The Ohio State University Comprehensive Cancer Center (OSUCCC) in 1997.

Currently, Heather is a Professor in the Department of Internal Medicine and Associate Director of the Division of Human Genetics. She is also the Associate Director of Biospecimen Research for the OSUCCC. She was the study coordinator for the Columbus-area Lynch syndrome study which determined the frequency of Lynch syndrome among newly diagnosed patients with these cancers. This study culminated in first author publications in the New England Journal of Medicine in May of 2005, Cancer Research in August of 2006, and the Journal of Clinical Oncology in December of 2008. She is now the PI of the Ohio Colorectal Cancer Prevention Initiative which is screening colorectal cancer patients from 50 hospitals throughout the state for hereditary cancer syndromes. The first major publication from that study showing that 16% of early-onset colorectal cancers are hereditary was published in 2017 in JAMA Oncology. Heather Hampel was the Region IV Representative on the Board of Directors of the National Society of Genetic Counselors in 2003-4. She was on the Board of Directors for the American Board of Genetic Counseling from 2006-2011, serving as President in 2009 and 2010. She was elected to the Steering Committee member of the National Colorectal Cancer Roundtable in 2016. She has been on the Council of the Collaborative Group of the Americas on Inherited Colorectal Cancer since 2016 and served as President in 2018.

RICHARD B. HAYES, DDS, PHD

Dr. Richard Hayes is a Professor in the Departments of Population Health and Environmental Medicine at New York University School of Medicine. Dr. Hayes has more than 30 years of experience in designing and carrying out epidemiologic investigations on cancer, including the successful execution of case-control and cohort studies in national and international settings. His past research on the etiology of colorectal cancer has involved investigations

of diet, anthropometric factors, and genetics, and, most recently, the human microbiome. His current research involves risk prediction modeling for colorectal cancer, with the purpose determining the appropriate age for beginning colorectal cancer screening, based on genetic and environmental risks. This research also involves identification of differentials for genetic and environmental risk for those younger than age 50 years and older individuals.

WES HENSEL

Mr. Wes Hensel was diagnosed with stage 3 rectal cancer at age 34 during a colonoscopy, after 4 years of being misdiagnosed with hemorrhoids due to rectal bleeding and being "too young" for anything else. After diagnosis, tumor tissue testing on mismatch repair protein expression and subsequent germline genetic testing found that Mr. Hensel had a MLH1 gene mutation for Lynch Syndrome, despite no family history of colorectal cancer. After extensive treatment with radiation and chemotherapy, Mr. Hensel underwent abdominoperitoneal resection with permanent colostomy at MD Anderson Cancer Center, performed by Dr. Nancy You, followed by additional chemotherapy completed in November, 2018. Now age 36, Mr. Hensel was declared "no evidence of disease" in December, 2018. He has a passion for educating others about early-onset colorectal cancer, and for promoting earlier screening, including colonoscopies as a first line of defense when symptoms arise in younger patients. He also is passionate about promoting healthy eating and fitness for cancer prevention and overall health. Mr. Hensel works as a systems engineer in the aerospace industry, and lives with his beautiful wife and 2 lovely children in Tucson, Arizona.

STEVEN H. ITZKOWITZ, MD, FACP, FACG, AGAF

Dr. Steven Itzkowitz is Professor of Medicine and Oncological Sciences, and Director of the GI Fellowship Program at Icahn School of Medicine at Mount Sinai. His research has focused on reducing disparities in colon cancer screening in the general population, developing new non-invasive stool DNA tests to screen for colon cancer, and detecting and preventing colon cancer in inflammatory bowel disease. At the national level, Dr. Itzkowitz is a current member of the Steering Committee of the National Colorectal Cancer Roundtable and a former Chair of the Gastrointestinal Oncology Section of the American Gastroenterological Association. In New York City, he is a former President of the New York Gastroenterological Association and a founder of the New York Crohn's and Colitis Organization (NYCCO). He is immediate past Co-Chair of the New York Citywide Colon Cancer Control Coalition (C5 Coalition) and current Co-Chair of the C5 Coalition Screening Guidelines Committee. At Mount Sinai, since 2000 he has been instrumental in developing and running the institution's colon cancer screening program among minority populations in East Harlem. His team at Mount Sinai was among the first in the nation to demonstrate the effectiveness of patient navigation to enhance screening colonoscopy adherence, proving also that patient navigation is cost effective. He is the founder and Medical Director of the Mount Sinai CO-CARE Registry for patients and their relatives who are at high risk for colon cancer. He is currently organizing a multi-center prospective study of risk factors for Early Onset CRC among several NYC-area academic medical centers.

WHITNEY JONES, MD

Dr. Whitney Jones is a practicing Gastroenterologist, former therapeutic endoscopist and Clinical Professor at the University of Louisville from 1994 until 2017.

In 2003 he founded the Colon Cancer Prevention Project, a state based, nation leading information and advocacy organization. Through the leadership of Colon Cancer Prevention Project and its many partners, Kentucky has more than doubled its screening rates, cut colon cancer mortality by third, and passed into law the lowest barriers for CRC screening of any state.

Since 2016, Dr. Jones has implemented systematic hereditary cancer risk assessment and point of service genetic panels testing in both the office and endoscopy platforms to both prevent and better manage the cancer risks of affected and unaffected patients.

JORDAN KARLITZ, MD

Dr. Jordan Karlitz graduated from the University of California at Berkeley with a degree in molecular biology and genetics. He subsequently attended the McGill University Faculty of Medicine in Montreal where he received his medical degree. He received his internal medicine training at the Columbia University College of Physicians and Surgeons/New York Presbyterian Hospital and completed his fellowship in gastroenterology and hepatology at the Albert Einstein College of Medicine/Montefiore Medical Center.

NOAH D. KAUFF, MD

Dr. Noah Kauff is Director, Clinical Cancer Genetics at Duke Cancer Institute in Durham, North Carolina. Dr. Kauff is a gynecologist and geneticist who specializes in the care of patients who may have an inherited predisposition to cancer. His research interests include: a) analyzing the effect of genetic risk markers on the assessment and treatment of individuals with an inherited predisposition to cancer; b) evaluating methods for incorporating genetic risk assessment into the routine care of oncology patients; c) characterizing the efficacy of risk-reducing strategies

performed for the prevention of inherited cancers; and d) elucidating differences between inherited and sporadic cancers to assist in the development of targeted therapies for hereditary malignancies.

SAYONI LAHIRI, MS, CGC

Ms. Sayoni Lahiri is a board-certified genetic counselor at the University of Texas Southwestern Medical Center in Dallas. Prior to joining UT Southwestern in 2015, Ms. Lahiri completed her Master of Science degree in genetic counseling at Northwestern University and practiced in Orange, California. In addition to providing genetic counseling for patients at risk for hereditary cancer at multiple UT Southwestern clinics, she is also grant coordinator and oversees two of the department's population grants that focus on expanding access to genetic counseling and testing services to the underserved population of north Texas. Ms. Lahiri oversees the implementation of a Cancer Prevention and Research Institute of Texas (CPRIT)- funded population screening program for Lynch syndrome at UT Southwestern and Parkland Hospital, and helped create a CPRIT grant-funded genetic patient navigator role to follow patients with Hereditary Breast and Ovarian Cancer syndrome (HBOC) and Lynch syndrome.

XAVIER LLOR, MD, PHD

Dr. Xavier Lior is Professor of Medicine, Medical Director, Cancer Screening and Prevention Program and Colorectal Cancer Prevention Program, and Co-director, Cancer Genetics and Prevention Program at Yale University School of Medicine. After obtaining his MD degree from the Autonomous University Barcelona, Dr. Llor trained in basic research and Internal Medicine at the University of Chicago and completed his GI fellowship at the University of Illinois at Chicago. He complemented his training with a PhD degree in molecular biology from the University of

JAN LOWERY, PHD, MPH

Dr. Jan Lowery is the Associate Director of Clinical Operations at the Colorado Center for Personalized Medicine. She earned her PhD in Analytical Health Sciences and Epidemiology from the University of Colorado. She is an Adjunct Associate Professor in the Department of Epidemiology at the Colorado School of Public Health.

CHRISTINE MOLMENTI, PHD, MPH

Dr. Christine Molmenti is an Assistant Professor and Cancer Epidemiologist in the Department of Occupational Medicine, Epidemiology and Prevention at the Northwell Health. Her research is focused on the primary and secondary prevention of colorectal cancer through screening/ early detection and lifestyle.

KRISTA NELSON, LCSW OSW-C BCD FAOSW

Krista Nelson is trained as an oncology social worker and works in clinical, research and program management roles within Providence Health and Services. Krista Most recently joined the Compassion team as a Program Manager, and has appreciated bringing her clinical expertise to work on creating supportive infusions of compassion to caregivers.

She provides individual support as well as group support for those affected with cancer and facilitates an online support group for women with metastatic cancer and runs a program for children with a parent with cancer.

Krista defines her role as providing support for people and their families throughout the cancer continuum, and sharing the expertise that she has learned from other patients with cancer. What she loves about working with those affected with cancer, "is being able to witness the grace, courage and life lessons of individuals dealing with cancer and the opportunity to be a part of their journey."

Krista is a past President of the board of directors of the Association of Oncology Social Work and past invited Director of the American Psychosocial Oncology Society. She loves being a part of the national discussion involving the psychosocial care of people with cancer. She has been a speaker at local and national conferences on issues of survivorship, palliative care, distress screening and children who have a parent with cancer. Krista also serves as an Invited Director on the board of directors of the National Accreditation Program for Breast Centers, In 2015, Krista was named as a finalist in the Schwartz Center Compassionate Caregiver of the year award and received and Innovation Award from the Association of Community Cancer Centers as well as was elected to their Board of Trustees in 2016.

Krista also has been a volunteer facilitator at retreats for women with breast cancer and at camps and programs that support grieving children. She also has volunteered annually on medical relief teams to Haiti since 2009.

KIMMIE NG, MD, MPH

Dr. Kimmie Ng has the expertise, training, leadership, and resources necessary to serve as Faculty in this program. She is a board-certified medical oncologist with MD and MPH degrees who specializes in the treatment and investigation of gastrointestinal malignancies. Dr. Ng's research program focuses on the identification of dietary, molecular, and genetic predictors of improved survival in colorectal cancer (CRC) patients. She has published extensively on the relationship between vitamin D status and survival of patients with CRC, and is now translating her findings into randomized clinical trials for patients. She has received multiple grants to support her work, including K07 and R01 awards evaluating vitamin D and inflammation in CRC, and served as Co-Project Leader of Project 2 in the Dana-Farber/Harvard Cancer Center (DF/HCC) SPORE in Gastrointestinal Cancer.

NICOLE NOYES, MD

Dr. Nicole Noyes competed her undergraduate and medical degree at the University of Vermont and then an OB-GYN residency and Reproductive Endocrinology fellowship at Weill-Cornell University School of Medicine. She has participated full-time in academic medicine in New York City ever since, first at Cornell, then at New York University (for 23 years) and now at Northwell Health, where she serves as System Chief for Reproductive Medicine. At NYU, she helped established the University's Fertility Preservation program, one that came to cryopreserve oocytes for more than 4,000 women and produced more than 125 babies using the technology. Dr. Noyes has also frozen oocytes for more than 250 cancer patients. She currently oversees all of Northwell Health's Fertility treatments, including its Fertility Preservation program and will be opening a state-of-the-art Fertility facility on East 64th Street this summer. She remains a consulting fertility preservationist at Memorial Sloan Kettering Cancer Center, has participated in fully-funded NIH research, authored over 60 peer-review manuscripts, given more than 75 guest lectures around the world, is involved with the training of reproductive endocrine fellows, was past chair of the American Society of Reproductive Medicine's Fertility Preservation Special Interest Group and continues to focus her research efforts on fertility preservation, early embryogenesis and human implantation.

JOSE PEREA, MD

Dr. José Perea is a Consultant Colorectal Surgeon and Associate Professor in the Surgery Department at Fundación Jiménez Díaz University Hospital, Madrid, Spain. Dr. Perea's clinical and research interests focus on surgery, gastroenterology and oncology, and in particular, understanding the basis of colorectal cancers with differential phenotypes. He coordinates a multicenter multidisciplinary group within Spain, as well as international collaborations, focused

in general and gastroenterological surgery from the General University Hospital Gregorio Marañón, Madrid, and his PhD (cum laude) from the University of Salamanca. He completed a specialization in clinical research Methodology at the National School of Health, Carlos III Institute, Madrid, and a master of molecular oncology degree from the Spanish National Oncological Research Center (CNIO). Dr. Perea is a member of the scientific committee for the Spanish Society of Coloproctology.

ERIN PETERSON

Ms. Erin Peterson is the Communications Director for the Colon Cancer Coalition where she works to reach the unscreened and underserved with the lifesaving messages of on time colorectal cancer screening. Prior to joining the Colon Cancer Coalition in 2011, Ms. Peterson spent ten years working for a marketing and public relations agency with national brands focusing on building partnerships and reaching consumers through unique marketing approaches.

SUSAN PFAU, MA

Ms. Susan Pfau is a mental health practitioner with Family Innovations and Wilder Foundation. She also serves as a Kid's Support Group facilitator at Gilda's Clubhouse Twin Cities. She earned her MA in Marriage and Family Therapy from Saint Mary's University in Minnesota and her BA in Family Studies from Metropolitan State of Minnesota. Ms. Pfau serves on the advisory board of the Colon Cancer Alliance.

REBECCA SIEGEL, MPH

Ms. Siegel conducts cancer surveillance research across the cancer continuum, from prevention to survivorship, to help inform evidence-based cancer prevention and control in the United States and worldwide. Her primary research interests are emerging trends in cancer occurrence, particularly early-onset colorectal cancer, and cancer disparities based on race, socioeconomic status, and geography.

DIANA SLOAN

Diana Sloan is originally from Chesapeake, Virginia, and is a graduate of James Madison University. She currently lives in Lakeway, Texas, with her husband of nineteen years and their three daughters. Diana was an English teacher until 2012 when she was diagnosed with stage IV colorectal cancer at the age of 38. She is currently incurable and in treatment. Diana now spends her free time making memories with her family and friends and enjoying what her husband aptly named, "The We Don't Wait" tour. She has also found a new passion in advocating for colorectal cancer patients, especially those diagnosed under 50.

ROBERT A. SMITH, PHD

Dr. Robert A. Smith is a cancer epidemiologist and Vice President, Cancer Screening at the National Office of the American Cancer Society (ACS) in Atlanta, Georgia. He also is Adjunct Professor of Epidemiology at the Rollins School of Public Health, Emory University School of Medicine, and an Honorary Professor, Centre for Cancer Prevention, Wolfson Institute of Preventative Medicine at Queen Mary University of London. His primary research interests are cancer epidemiology, evaluation of cancer prevention and early detection programs, quality assurance in the delivery of health services, and cancer rehabilitation and survivorship. He

received his PhD from the State University of New York at Stony Brook in 1983. Prior to joining the staff at the ACS, he held positions with the Boston University School of Public Health, and the Centers for Disease Control. At the ACS he leads the development of cancer screening guidelines, and special research and policy projects focused on cancer prevention and control. He is the author of over 300 peer-reviewed scientific articles, reports, and book chapters, and a frequent lecturer on cancer screening issues. He serves on many international and national government and professional advisory committees and working groups, and in 2017 was a member of the International Agency for Research on Cancer (IARC) Handbooks Working Group for volume 17 on Colorectal Cancer Screening. Dr. Smith was one of the founding members of the National Colorectal Cancer Roundtable, and has served as its Co-Director for 22 years. He also is a founding member of the National Lung Cancer Roundtable and the Principle Investigator of the first 3-year supporting grant. Among his honors, Dr. Smith is an Honorary Fellow of the Society of Breast Imaging; in 2004 he received the Cancer Prevention Laurel for Outstanding National Leadership from the Prevent Cancer Foundation; and in 2011 he received the Medal of Honor from the International Agency for Research on Cancer.

ZSOFIA STADLER, MD

Dr. Zsofia Stadler is a clinical and laboratory investigator with an interest in human cancer genetics with a focus on hereditary and early-onset gastrointestinal cancers. Her research focuses on the use of genomic approaches to improve the identification and characterization of known and novel cancer susceptibility genes for colorectal and pancreas cancers as well as a variety of other inherited cancers. In early-onset, but genetically unexplained cancer patients, her research focuses on the use of whole-genome and exome sequencing to identify novel de

novo or inherited mutations that may account for such early-onset malignancies. With tumor-normal DNA sequencing, her team recently demonstrated that high-frequency microsatellite instability predicts for the presence of germline mutations in the DNA mismatch repair genes, diagnostic of Lynch syndrome, across a broad spectrum of cancers. This suggests that Lynch syndrome is a much more heterogeneous disease than previously thought and any cancer patient harboring a tumor with micorsatellite instability should undergo genetic testing for Lynch syndrome.

ELENA M. STOFFEL, MD, MPH

Dr. Elena Stoffel is an Assistant Professor of Internal Medicine (academic tenure track) and an associate member of the Cancer Epidemiology and Prevention Group of the University of Michigan Comprehensive Cancer Center. Her clinical and research interests are pathogenesis, early detection and prevention of gastrointestinal cancers, with special focus on genetic factors. Her previous work, funded by a K07 Cancer Prevention, Control and Population Sciences Career Development Award from the National Cancer Institute, examined the impact of genetic risk assessment on health behaviors and clinical outcomes of individuals with inherited predisposition to colorectal cancer. In her current position at the University of Michigan, Dr. Stoffel serves as Director of the Cancer Genetics Clinic, and is principal investigator of the University of Michigan Cancer Genetics Registry and the Gastrointestinal Colorectal Biorepository. She has experience as principal investigator in research studies assessing utility of novel endoscopic and non-invasive technologies for early detection of colorectal neoplasia. Dr. Stoffel leads a multidisciplinary team dedicated to diagnosis and management of patients with hereditary cancer syndromes. She is a co-investigator on international collaborative research studies encompassing genetic epidemiology of GI cancers and clinical chemoprevention trials

for individuals with genetic predisposition for colorectal cancer. Dr. Stoffel is a past President of the Collaborative Group of the Americas on Inherited Colorectal Cancer, a member of the American Gastroenterological Association Nominating Committee for Gastrointestinal Oncology, and the American Society of Clinical Oncology (ASCO) Cancer Genetics Committee. She serves on the National Comprehensive Cancer Network Colon and Rectum Guidelines Committee, and the ASCO Gastrointestinal Cancer Advisory Panel (Cancer.net). Dr. Stoffel has led expert review panels on clinical guidelines for management of individuals with hereditary GI cancer syndromes.

MARY B. STRONG, MA,

Ms. Mary Strong is the Assistant Vice President of Continuing Medical Education at Northwell Health. She holds a Bachelor of Science Degree in Community and School Health Education from the Health Sciences Center, State University of New York at Stony Brook. Her Master of Arts Degree in Health Administration was earned from Hofstra University, Hempstead, NY. Mary is currently responsible for the oversight of Northwell Health CME program consisting of medical conferencing, regularly scheduled series, and enduring materials that are designed to accomplish the CME mission of Northwell Health. She has worked in the field of Continuing Medical Education since 1999 when she became Assistant Director of CME for North Shore-LIJ's Department of Professional and Public Health Education. Mary began her professional career as a health educator with the Long Island Diabetes Association where she was involved in community education initiatives. As a health educator for North Shore University Hospital, she planned and developed in-service and health education programs for school administrators, health personnel, faculty, parents and students. Additionally, she was responsible for the organization and implementation of a variety of large scale events, such

as health fairs and community wellness programs. Her years of experience in adult learning, education and program implementation have carried over to her work in continuing medical education. During her tenure as Director, the CME program of the North Shore LIJ Health System (now Northwell Health) achieved, and has maintained, the level of Accreditation with Commendation (2007-2013; 2013-2019), the highest level awarded to CME providers by the Accreditation Council for Continuing Medical Education (ACCME).

DENNELLE SURANSKI

Ms. Denelle Suranski born and raised in Pittsburgh, PA. She is an event coordinator for Allegheny County, Parks and Recreation division and currently enrolled in Carlow University pursuing a degree in Human Resources Management.

She is also stage II rectal cancer survivor diagnosed with Lynch Syndrome, MSH2. Denelle is a 2019 On the Rise model for the Colon Club and delighted to be a 2019 EAOCRC faculty member of Colon Cancer Foundation.

THOMAS K. WEBER, MD, FACS

Dr. Weber is Director of Surgical Oncology, Northwest Region, Northwell Health and Medical Co-Director of Cancer Genetics at Northern Westchester Hospital, Northwell Health. Through 2017, Dr. Weber was Academic Professor of Surgery at the State University of New York at Downstate. As Chief of Surgery at VA New York Harbor Health Care System, Brooklyn Campus Dr. Weber led major initiatives to improve operating room productivity, surgical quality improvement and enhanced multidisciplinary training and care for the surgical patient at the Brooklyn VA Medical Center. In addition, he successfully led multiple new innovations including the establishment of a genetic counseling service, Surgical Telemedicine, implementation of

a surgical simulation center, enhanced postoperative pain control templates and improved communication between surgical teams and waiting family members during extensive surgical procedures. To enhance quality assurance and surgical outcomes he designed an objective analytic analysis of response and completion times of ancillary service response to requests from the surgical service including radiology, cardiology and infectious disease. He also led the full integration of the Manhattan VA Surgical Service into the Brooklyn VA Medical Center following the Hurricane Sandy evacuation of all Manhattan VA patients and staff to the Brooklyn Campus on October 28th, 2012 and their return to Manhattan 6 months later in May 2013.

MATTHEW YURGELUN, MD

Dr. Matthew Yurgelun is a gastrointestinal medical oncologist at the Dana-Farber Cancer Institute affiliated with both the Gastrointestinal Cancer Center and the Cancer Genetics and Prevention Program. He has a longstanding special interest in studying the diagnosis, phenotypes, and management of patients with Lynch syndrome and other hereditary gastrointestinal cancer syndromes. His current research includes studying the benefits and limitations of using widespread multi-gene panel testing – rather than criteria-based targeted genetic testing – in the evaluation of patients at risk for hereditary cancer syndromes.

A Measure Of Titanium Dioxide

Commercial Product Analysis: Because of TiO_2's high levels in candy, children ingest more of the whitener than adults

By **Charlie Schmidt**

Sweet, Sweet Titanium
Candies contain high levels of the whitening compound titanium dioxide.
Credit: Glane23/Wikipedia

Used mainly as a whitening agent, titanium dioxide is a common additive in foods, paints, and personal care products. But scientists know little about how much TiO_2 appears in these products, and that lack of data hinders studies of the chemical's

Transcriptomics analysis reveals new insights in E171-induced molecular alterations in a mouse model of colon cancer.

Proquin H, et al. Sci Rep. 2018.
Show full citation

Abstract

Titanium dioxide as a food additive (E171) has been demonstrated to facilitate growth of chemically induced colorectal tumours in vivo and induce transcriptomic changes suggestive of an immune system impairment and cancer development. The present study aimed to investigate the molecular mechanisms behind the tumour stimulatory effects of E171 in combination with azoxymethane (AOM)/dextran sodium sulphate (DSS) and compare these results to a recent study performed under the same conditions with E171 only. BALB/c mice underwent exposure to 5 mg/kgbw/day of E171 by gavage for 2, 7, 14, and 21 days. Whole genome mRNA microarray analyses on the distal colon were performed. The results show that E171 induced a downregulation of genes involved in the innate and adaptive immune

Effect of microflora and lactose on the absorption of calcium, phosphorus and magnesium in the hindgut of the rat.

Andrieux C, et al. Reprod Nutr Dev. 1983.
Show full citation

Abstract

For 4 weeks, 3-month old germfree (GF) and conventional (CV) rats were given a semi-synthetic diet sterilized by irradiation with or without 10% of lactose. During the 5th week, 0.2% of titanium oxide (TiO2) was added to the diet and the rats were killed at regular intervals throughout the light/dark cycle. The patterns of TiO2 and 45Ca excretion were similar, indicating that TiO2 was a good marker of unabsorbed calcium transit. The apparent absorption coefficient of calcium, magnesium and phosphorus was determined in the ileum, caecum, large intestine and faeces by the mineral/TiO2 ratio. The effects of microflora and lactose varied with the mineral and the digestive tract level studied. --In the small intestine, microflora had no effect on the apparent absorption of calcium and magnesium but did

Food-grade TiO2 impairs intestinal and systemic immune homeostasis, initiates preneoplastic lesions and promotes aberrant crypt development in the rat colon.

Bettini S, et al. Sci Rep. 2017.
Show full citation

Abstract

Food-grade titanium dioxide (TiO2) containing a nanoscale particle fraction (TiO2-NPs) is approved as a white pigment (E171 in Europe) in common foodstuffs, including confectionary. There are growing concerns that daily oral TiO2-NP intake is associated with an increased risk of chronic intestinal inflammation and carcinogenesis. In rats orally exposed for one week to E171 at human relevant levels, titanium was detected in the immune cells of Peyer's patches (PP) as observed with the TiO2-NP model NM-105. Dendritic cell frequency increased in PP regardless of the TiO2 treatment, while regulatory T cells involved in dampening inflammatory responses decreased

FDA PROPOSAL ON
SAFE SUNSCREEN
MINERAL INGREDIENTS
Zinc oxide
Titanium dioxide
FDA'S NEW PROPOSALS ON DRUG STORE SUNSCREEN
SAYS 14 OF THE 16 INGREDIENTS MAY BE UNSAFE

DOES Natural= safety?

- There are several examples of naturally occurring ELEMENTS minerals and metals that are unsafe
- Aluminum, arsenic, cadmium, chromium, lead, mercury, nickel
- And oh by the way hemlock too...
- Just to name a few…
- We’ve looked at titanium dioxide but what about zinc oxide?
- That must be safe right?...

12. Sunscreens

Most sunscreens contain zinc oxide as a common ingredient. This produces free radicals that can damage the DNA and create room for growth of cancer. Benzophenone-3 is another cancer-causing chemical in sunscreens, which has the tendency to get absorbed in the body.

Exposure to ZnO nanoparticles induces oxidative stress and cytotoxicity in human colon carcinoma cells.

De Berardis B, et al. Toxicol Appl Pharmacol. 2010.
Show full citation

Abstract

Engineered nanoparticles offer great promise in many industrial and biomedical applications, however little information is available about gastrointestinal toxicity. The purpose of this study was to assess the cytotoxicity, oxidative stress, apoptosis and proinflammatory mediator release induced by ZnO nanoparticles on human colon carcinoma LoVo cells. The biological activity of these particles was related to their physico-chemical characteristics. The physico-chemical characteristics were evaluated by analytical electron microscopy. The cytotoxicity was determined by growth curves and water-soluble tetrazolium assay. The reactive oxygen species production, cellular glutathione content, changes of mitochondrial membrane potential and

Widespread
Use Late 90’s

Hooray We've Banned "X....sort of"

- One Molecule difference…
- Bpa was replaced with bps
- Brominated tris/chlorinated tris
- Sodium laurel sulfate replaced with sodi  fate
- Ddt was banned in 1972 and then roundup was introduced in 1974
- C8 was banned 10 years ago, 268 variations same chemical

A word about our chemical world

- There are over 80,000 + chemicals in commercial us
- no-pre market testing of chemicals
- CPG & Personal Care companies use loopholes in leg
- “trade Secrets” such as Fragrance/Artificial Flavors
- Chemicals Banned in EU or Other Countries/“GRAS”
- Toothless tiger

What Else was Going On?

- Widespread use of Glyphosate
- Used on over 93% of Soy and Corn Crops
- Used as a Desiccant Wheat/oats/Barley
- 18.9 billion Pounds since 1974
- 75% of that in last decade
- Over 70 crops sprayed

A Word About “BT Corn”

- Bt & Mechanism of Action (to Kill European corn borer)
- Corn crops are sprayed an average of 8x in the field
- BT Has 2 Classes of Toxins 1 of those is Crystal Delta Endotoxins
- Toxic mechanism is for these proteins to bind to receptors in the mid-gut
- Resulting in Rupture of those cells
- So what happens when WE eat ther

GMO Foods

For more information go to
olmag.co/gmo-foods

Tomato

Tomatoes have been genetically modified, but they are not being grown commerically at thia time

Rice

GMO rice has been approved but is not yet being used commercially

Sweet Corn

More than 70 percent of corn grown in the United States has been genetically engineered

Summer Squash

Farmers don't like GMO squash but some experts say GM squash have blended with wild squash

Salmon

GMO salmon has not been approved by the FDA, but it will be very soon

Canola Oil

87% of canola grown commercially, and 80% of wild canlola is GMO

Yeast

GMO yeast for wine has been approved

Alfalfa

GMO alfalfa is contaminating non GMO alfalfa crops at a rapid rate

Wheat

Unapproved GMO has contaminated wheat fields, and we don't yet know the extent of it

Sugar Beets

90% of Sugar Beets (used to make 50% of our sugar) are GMO

Soy

More than 93% of soybeans the United States produces are genetically modified

Peas

Peas have been genetically modified but are not approved or availlable

Hawaiian Papaya

Most Hawaiian papaya is GMO, even many organic crops are contaminated

Cotton

At least half of cotton grown in the world is GMO

organic lifestyle MAGAZINE

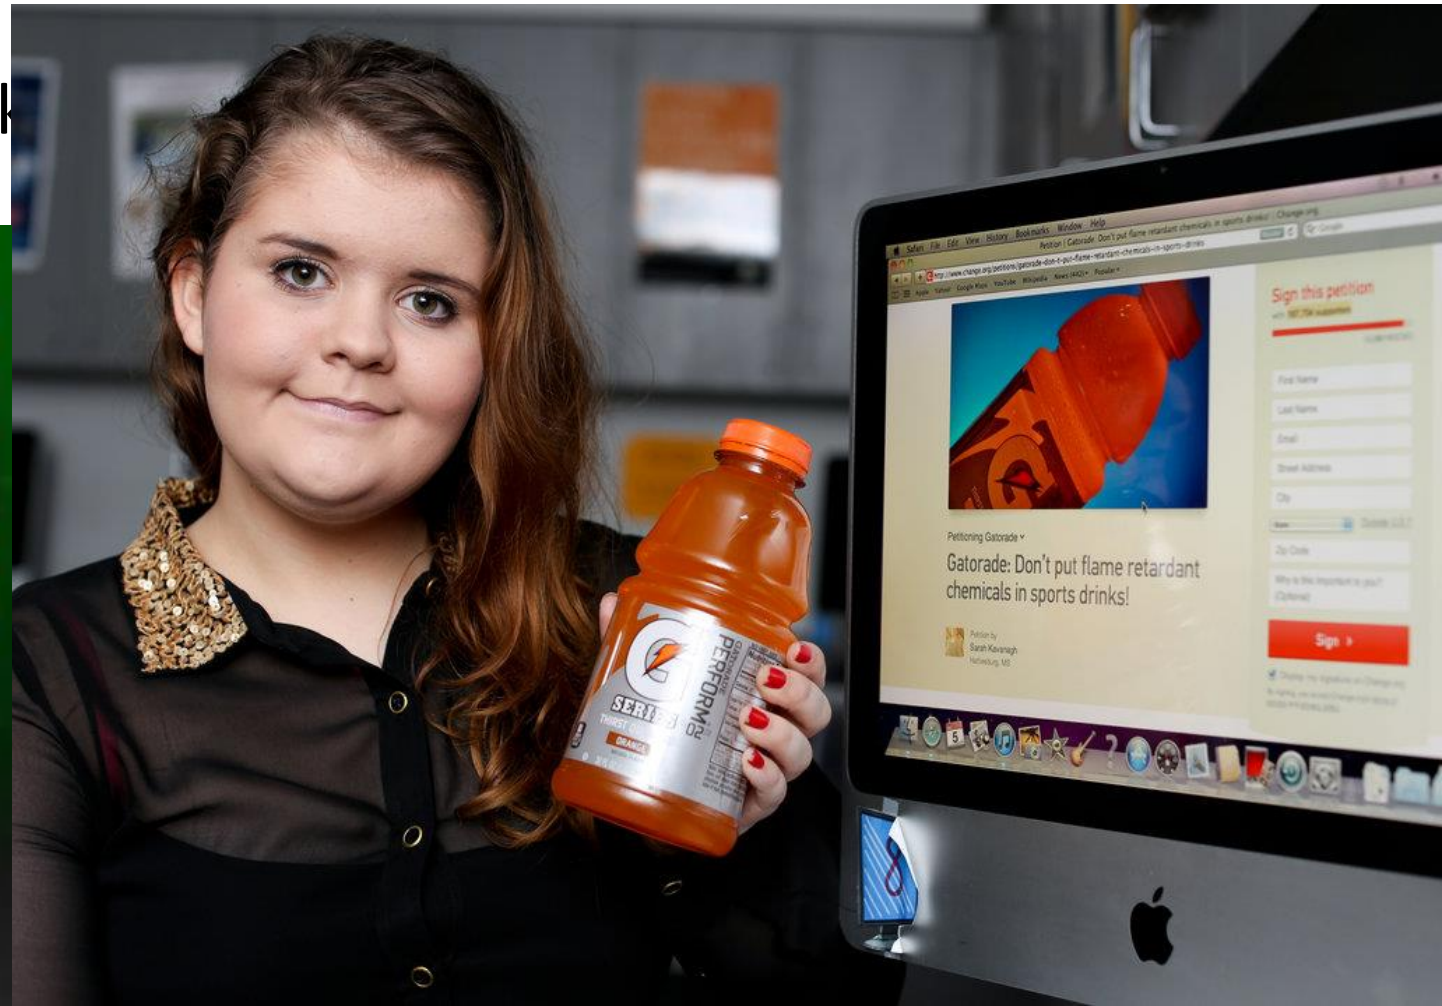
What else was going on?

- Boom of high fructose corn syrup
- Didn't consume sugary cereals
- Fruit drinks or sodas
- We did consume….

A Little “Paint Thinner” in Your Cereal?

A Little “Flame Retardant” in your sports drinks?

- BVO Common In Sports Drink



A word about those “Flame Retardants”

- Studies on the cytotoxicity of oganophosphate F
- show most severe effect on Caco-2 Colon Cance
- Relate directly to the Human Epithelial cell line
- Overproduced Reactive Oxygen species level
- Induced dna lesions & Increased ldh leakage
- Average home has more than 4 pounds
- U.S. babies have highest levels in the world
- Kids have 5x more than their parents

A Little “Cancer” in Your Daily Bread?

- Potassium Bromate Banned (and You were worried about the Gluten & Roundup)
- Class 2 B Carcinogen

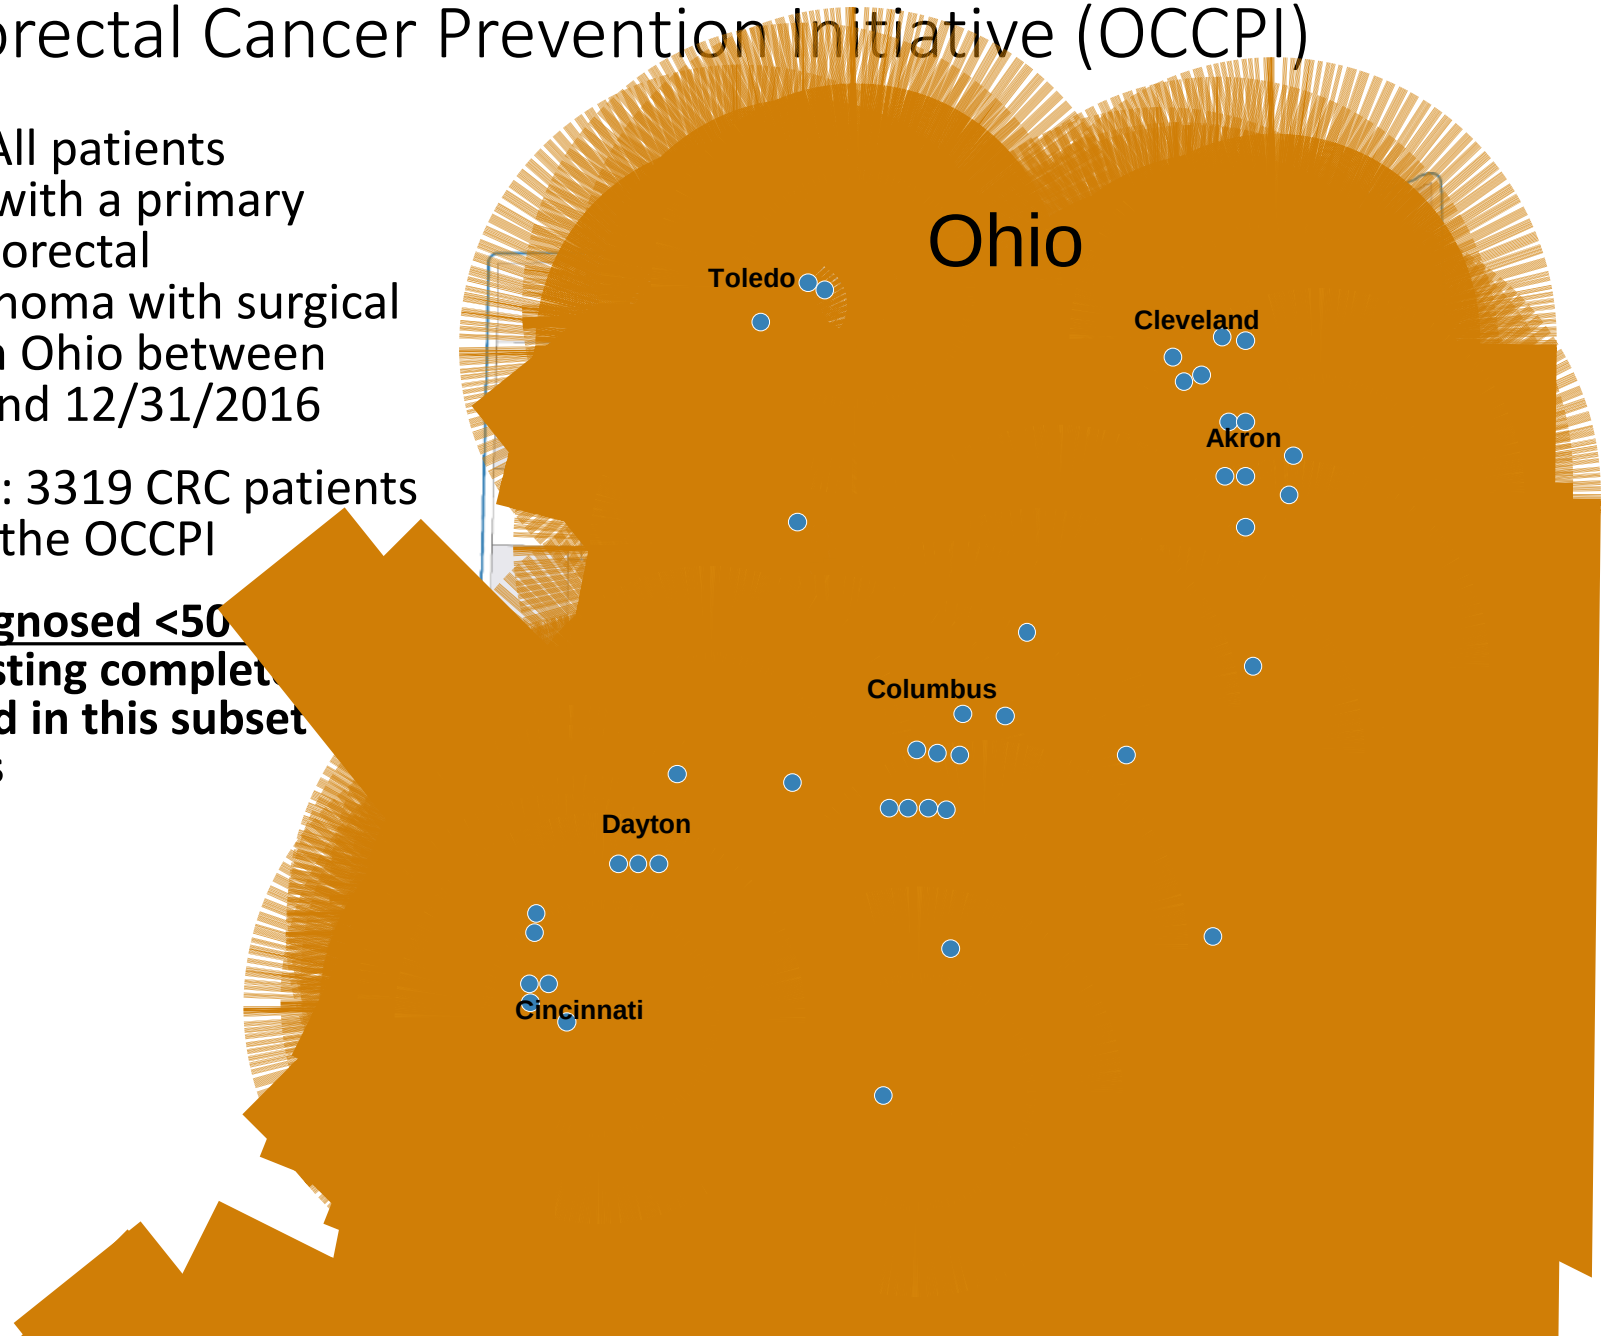
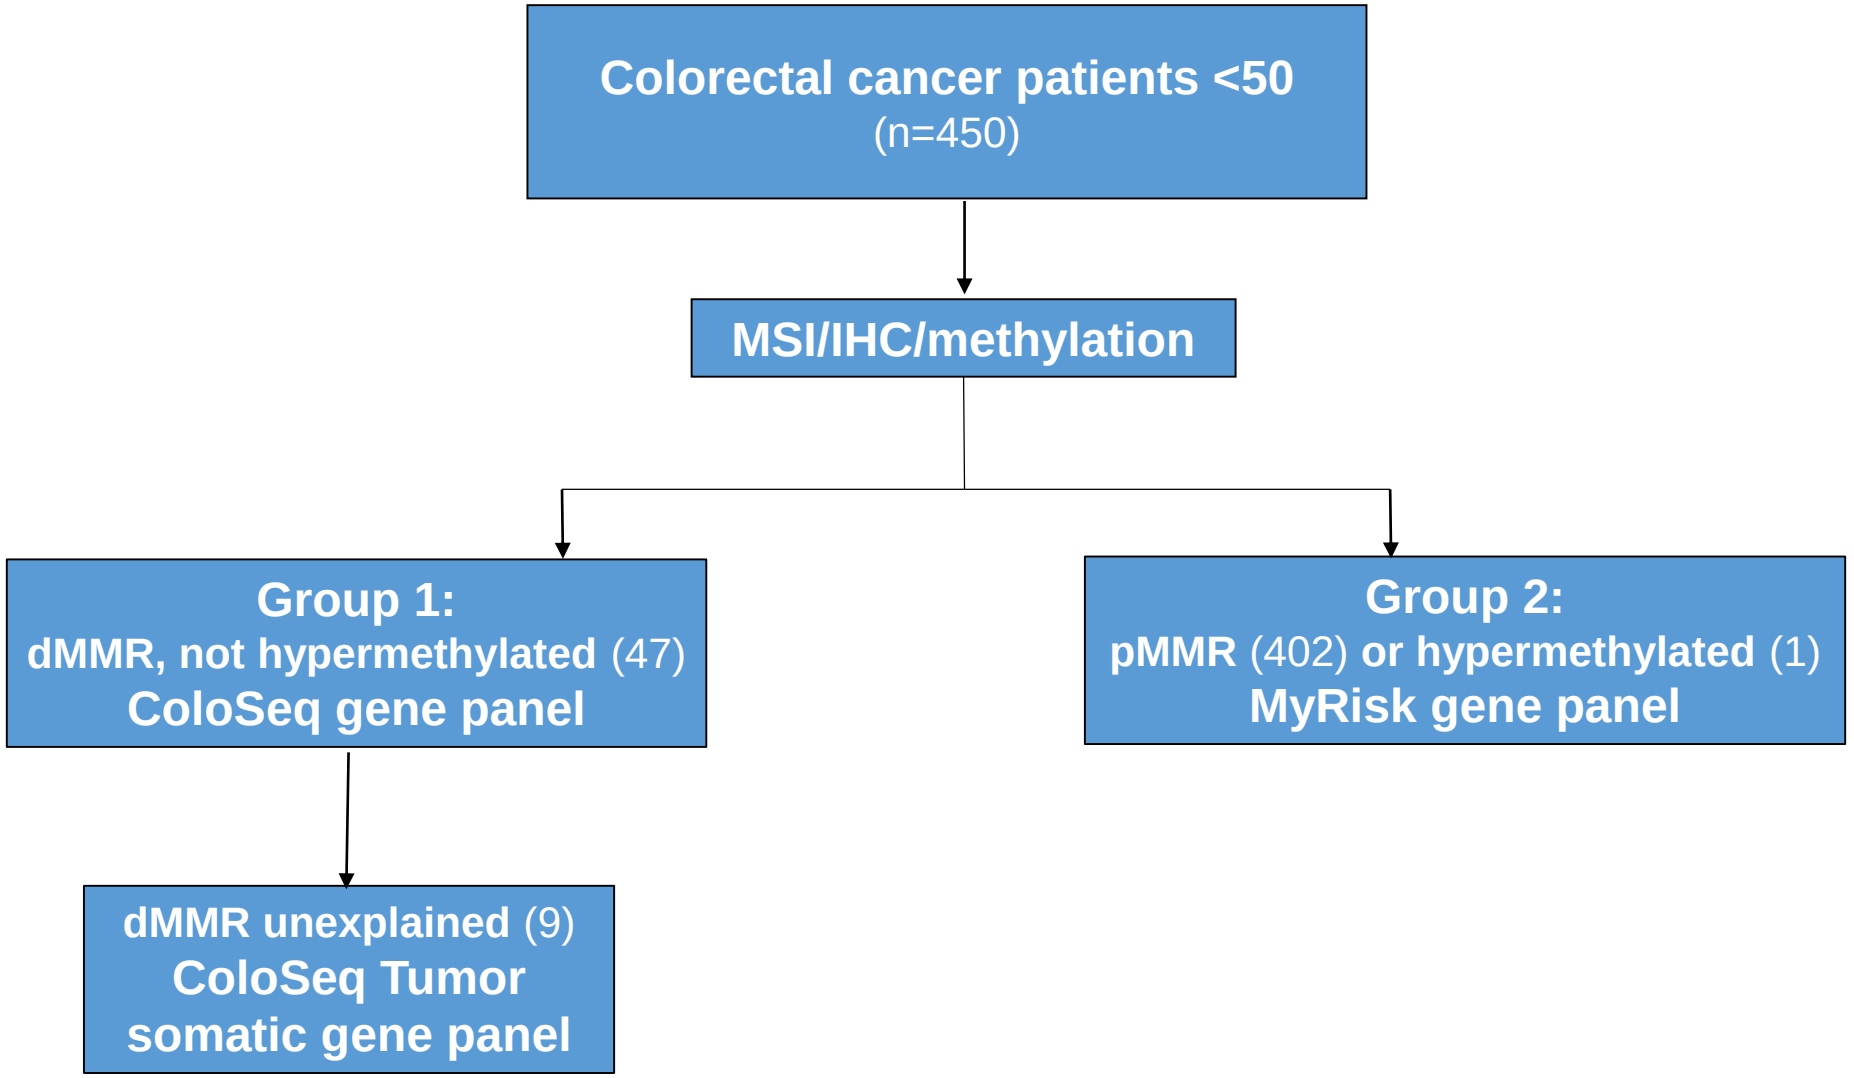
Ohio Colorectal Cancer Prevention Initiative (OCCPI)

- **Eligibility**: All patients diagnosed with a primary invasive colorectal adenocarcinoma with surgical resection in Ohio between 1/1/2013 and 12/31/2016
- **Enrollment**: 3319 CRC patients enrolled in the OCCPI
  - **450 diagnosed <50 with testing complet included in this subset analysis**



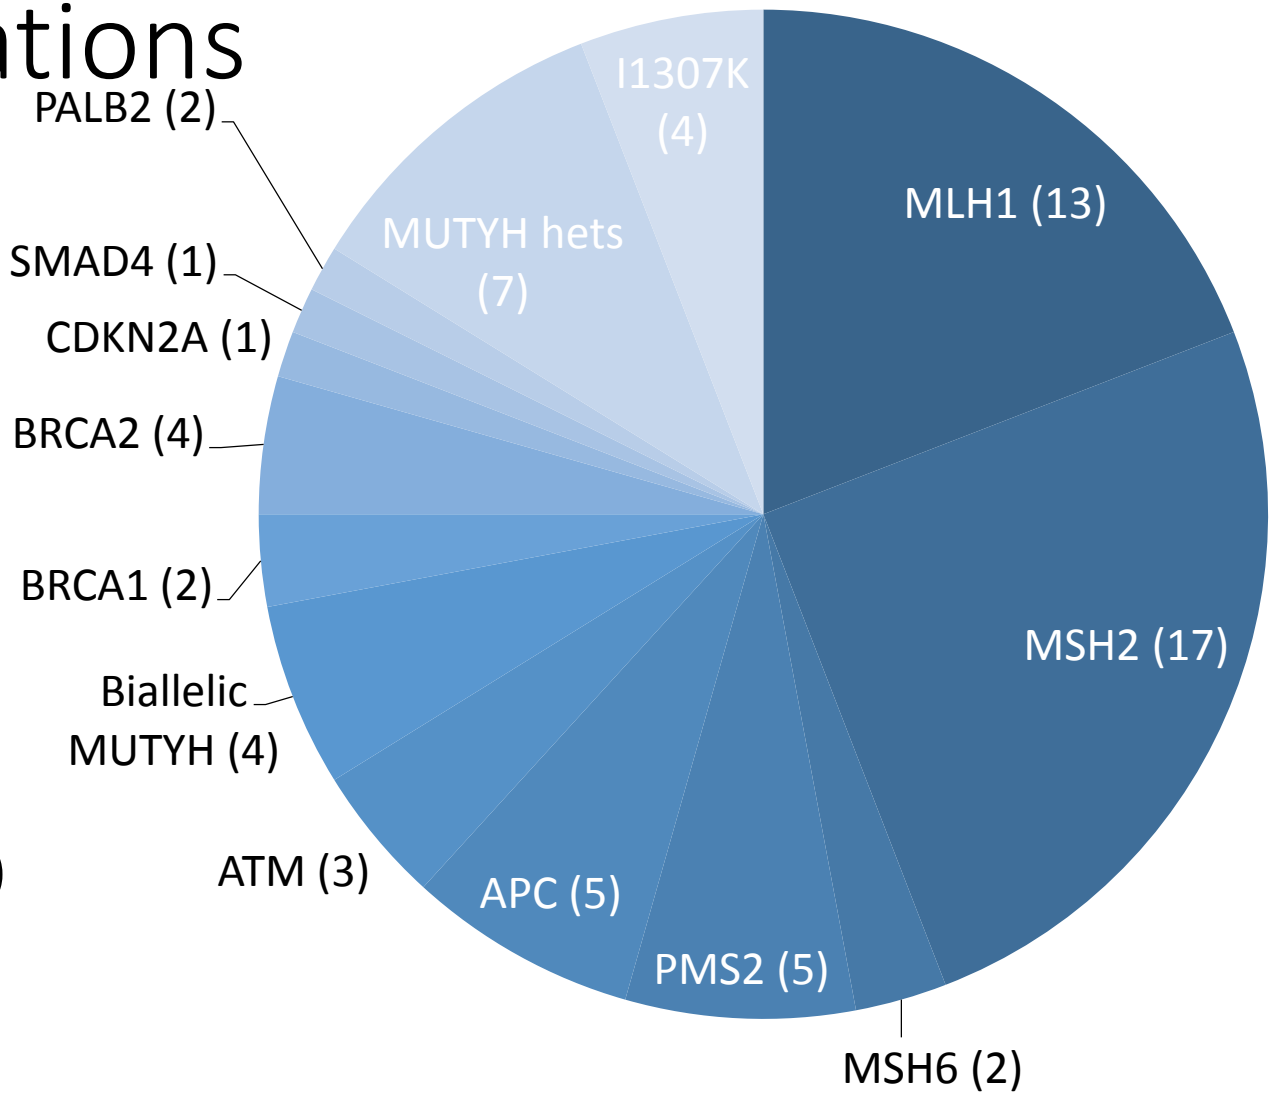
Procedures



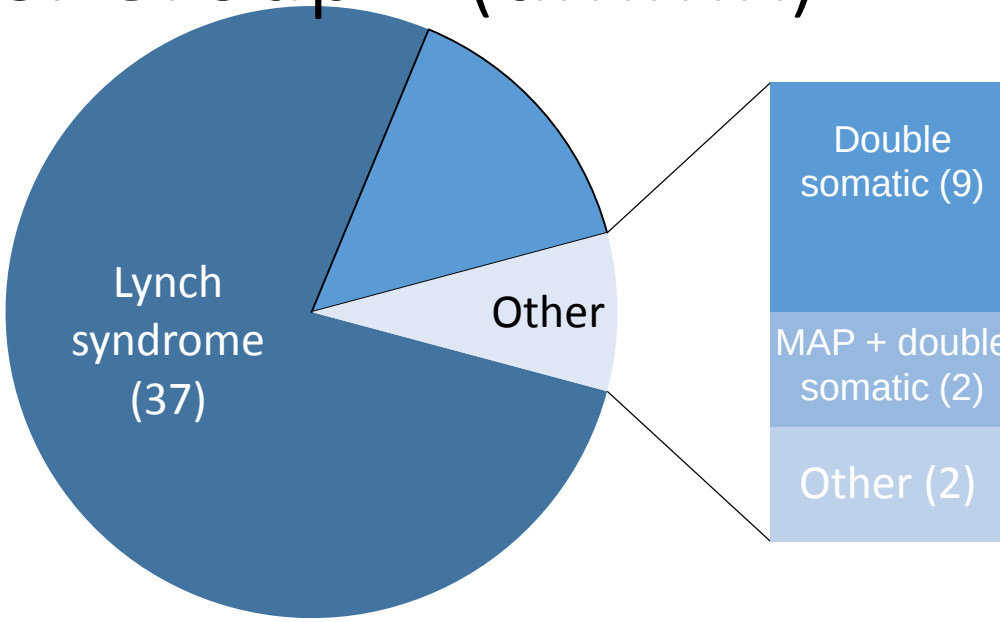
Colorectal cancer patients <50
(n=450)
MSI/IHC/methylation
Group 1:
dMMR, not hypermethylated (47)
ColoSeq gene panel
Group 2:
pMMR (402) or hypermethylated (1)
MyRisk gene panel
dMMR unexplained (9)
ColoSeq Tumor
somatic gene panel

Results: All mutations

- **1 out of 8 (16%)** have at least one hereditary cancer syndrome
- **1 out of 11 (8.4%)** have Lynch syndrome
- **1 out of 15 (7.8%)** have another hereditary cancer syndrome

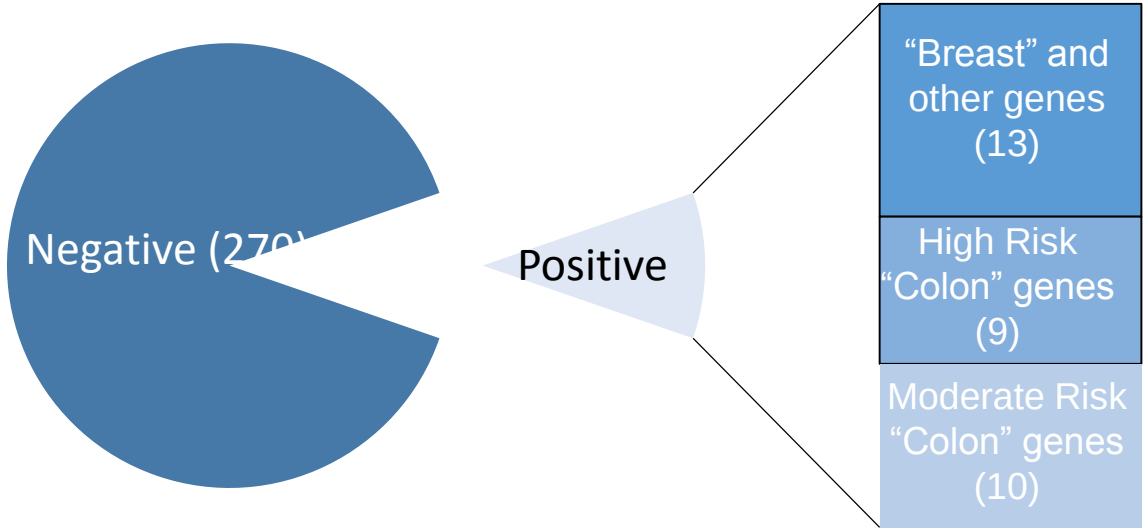


Results: Group 1 (dMMR)



- **37/48** (77%) with a dMMR tumor have LS (13 *MLH1*, 17 *MSH2*, 2 *MSH6*, 5 *PMS2*)
- **2/48** (4%) Other (1 MLH1 methylation & APC I1307K mutation & PMS2 VUS)
- **9/9** with a dMMR tumor and no MMR germline mutation have double somatic mutations
- **2/9** with a dMMR tumor and no MMR germline mutation have biallelic *MUTYH* mutations

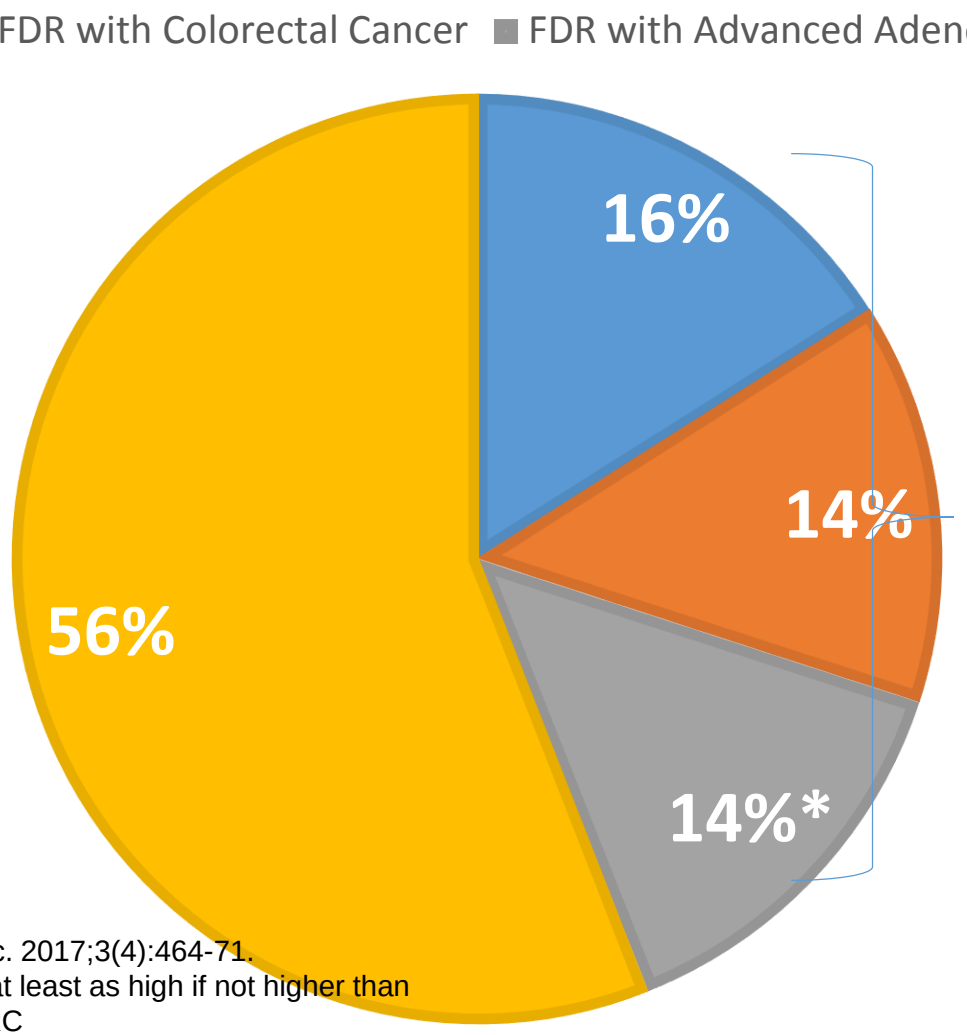
Results: Group 2 (pMMR)



*One patient has mutations in 2 different genes

- **32/402** (8%) with a pMMR tumor have a mutation*
- 9 in genes strongly associated with CRC risk (5 *APC*, 1 *APC/PMS2*, 2 MAP, 1 *SMAD4*)
- 13 in genes not traditionally associated with CRC risk (6 *BRCA1/2*, 3 *ATM*, 1 *ATM/CHEK2*, 2 *PALB2*, 1 *CDKN2A*)
- 10 in low penetrance CRC genes (3 I1307K & 7 *MUTYH* hets)

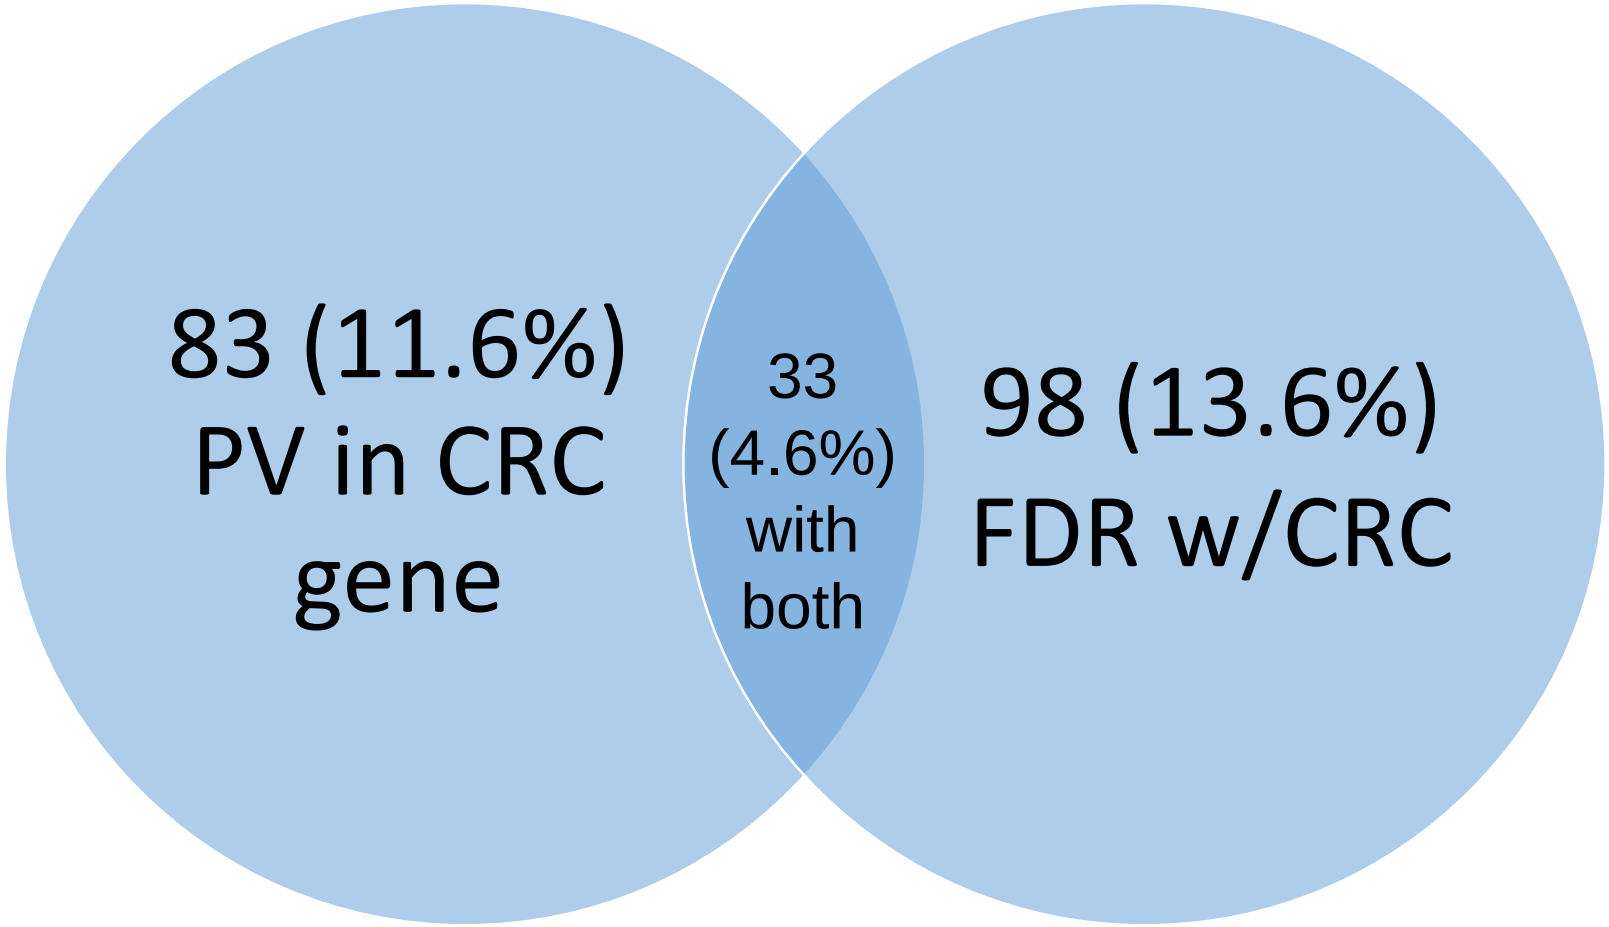
Nearly Half of Early-Onset CRC is Potentially Preventable



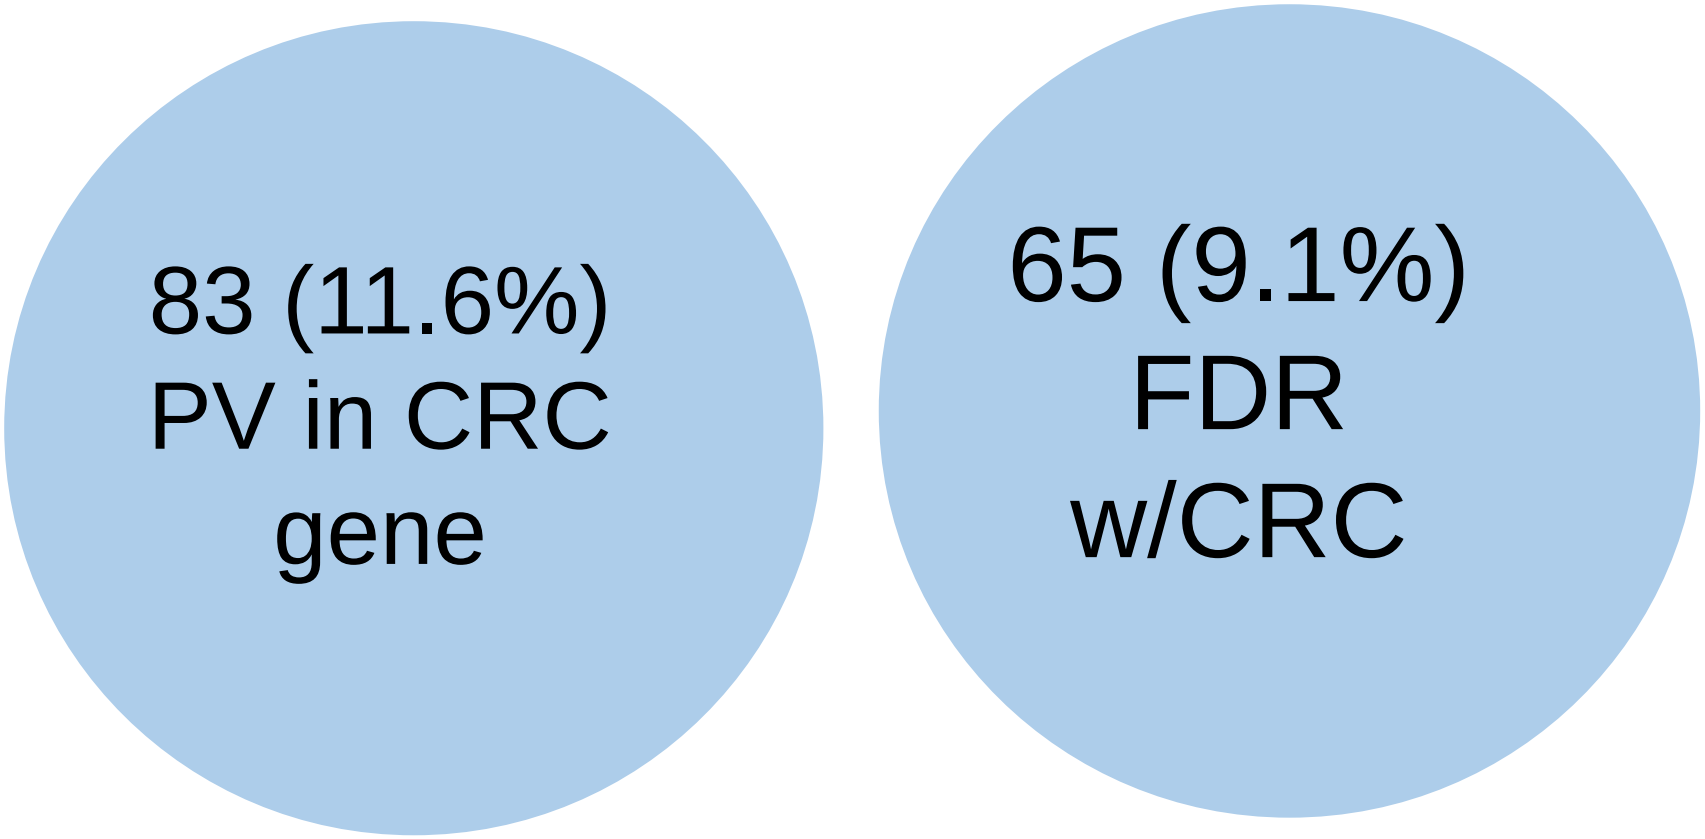
44% of Early-Onset Colorectal Cancer are Preventable by Family History taking and earlier and more frequent

Pearlman R, et al. JAMA Onc. 2017;3(4):464-71.
* Prevalence not known but at least as high if not higher than prevalence of a FDR with CRC

- **718 CRC patients dx <50 with complete testing at end of OCCPI study**
- **148 (20.6%) unique high risk individuals**



For Analysis Purposes

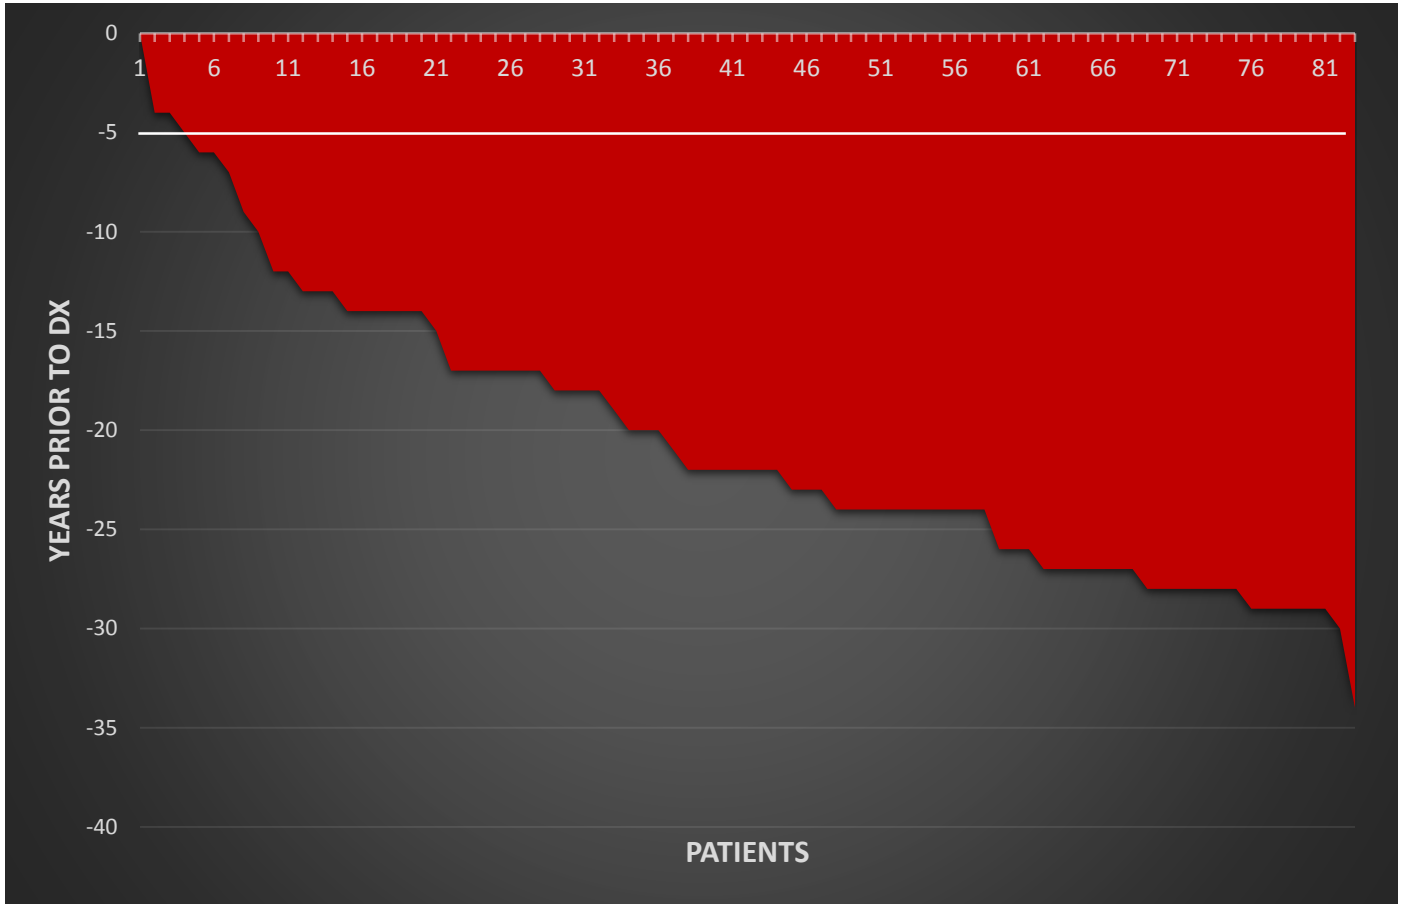


Hereditary CRC Risk Group

- 82 (98.8% of 83) would have initiated surveillance prior to diagnosis
  - 79 (95.2%) would have been potentially prevented (>5 years)
  - 3 (3.6%) would have been potentially downstaged (≤5 years)
    - 1 (1.2%) with stage I CRC (*CHEK2)*
  - 1 (1.2%) neither prevented nor downstaged
    - *MSH2 PV*

Hereditary CRC Risk Group

- Difference between age of onset and first recommended colonoscopy (pathogenic variants with colorectal cancer guidelines)

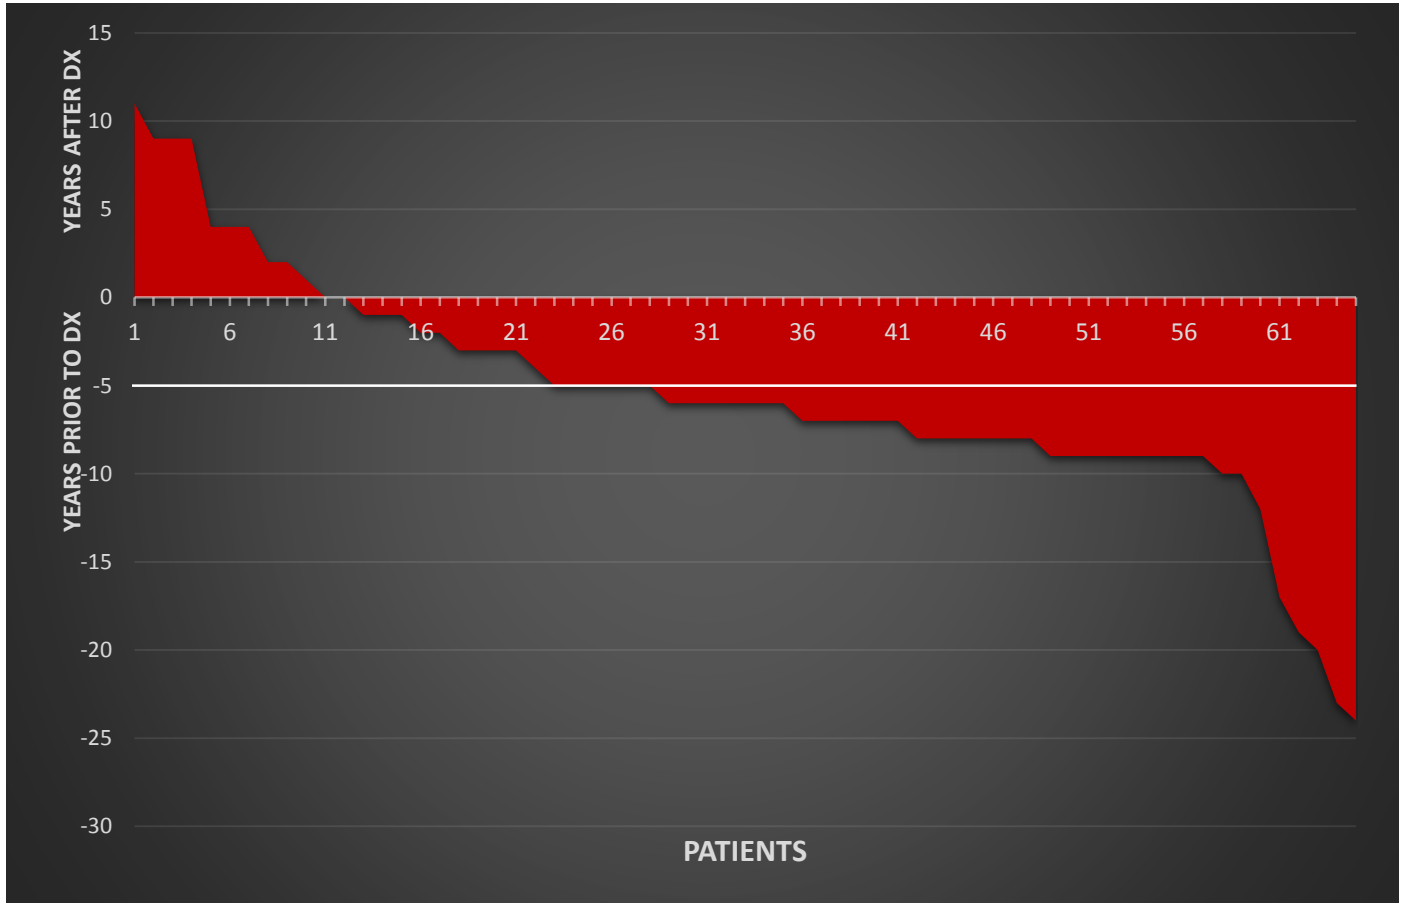


Family History Group

- 53 (81.5%) of 65 would have initiated surveillance prior to diagnosis
  - 37 (56.9%) would have been potentially prevented (>5 years)
  - 16 (24.6%) would have been potentially downstaged (≤5 years)
    - 2 (3.1%) with stage I CRC
  - 12 (18.5%) neither prevented nor downstaged

Family History Group

- Difference between age of onset and first recommended colonoscopy (family history)



Increasing the Yield of Family History

- If family history guidelines were initiated at a maximum age of 35 years compared to 40, the results change:
  - 51 of 65 (78.5%) at age 35 compared to 37 of 65 (56.9%) with current guidelines
  - Also results in 6 (9.2%) beginning surveillance within 5 years of diagnosis
    - 60 (92.3%) could have been prevented or downstaged.

Effects of Adherence to Guidelines

	Colon-oscopy Prior to Diagnosis	CRC Prevented	CRC Downstaged	CRC Not Prevented or Downstaged	Total Patients
Hereditary CRC Risk	82 (98.8%)	79 (95.2%)	3 (3.6%)	1 (1.2%)	83 (100%)
FDR with CRC only	53 (81.5%)	37 (56.9%)	16 (24.6%)	12 (18.5%)	65 (100%)
All High-Risk Patients	135 (91.2%)	116 (78.4%)	19 (12.8%)	13 (8.8%)	148 (100%)

What about the New ACS Screening Guidelines

- All 718 patients diagnosed <50
- None of the cancers would have been prevented since screening would not have started >5 years prior to dx
- 570 without FDR with CRC or PV with CRC guidelines
  - ACS recommendation of colonoscopy at 45
  - 236 (41.4%) potentially downstaged

Overall Results

- 116 of 718 (16.2%) early-onset CRC patients identified through OCCPI would have had their CRC potentially prevented based on FDR with CRC or genetics alone.
- 19 of 718 (2.6%) would have had their CRC potentially downstaged
    - 2 (0.3%) with stage I CRC

Conclusion

- 16% of early-onset CRC patients have a mutation in a cancer susceptibility gene
- 16.2% (116/718) of early-onset CRC potentially preventable.
- Surveillance guidelines for hereditary CRC more effective than those for FDR only (95.2% vs 56.9%).
  - FDR-based guidelines may benefit from adjustment (57.8% current; 80.0% 35)

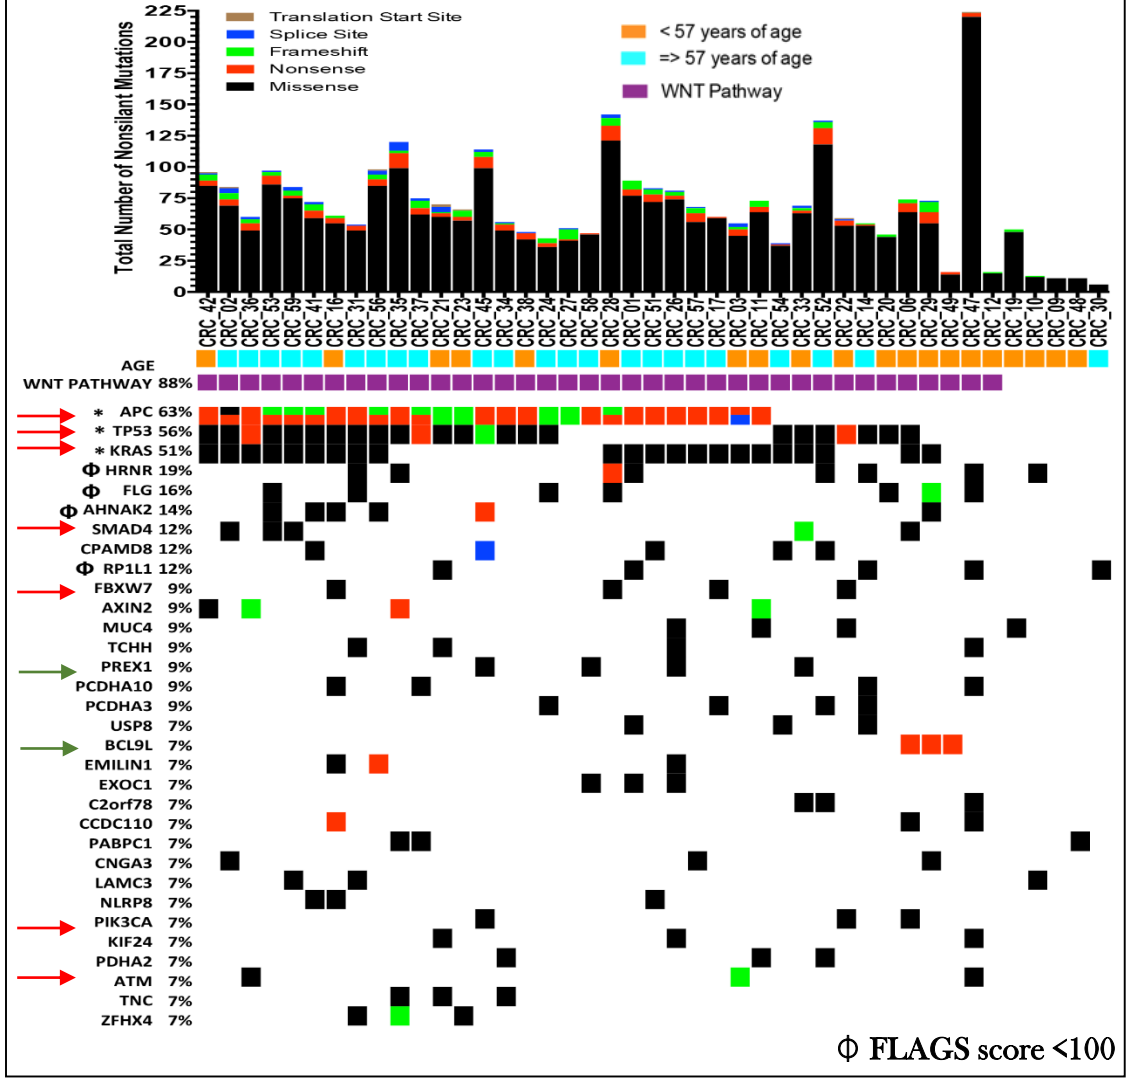
Understand biological differences in CRC among AAs through the analysis of somatic mutational, copy number variation and methylation profiles, and compare features among younger *vs.* older individuals

Mutation analysis



- Somatic mutations generated by Strelka
- Mutation analysis using MutSig (ranked potential driver genes based on q value <0.1)

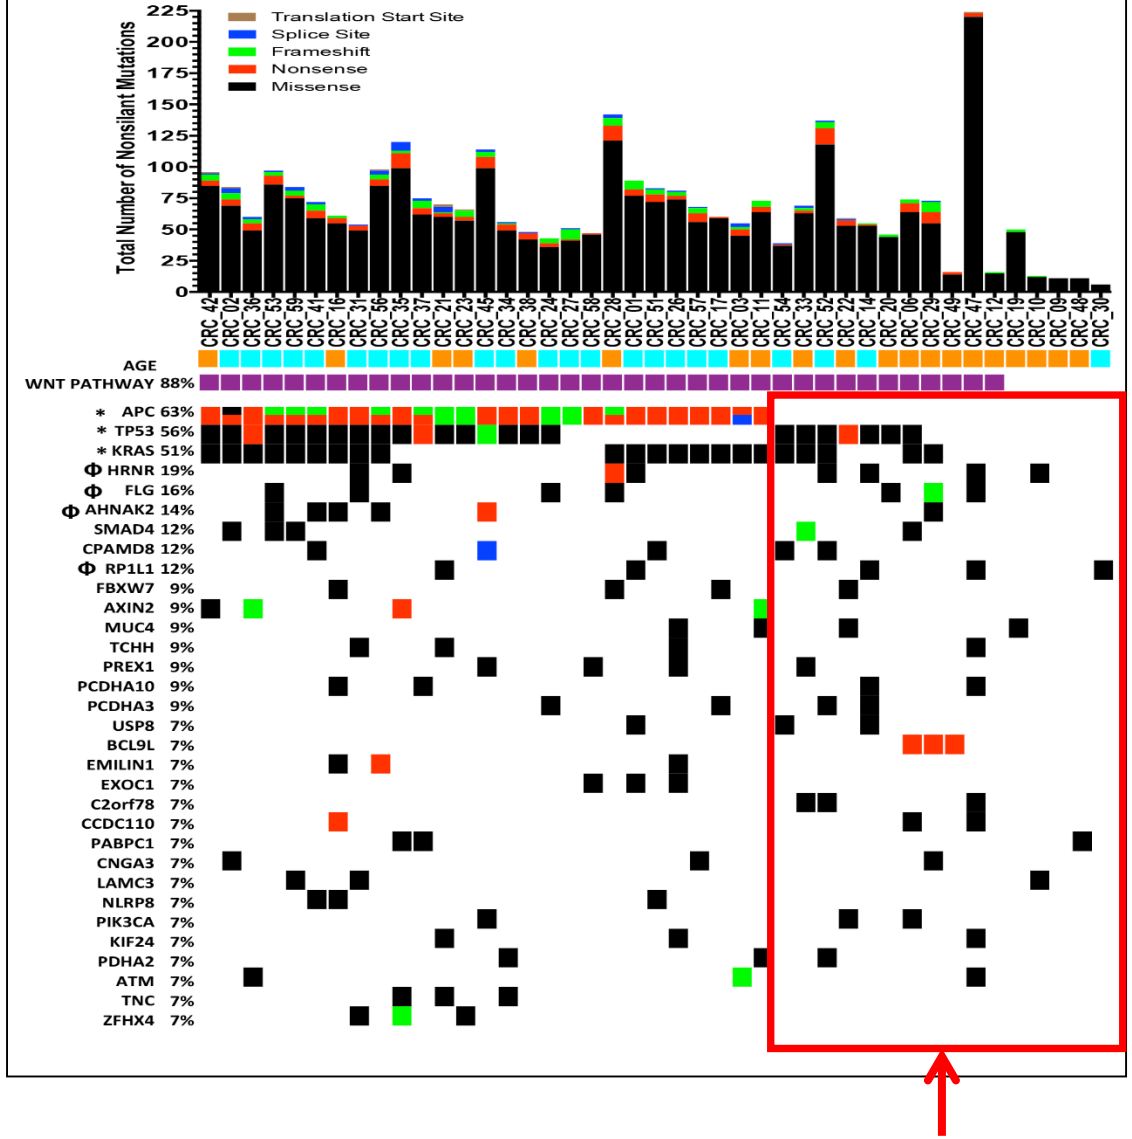
❖ 43 microsatellite stable tumors included
(2 POLE hypermutated excluded)

❖ 32 recurrent mutated genes identified, each of them had at least three non-silent mutations

32 genes: APC, TP53, KRAS, SMAD4, FBXW7, PIK3CA, ATM, well-established CRC driver genes

❖ 2 Novel genes are reasonable drivers: *PREX1* (guanine nucleotide exchange factor for RAC) and *BCL9L* (Wnt signaling)

Xicola, *et al.* Carcinogenesis. 2018, Vol. 39, No. 11: 1331–1341



Lower frequency of *APC* mutations in AA CRCs

- Frequencies of *TP53* and *KRAS* mutations in AA CRCs were not significantly different from those in NHW* CRC
- Frequency of *APC* mutations in AA CRCs (63%) was significantly lower than in NHW* (80%) p=0.03

***APC* mutation-negative CRCs**

*186 non-hypermutated CRCs in NHW from TCGA

Xicola, *et al.* Carcinogenesis. 2018, Vol. 39, No. 11: 1331–1341

APC mutation negative associated with younger age of onset CRC

Feature	APC mutation positive (n=27)	APC mutation negative (n=16)	P value[1]
Clinical-pathological			
Gender, males/females	19/8	7/9	0.11
Age at diagnosis, mean (SD)	62 (12)	51 (11)	0.01
Percent WAA, mean (SD)	80 (20)	73 (13)	0.19
FDR with cancer <60 yo (%)	10 (37)	6 (38)	1
Cases with previous cancer(%)	1 (4)	4 (25)	0.06
Tumor location (R/L)	9/18	6/10	1
TNM stage, 0-II vs III-IV	11/15	9/7	0.52
Grade, Low+Moderate/High	13/10	13/2	0.08

TCGA:

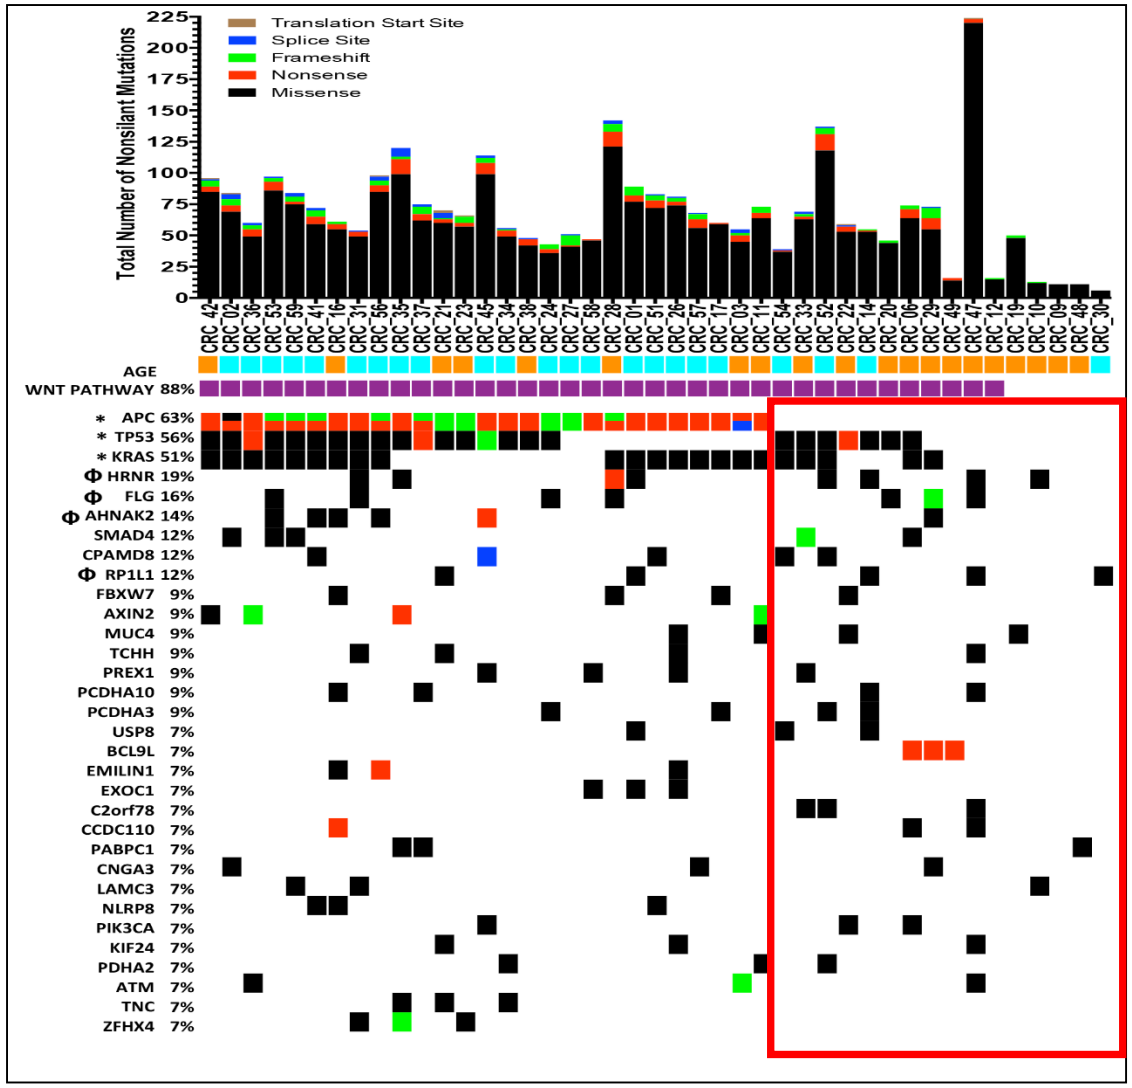
219 NHW non-hypermutated CRC:181 APC mutation +/ 38 APC mutation -

Median age:
APC + : 68.0
APC - : 54.5

Association APC - tumors and early-onset CRC significant ($P < 10^{-5}$)

Xicola, *et al.* Carcinogenesis. 2018, Vol. 39, No. 11: 1331–1341

APC mutation negative have less mutations



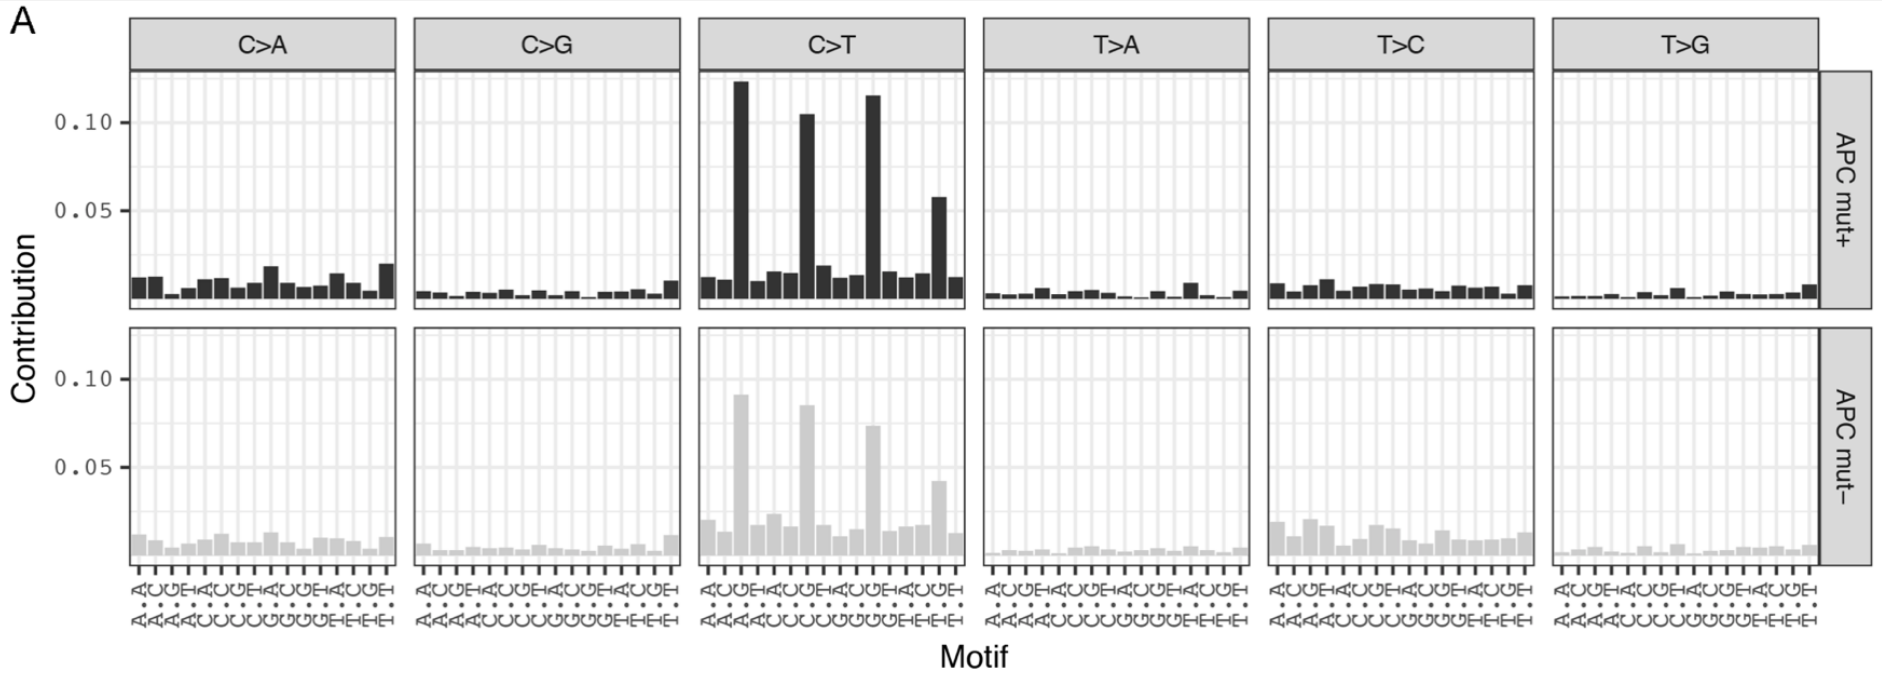
Median mutation frequencies:

- *APC* + : 170
- *APC* - : 107 (P = 0.006, Mann–Whitney test)

***APC* mutation-negative CRCs**

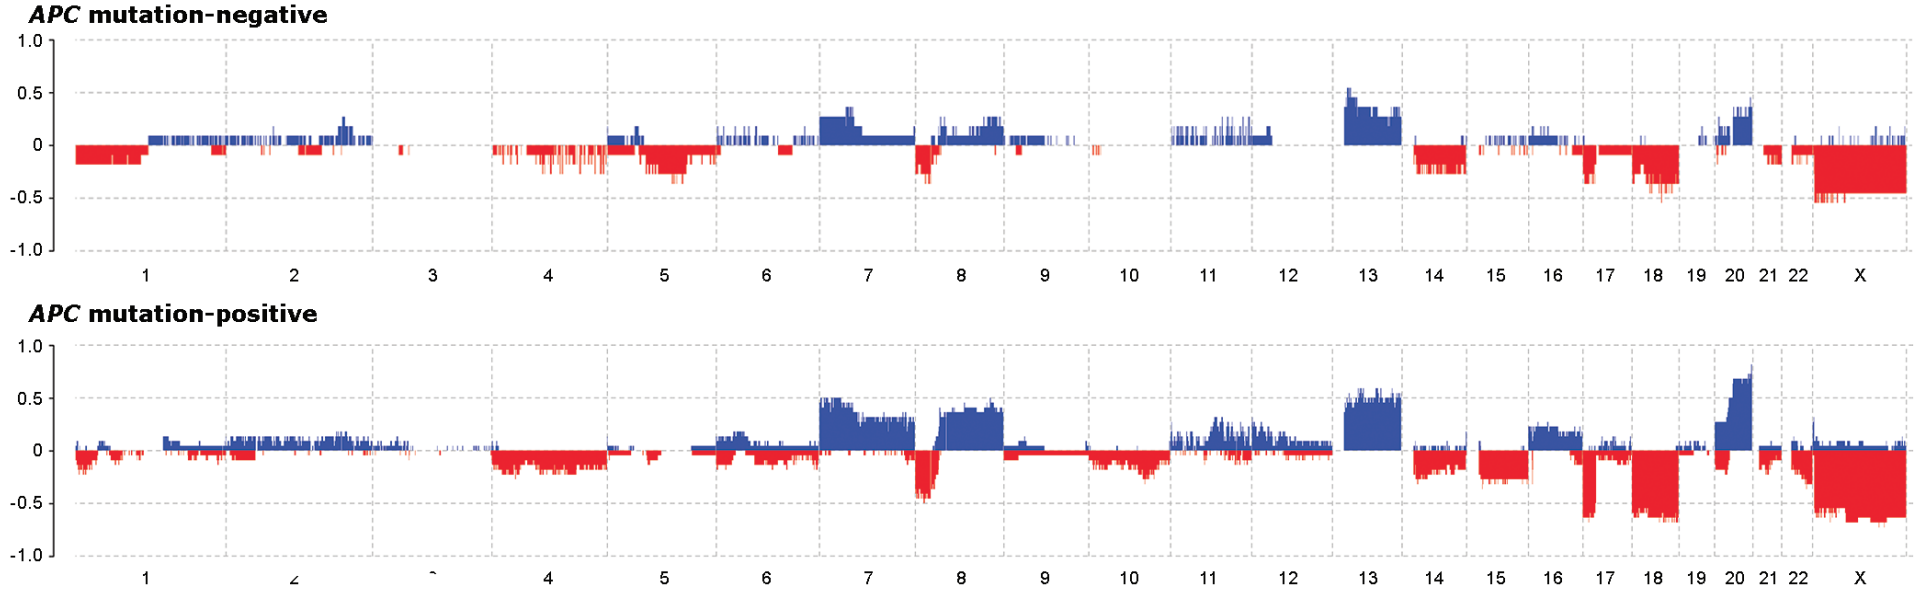
Xicola, *et al.* Carcinogenesis. 2018, Vol. 39, No. 11: 1331–1341

Mutagenesis patterns: equal mutational signatures *APC*+ and *APC*-



- Frequencies of mutant triplets in exome sequencing data
- Predominance of C to T mutations in the CpG dinucleotide (as expected for MSS CRC): reflecting a mutational process dominated by deamination of methylated cytosines
- Equal frequencies of triplets in *APC*+ and *APC*- CRCs

Greater chromosome stability among *APC* mutation negative CRC

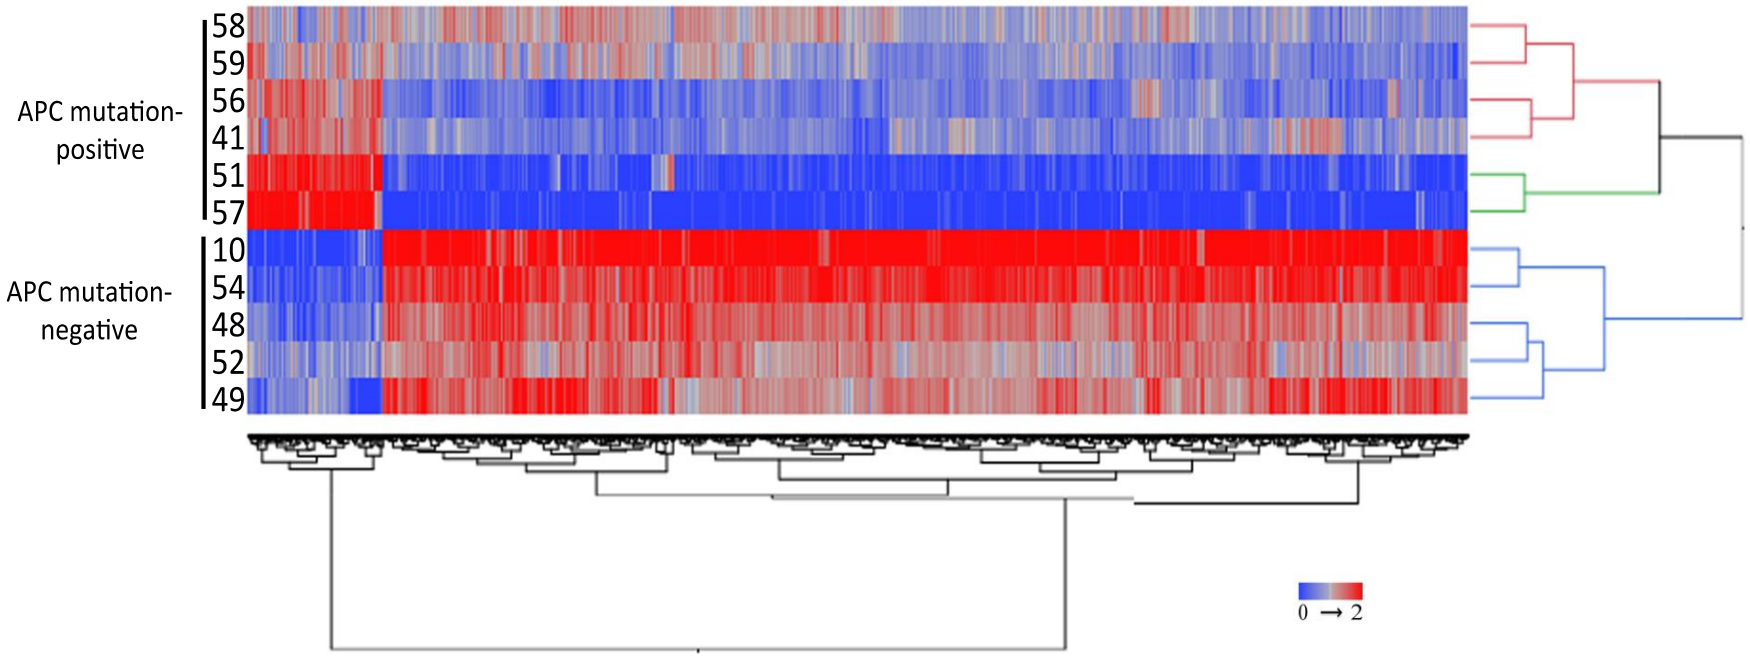


Chromosome-arm gains and losses: substantially lower levels in the *APC*- tumors compared with the *APC*+ tumors (P<0.03; R package Rawcopy)

Xicola, *et al.* Carcinogenesis. 2018, Vol. 39, No. 11: 1331–1341

APC - : genome-wide hypermethylation with focal hypomethylation
APC + : genome-wide hypomethylation with focal hypermethylation

CRC methylation clusters by *APC* mutation status

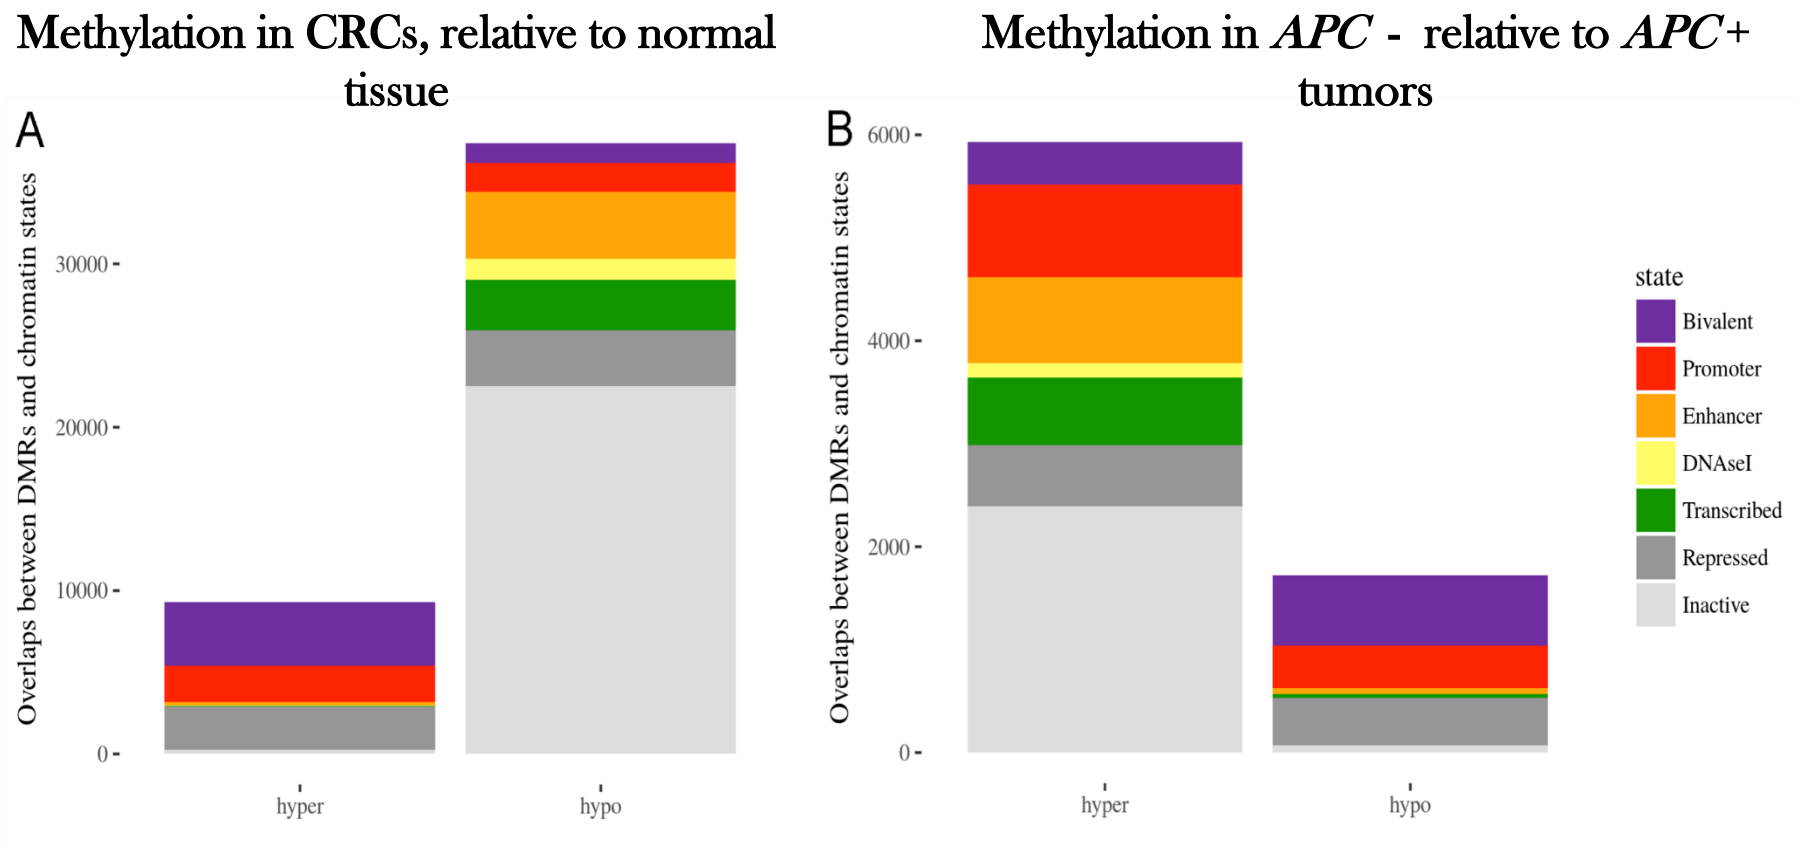


5923 differentially methylated regions (DMR)

Cluster analysis of the 200 most variable DMRs in the TCGA yielded similar results

Xicola, *et al.* Carcinogenesis. 2018, Vol. 39, No. 11: 1331–1341

APC mutation-negative CRCs have hypermethylated regulatory regions



Reference Epigenome Mapping Consortium's chromatin state map for normal colonic mucosa based on ChIP-seq data to annotate differentially methylated regions

Xicola, *et al.* Carcinogenesis. 2018, Vol. 39, No. 11: 1331–1341

APC - specific differentially methylated genes

- Three TCGA-identified cancer driver genes: *SOX9*, *GPC6*, and *KIAA1804*, were hypermethylated in *APC*- tumors whereas the same sites were hypomethylated in *APC*+ tumors.

- Promoter hypermethylation in *APC*- was also observed in key WNT signaling pathway genes including *GATA6*, *TET1*, *FAT1*, and *GLIS1*

Summary

- Younger age of onset CRC associated with *APC* – tumors
- These tumors show fewer somatic mutations and copy number alterations with an increased level of overall hypermethylation than *APC*+ tumors
- *APC*- CRCs are associated with a novel DNA methylation signature: characterized by hypermethylation of select regulatory regions, affecting in particular genes in the WNT signaling pathway
- Methylation of genes in the WNT signaling pathway may allow by-pass of somatic mutation in *APC*

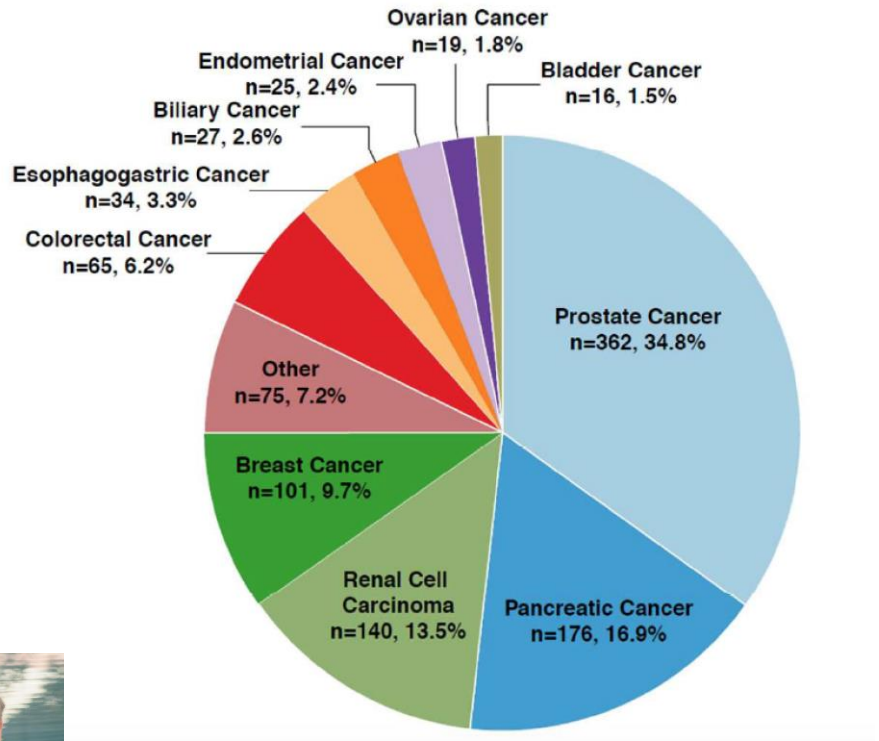
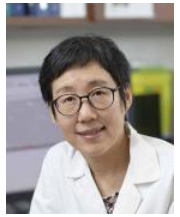
Prevalence of pathogenic germline variants

First 1,040 patients prospectively tested by MSK-IMPACT

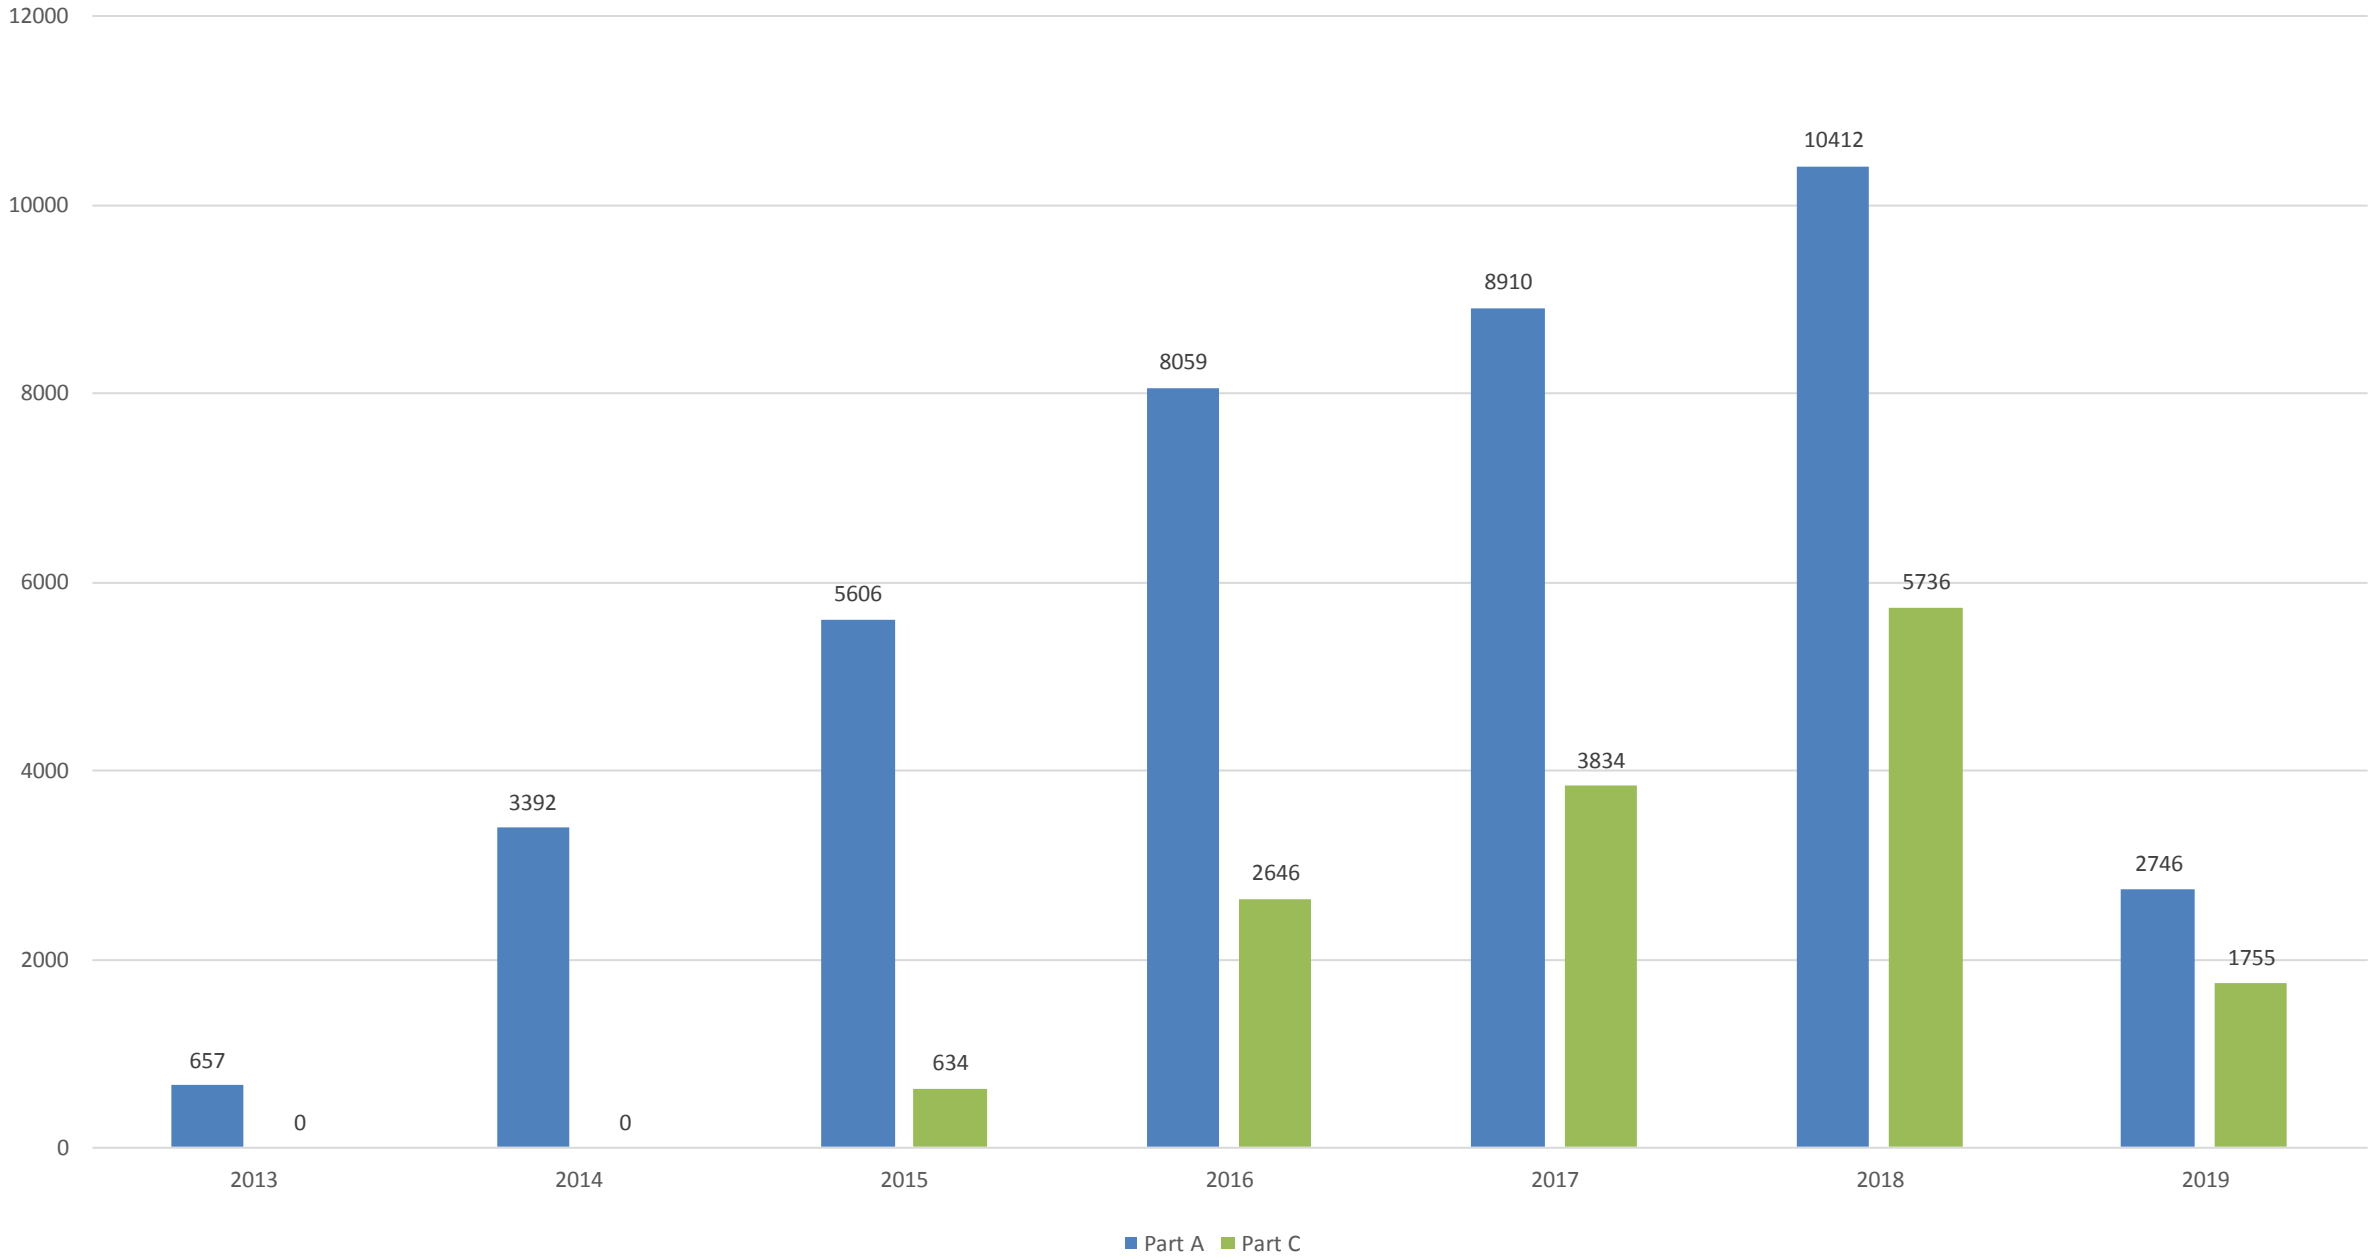


- **17.5% patients had clinically actionable pathogenic variants conferring cancer susceptibility**
- ***30-55% of these would not have been detected by clinical guidelines-directed testing, depending on case mix, ancestry and stage***



Clinical Genetics: Mark Robson, Kenneth Offit
Diagnostic Molecular Genetics: Diana Mandelker, Ozge Birsoy, Liying Zhang
(Mandelker *et al*., *JAMA* 2017)

Accrual to MSK-IMPACT Somatic and Germline: 2013 – 2019



Penetrance	Known CRC Associated Genes
High	*APC, EPCAM, MLH1, MSH2, MSH6, PMS2, MUTYH (biallelic), POLD1, POLE, TP53, SMAD4, BMPR1A, SMAD4, PTEN*
Moderate	*CHEK2*
Low	*APC (1307K)* *MUTYH (heterozygous)*
Recessive/ Uncertain	*MSH3, NTHL1*

Baseline Characteristics of AYA-CRC (<50 age)

Baseline Characteristics	N=464
Median Age at Diagnosis (range)	42 (14-49)

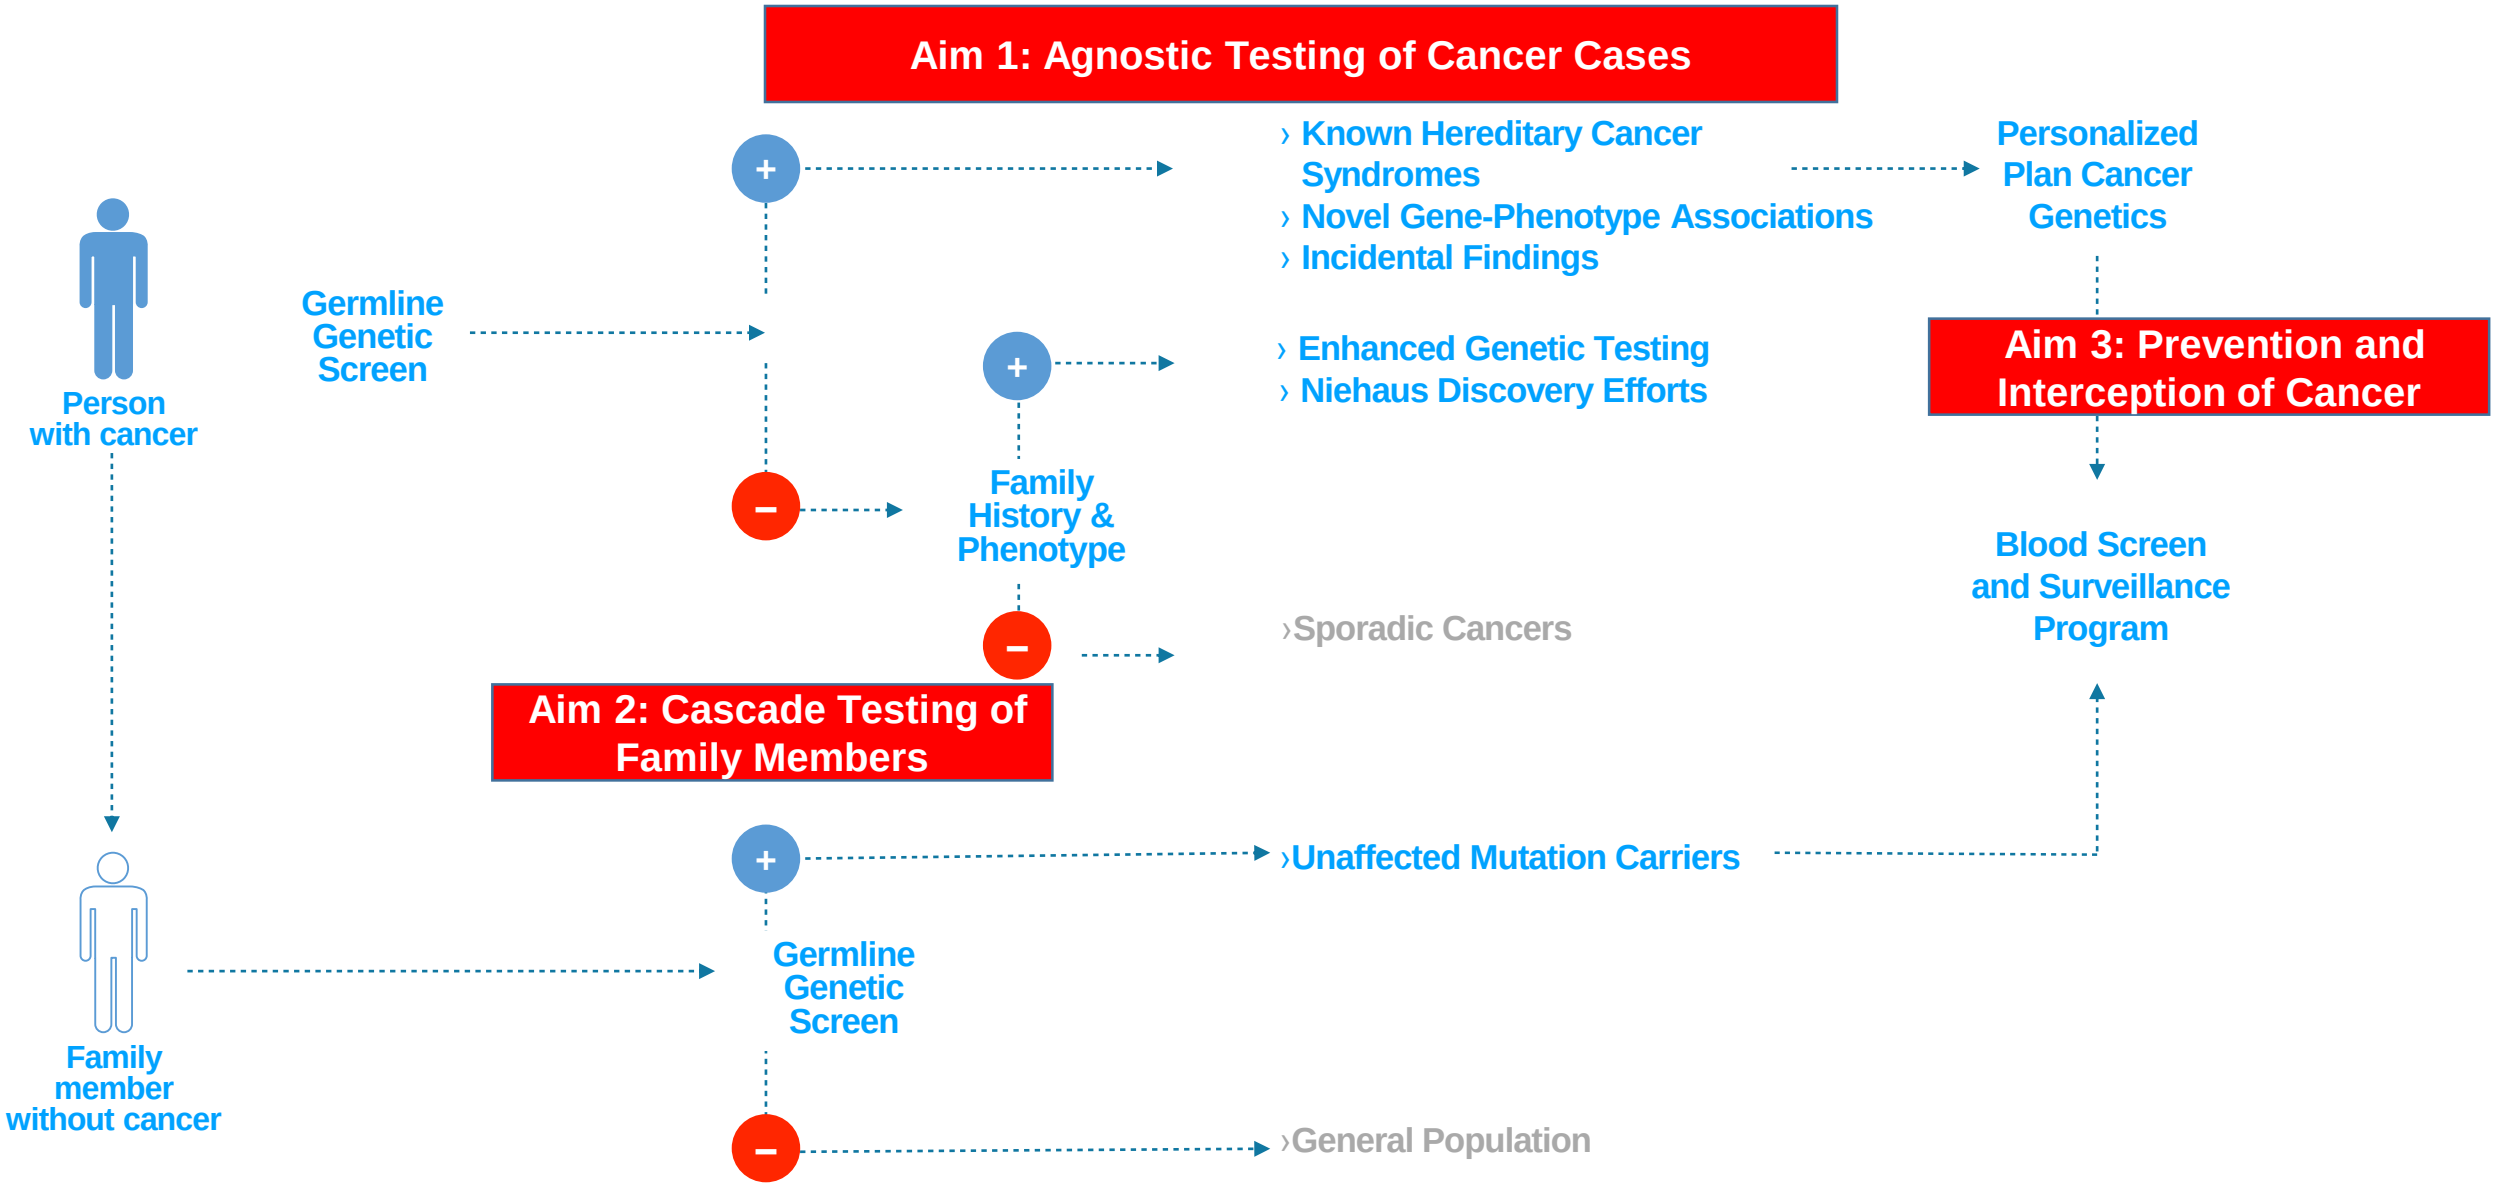
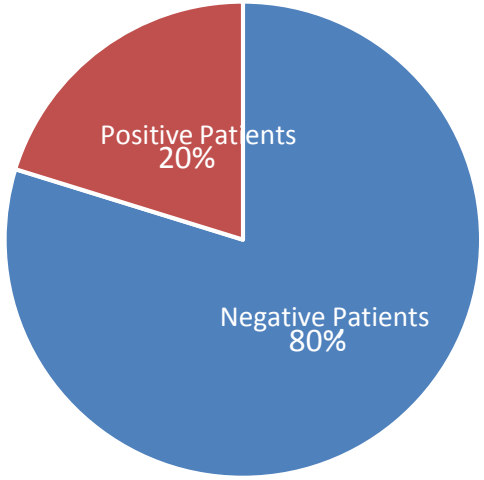
Precision, Interception and Prevention (PIP): Germline Cancer Genetics

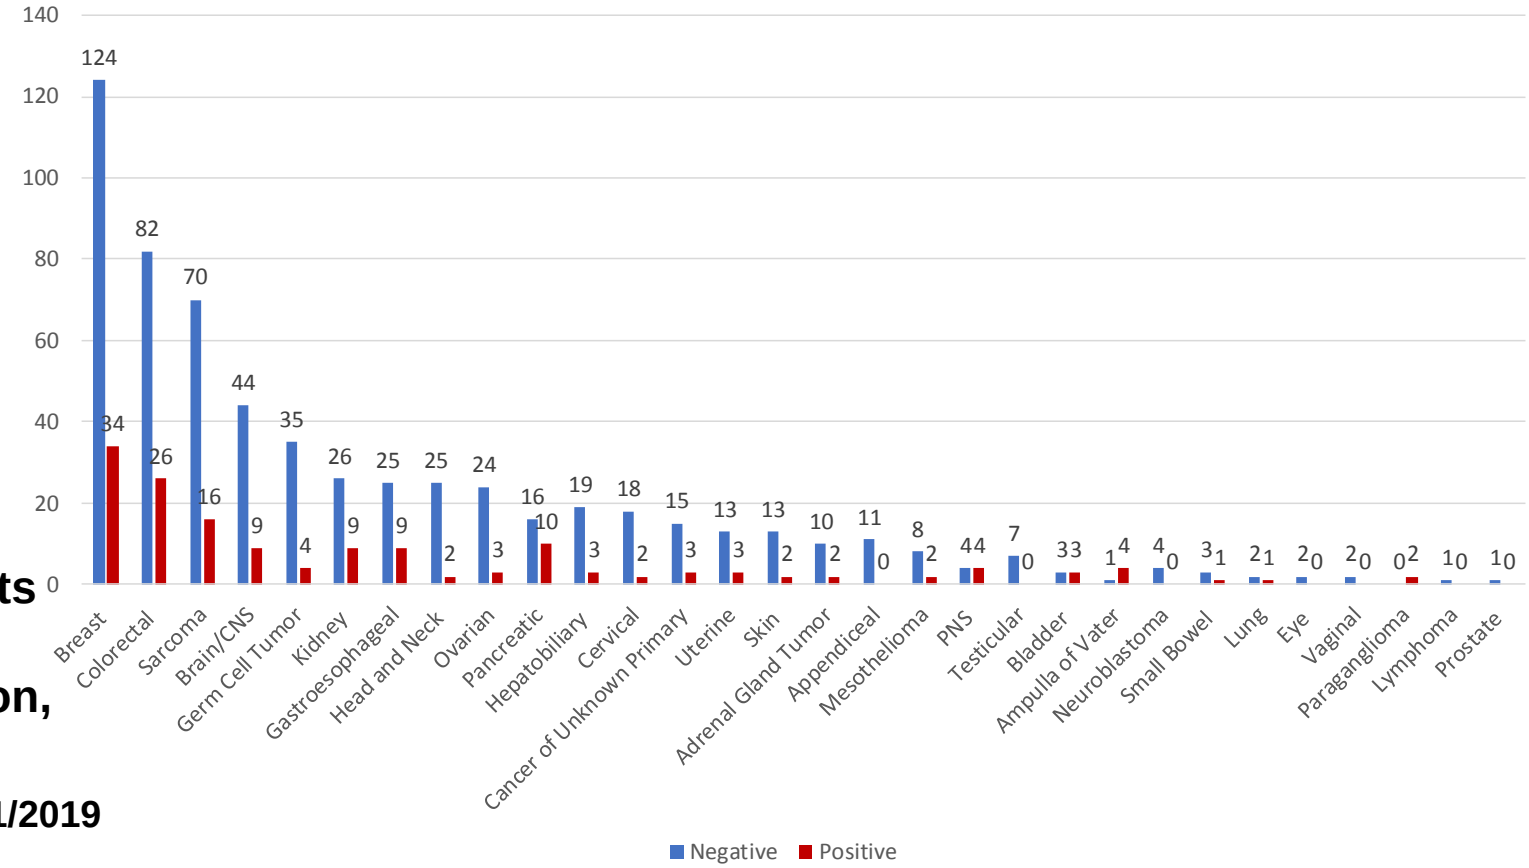


Germline mutations in YOUNG-ADULT cancer patients: Ages 18-35

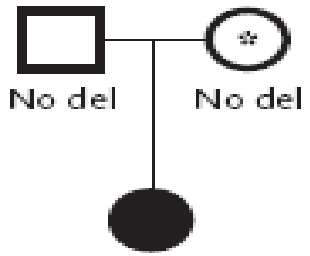


Young-Adult Cancer Patients (age 18-35); N=762
Part of Precision, Interception, Prevention (PIP) effort

Stadler, et al. YA patients as of 2/1/2019



‘Trio’ design



- **10% of TGCT trios with de novo rare copy-number variants (CNVs) (Stadler et al. *AJHG*)**
- **Exome data: 9% of trios with likely gene disrupting, rare, *de novo* mutations**

Genome-Targeted Prevention and Interception Clinic

- Cancer genetics PIP initiatives will result in a substantial increase in the number of individuals with **POSITIVE** germline genetic findings

› **Known Hereditary Cancer Syndromes**
› **Novel Gene-Phenotype Associations**
› **Novel & Incidental Discovery Findings**

› **UNAFFECTED Mutation Carriers**

→

LONGITUDINAL FOLLOW-UP CARE

→

› **Cancer surveillance (breast MRI, mammography, colonoscopy, ultrasonography etc)**
› **Clinical procedures (endometrial biopsy skin biopsy)**
› **Risk-reduction measures: surgical referrals**
› **Direct in-house referral to surgical/medical oncologist**
› **Opportunity for additional research: outcomes, non-invasive prospective screening, cancer prevention trials**

Alicia Latham, MD
in concert with the Survivorship Program, General Medicine Division

Conclusion

YO-CRC has a substantial hereditary component; however, majority of the genetic risk remains unexplained

Identification of germline mutations offers opportunities for early detection, intervention, and prevention

Patient outreach and engagement vital to success of screening and intervention efforts

As part of the Niehaus Center gene discovery efforts, the unexplained rise in young-adult CRC and other cancers will require exome, genome, and possibly transcriptome sequencing and functional genomic studies

Other exposures:
Diet
Microbiome
Lifestyle

Manolio et al, Nature 2009

Conclusions: Germline Mutations in Young CRC

- Hereditary Cancer Syndromes diagnosed in 1 in 5 individuals with early onset CRC
- Multigene panel germline testing for all CRC age<50 increases diagnostic yield
- Majority of early onset CRCs are not associated with highly-penetrant hereditary cancer syndromes
  - Utility of genotype and lifestyle data (TBD)
    - CRC risk
    - Pathogenesis

Thank you!

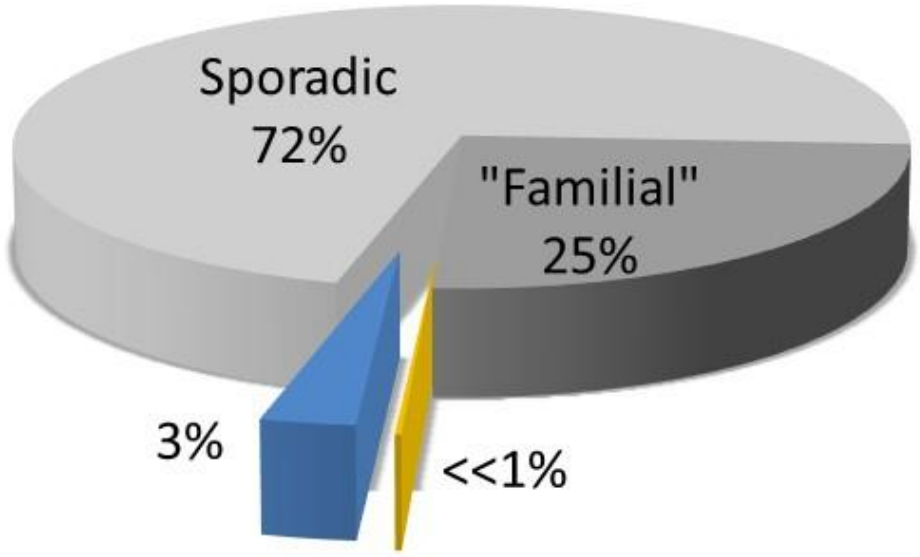
How we used to view hereditary colorectal cancer (circa 2013)



Lynch syndrome
Other rare syndromes

Background

- Hereditary factors play a key role in the etiology and risk of colorectal cancer

- Genetic testing for inherited cancer syndromes has the potential help prevent cancer and cancer-related death
  - Germline risk identified → Specialized risk-reducing interventions
    → At-risk family members tested ("cascade testing")
    → Therapeutic implications for select patients with advanced cancer

- Advances in next-generation sequencing technologies now allow for rapid assessment of numerous genes in parallel
  - Multi-gene panels widely commercially available for hereditary risk assessment
  - Costs rapidly decreasing

Multi-gene germline testing

- Scientific data about the use of such panels is only beginning to emerge
- Ability to perform comprehensive germline evaluation has outpaced our ability to use and interpret such technology
- The more you look, the more you find…

Multigene Panels to Evaluate Hereditary Cancer Risk: Reckless or Relevant?

common (approximately 1 in 300) but remains underdiagnosed; and family history reporting is often biased by the proband history and is unreliable in families in which early deaths have occurred, that are small or in which adoption or nonpaternity has occurred, and in which knowledge of family history is poor. One might then argue that the provider who narrowly tests only those genes related to BC in the

Multi-gene germline testing – Colorectal cancer

- Which colorectal cancer patients need multi-gene germline testing?
  - High-risk colorectal cancer cases?
    - Suspected Lynch syndrome
    - Young-onset
  - All individuals with colorectal cancer?
- Aims:
  - To determine whether multi-gene germline testing offers meaningful advantages over syndrome-specific genetic evaluation strategies

Multi-gene germline testing – Suspected Lynch syndrome

- 1260 consecutive individuals referred to a commercial laboratory (Myriad Genetics) for clinical Lynch syndrome testing
  - All with personal history of Lynch-associated cancer and/or polyps
- After completion of clinical Lynch syndrome testing, samples anonymized for research-based testing with 25-gene multiplex panel
- Clinical data obtained from test request forms (completed by clinician ordering testing)
  - Ancestry
  - Personal history of cancer/polyps, including age at diagnosis
  - Family history of cancer

Yurgelun MB, et al. *Gastroenterology* 2015;149:604-13.

Multi-gene germline testing – Preliminary Data

- Population: Laboratory-based cohort of 1260 individuals referred for Lynch syndrome genetic testing due to personal history of cancer and/or polyps
- Methods: Multi-gene germline testing with a 25-gene panel. Clinical data obtained from test request form filled out by ordering clinician
- Results: 14.4% mutation prevalence; 39% of all mutations were in non-Lynch genes
  - >1% with *BRCA1/2* mutations; only 33% met NCCN criteria for *BRCA1/2* testing
  - 75% of all mutations found were in "high-penetrance" cancer susceptibility genes
  - 38% of participants had ≥1 VUS
- Conclusions: Clinical criteria for Lynch syndrome testing will identify substantial number of individuals with other forms of hereditary cancer risk
  - Individuals with atypical phenotypes
  - Limiting hereditary risk assessment (MSI/MMR IHC tumor testing and/or germline testing) will fail to identify substantial number of individuals with high-penetrance forms of inherited cancer risk
- Next steps: What about any/all individuals with colorectal cancer?

Yurgelun MB, et al. *Gastroenterology* 2015;149:604-13.

Multi-gene germline testing – All colorectal cancer patients

- Study Population: Clinic-based cohort of 1058 individuals with colorectal cancer (CRC) seen at DFCI and consecutively enrolled in institutional sample registry from 2008-14.
  - No pre-selection for age, personal/family cancer history, MSI/MMR IHC tumor testing

- Methods: Multi-gene germline testing with a 25-gene panel.
  - Pathology and clinical histories (including family history of cancer) verified by medical record review.

Characteristic	N (%)	Characteristic	N (%)
Male/Female	587 (55%) / 471 (45%)	Right-sided CRC	353 (33%)
		Left-sided CRC	362 (34%)

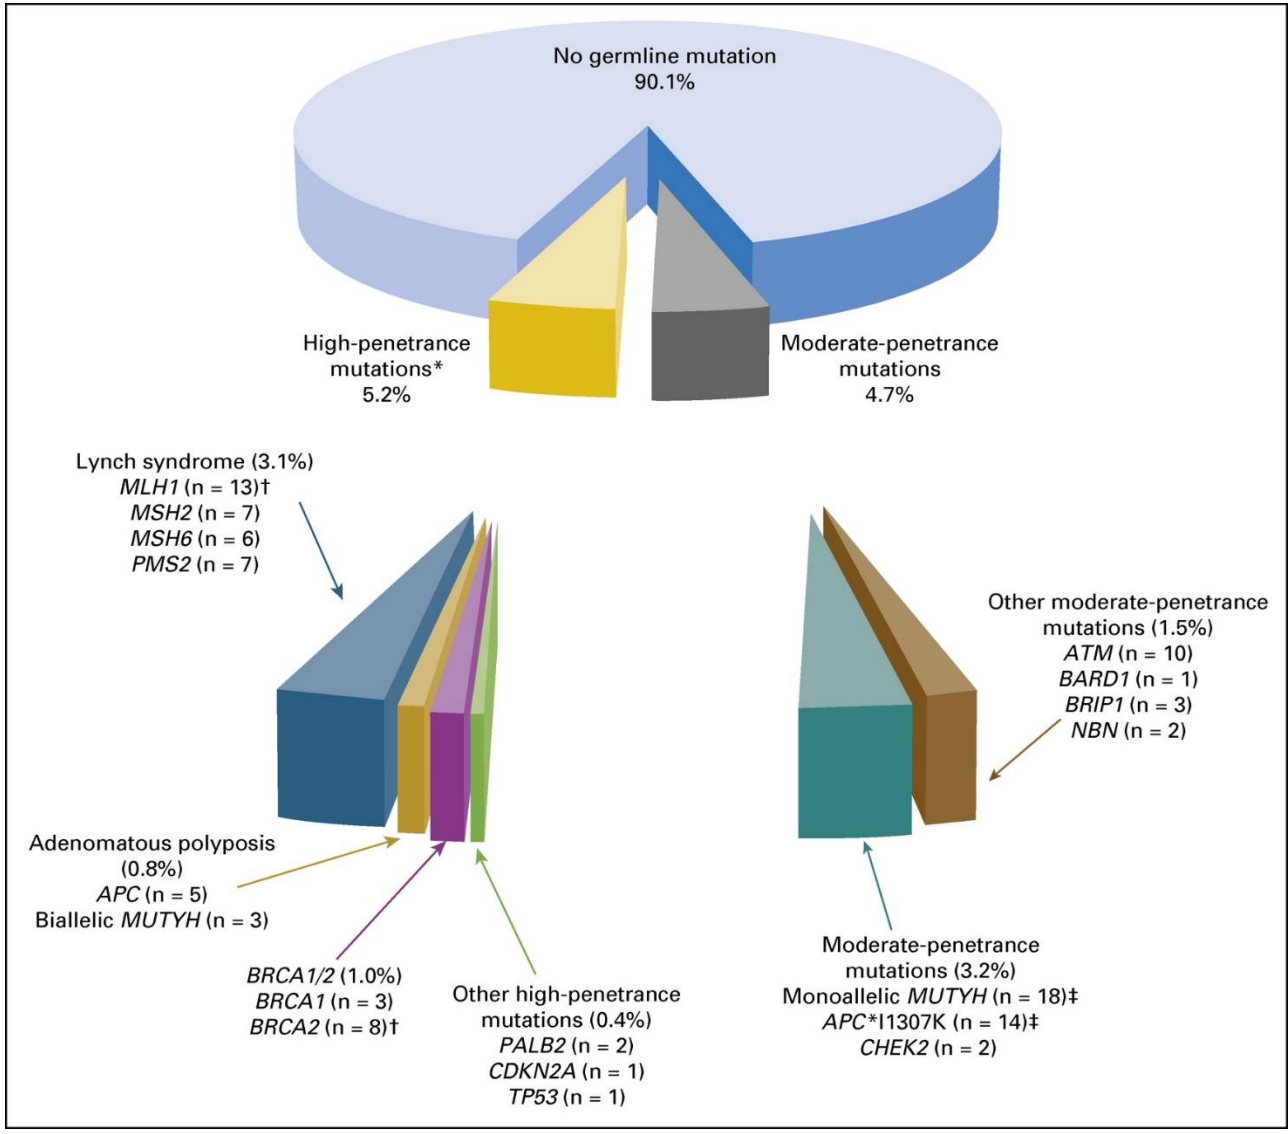
Yurgelun MB, et al. *J Clin Oncol* 2017;35:1086-95.

Multi-gene germline testing – All colorectal cancer patients

- 105/1058 (9.9%; 95% CI 8.2-11.9%) with ≥1 pathogenic/likely pathogenic germline variant
  - 3.1% with Lynch syndrome
    - 97% with MSI-H and/or MMR-D tumors
    - 97% met clinical criteria for Lynch syndrome testing
  - 7.0% with pathogenic/likely pathogenic germline variants in non-Lynch genes
- 31% of cohort carried ≥1 germline variant of uncertain significance (VUS)



Yurgelun MB, et al. *J Clin Oncol* 2017;35:1086-95.

Multi-gene germline testing – All colorectal cancer patients

- Germline *BRCA1/2* variants
  - Most common high-penetrance non-Lynch finding
    - 1.0% of CRC cohort (1:96)
    - Higher than prevalence in general population (~1:400)

- Only 27% (3/11) *BRCA1/2* probands had clinical histories that fulfilled NCCN criteria for *BRCA1/2* testing
  - 18% (2/11) had personal history of a *BRCA*-associated malignancy (breast cancer and melanoma)

- Nearly half (45%) *BRCA1/2* probands with CRC were diagnosed before age 50 years (range 31-69 years)

Yurgelun MB, et al. *J Clin Oncol* 2017;35:1086-95.

Multi-gene germline testing – All colorectal cancer patients

Factors associated with presence of a non-Lynch mutation (versus non-carriers)

Characteristic	Odds ratio (95% CI)
Age at 1st CRC diagnosis (per 10 yrs)	0.93 (0.76, 1.15)
>1 CRC diagnosis (ref: 1 CRC diagnosis)	**3.70 (1.31, 10.49)**
Personal history of other cancer†	1.76 (0.95, 3.27)
Any 1st degree relatives with CRC	1.22 (0.59, 2.51)
Any 1st degree relatives with breast ca	1.84 (0.99, 3.40)
Any 1st degree relatives with ovarian ca	3.06 (0.97, 9.64)
KRAS mutation status (ref: *KRAS* wild type)	***KRAS* G12C mutation: 4.58 (1.76, 11.92)** Other *KRAS* mutation: 0.79 (0.42, 1.48) Missing *KRAS* status: 0.75 (0.41, 1.39

Yurgelun MB, et al. *J Clin Oncol* 2017;35:1086-95.

Multi-gene germline testing – All colorectal cancer patients

- 9.9% germline mutation prevalence in unselected CRC patients
- 3.1% with Lynch syndrome (97% with MSI-H/MMR-D)
- 7.0% with non-Lynch mutations
  - 0.8% *APC* or biallelic *MUTYH* mutations
  - 1.0% *BRCA1/2* mutations
  - 0.4% with other high-penetrance mutations (*PALB2*, *CDKN2A*, *TP53*)
  - 3.2% low-/moderate-penetrance gene mutations linked to CRC risk
    - monoallelic *MUTYH*, *APC**I1307K, and *CHEK2*

- **65% of high-penetrance (non-Lynch) mutation carriers lacked clinical features of their syndrome**
- Neither age at diagnosis, family history of CRC, nor personal history of other cancer were significant predictors of carrying non-Lynch mutation

Yurgelun MB, et al. *J Clin Oncol* 2017;35:1086-95.

Multi-gene germline testing – early-onset colorectal cancer patients

- 336 individuals (32% of cohort) with diagnosed with CRC prior to age 50
- 47 (14.0%) with ≥1 pathogenic germline variant
  - 21 (6.3% of early-onset) Lynch syndrome
  - 5 (1.5%) polyposis (*APC* or biallelic *MUTYH*)
  - 5 (1.5%) *BRCA1/2*
  - 5 (1.5%) *ATM*
- 290/336 (86%) with normal germline testing
  - Ongoing efforts to examine BMI, tobacco, and other potential risk factors

Characteristic	N (%)
Male/Female	181 (54%) / 155 (46%)
Stage 0/I	31 (9%)
Stage II	64(19%)
Stage III	123 (37%)
Stage IV	117 (35%)
Right-sided CRC	100 (30%)
Left-sided CRC	119 (35%)
Rectal/rectosigmoid CRC	117 (35%)
Family history CRC (any 1st degree relative)	40 (12%)
Family history CRC (multiple 1st degree relatives)	5 (1.5%)

Yurgelun MB, et al. *J Clin Oncol* 2017;35:1086-95.

Conclusions/Summary

- Although universal tumor testing identifies almost all Lynch probands, multigene germline testing identifies an additional 7% of CRC patients with inherited cancer risk
  - Most non-Lynch gene mutations have specific management recommended by NCCN guidelines

- Spectrum of genetic factors in CRC more diverse than traditionally appreciated
  - Classic high-risk features (age, family history) do not effectively identify patients with non-Lynch mutations

- Among early onset (age <50), 14% had pathogenic germline variants, almost half of which were non-classic findings (non-Lynch, non-polyposis)

- Further studies needed to investigate other risk factors in early-onset CRC cases with negative germline testing

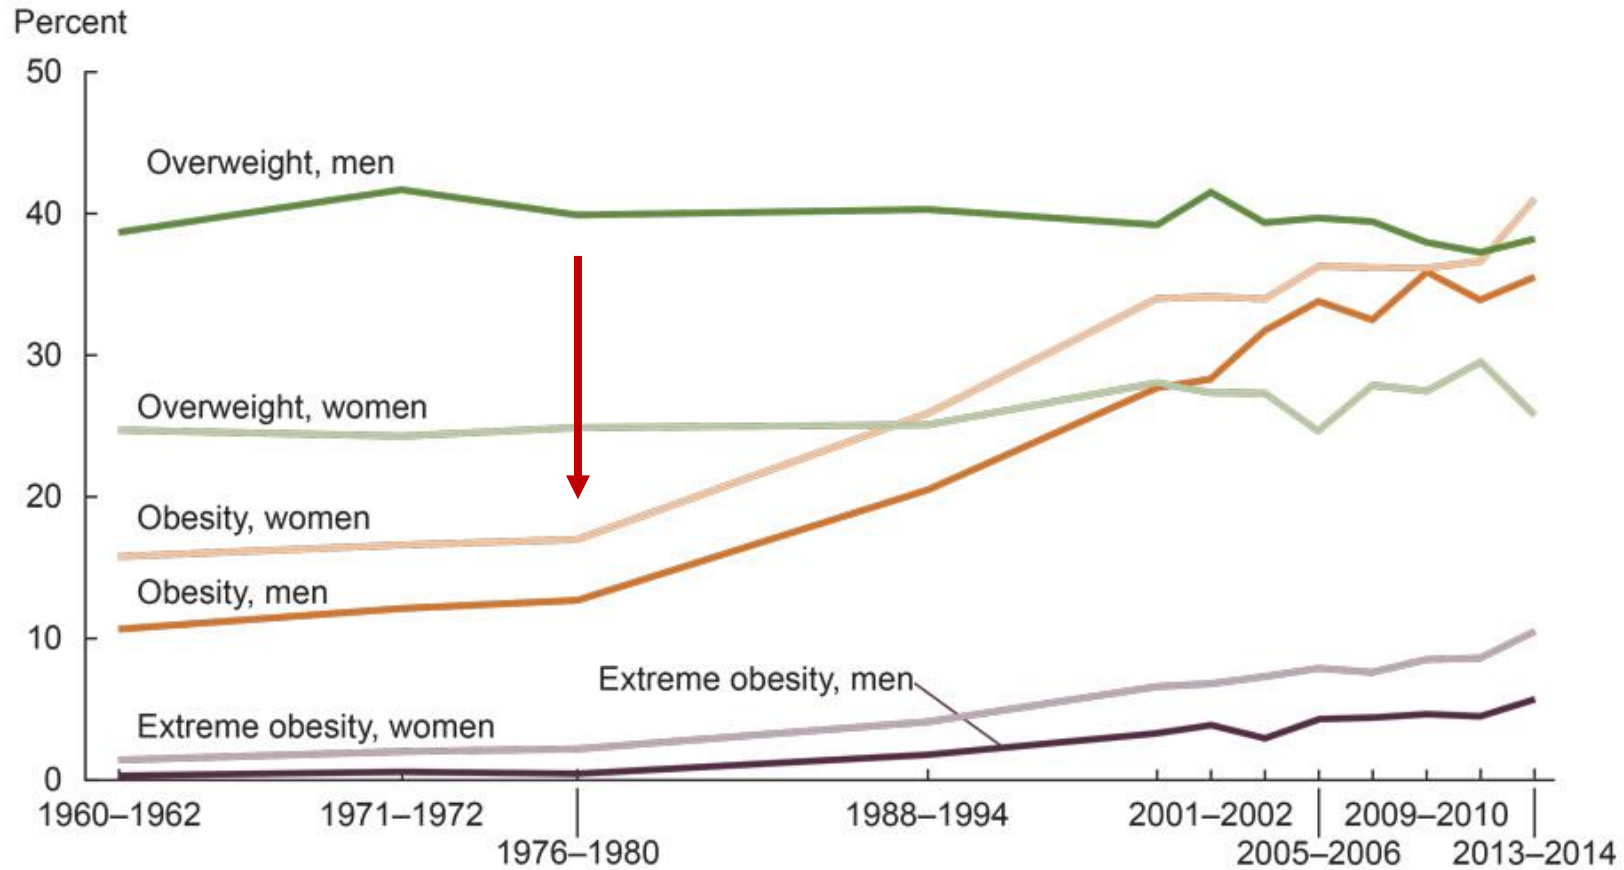
Trends in adult overweight, obesity, and extreme obesity among men and women aged 20–74: United States, 1960–1962 through 2013–2014



NOTES: Age-adjusted by the direct method to the year 2000 U.S. Census Bureau estimates using age groups 20–39, 40–59, and 60–74. Overweight is body mass index (BMI) of 25 kg/m^2 or greater but less than 30 kg/m^2; obesity is BMI greater than or equal to 30; and extreme obesity is BMI greater than or equal to 40. Pregnant females were excluded from the analysis.
SOURCES: NCHS, National Health Examination Survey and National Health and Nutrition Examination Surveys.

Obesity and risk of CRC

CUP, 2017 (WCRF-AICR)

Type of cancer	RR with BMI per 5 kg/m^2 (95% CI)
Colon (men)	RR 1.10 (1.07–1.13)[1]
Colon (women)	RR 1.04 (1.02–1.06)[1]
Rectal (men)	RR 1.02 (1.01–1.04)[1]
Rectal (women)	RR 1.01 (0.99–1.03)[1]

Nguyen *et al*, JNCI Cancer Spectrum, 2018

Potential mechanisms linking prolonged sitting and early-onset CRC

- Lower energy use, higher caloric intake, and less healthy diet
- Unbroken sitting in the absence of social or occupational cues
  - Extends exposure to fecal carcinogens, such as secondary bile acids
  - Impairs glucose homeostasis and decreases vitamin D levels
  - Linked to gut dysbiosis and enrichment for cancer associated microbes
  - Occurs in lieu of standing and other light activities that improve blood flow, muscle contraction, glucose regulation, and endothelial function

Summary

- Current obesity, obesity in early adulthood and weight change since early adulthood are associated with increased risk of early-onset CRC
- Prolonged time spent sitting watching TV, is associated with increased risk of early-onset CRC
- Obesity and sedentary behaviors may contribute to the rising burden of early-onset CRC
- Validations are needed

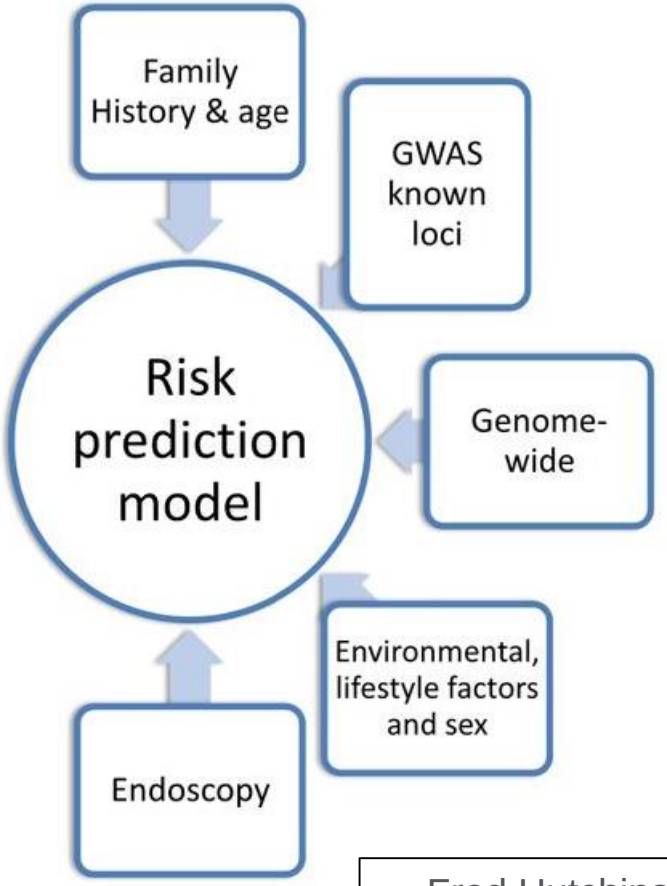
COMMON GENETIC RISK VARIANTS AND SUSCEPTIBILITY TO EARLY-ONSET COLORECTAL CANCER

Richard B. Hayes, DDS, PhD
Department of Population Health, Division of Epidemiology, NYU Langone School of Medicine

GECCO: Comprehensive CRC Risk Prediction to Inform Personalized Screening

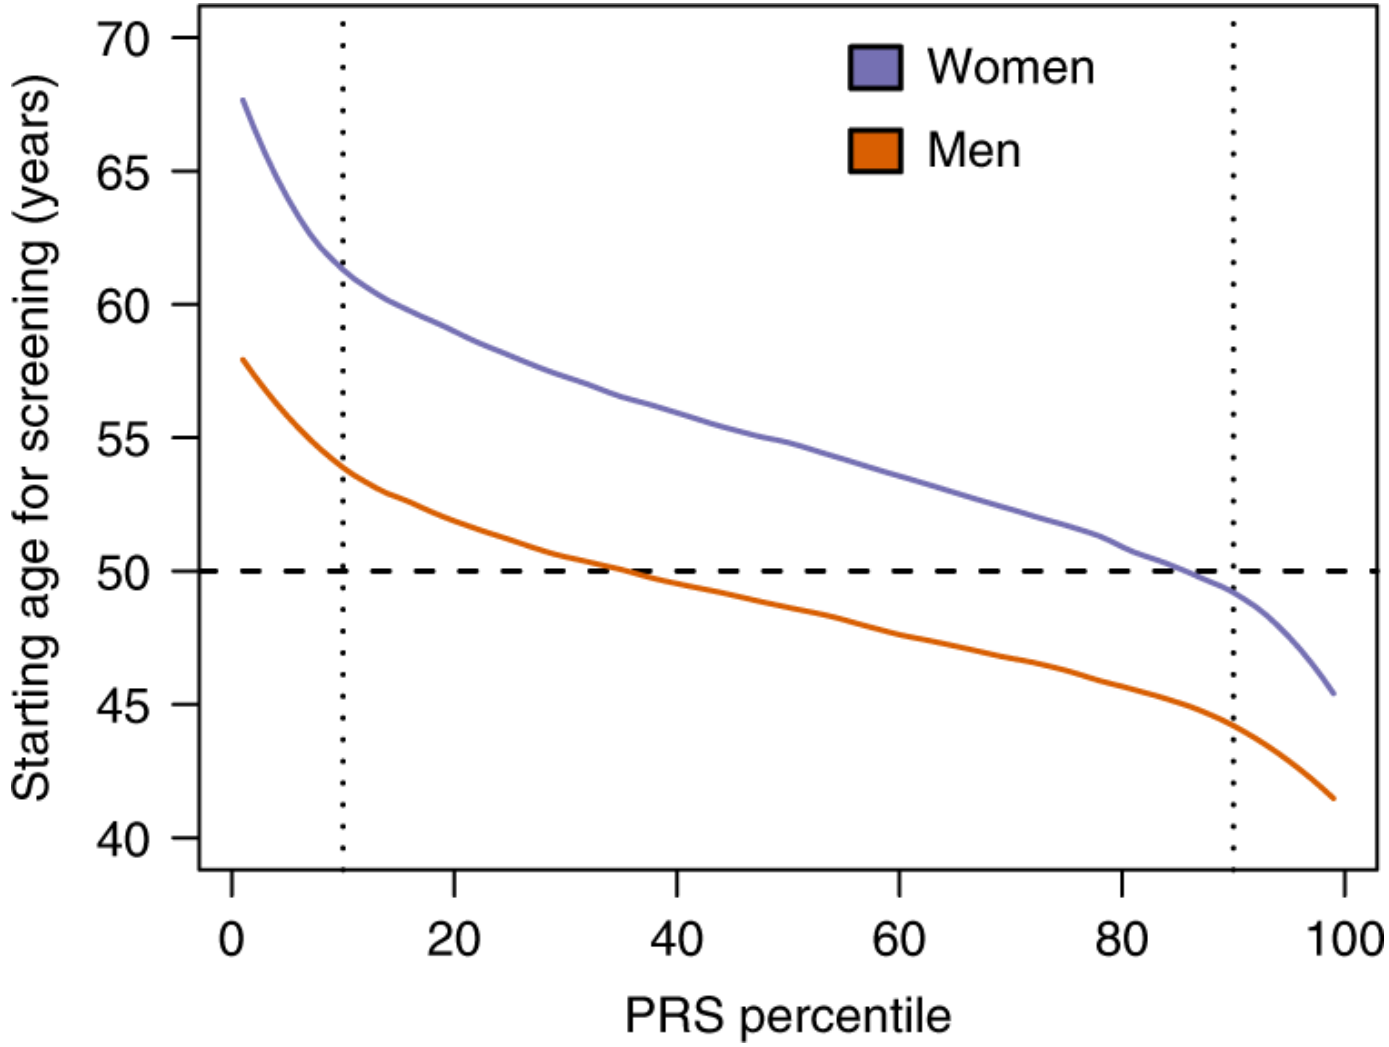
- To build a more comprehensive risk prediction model
  - Improve screening efficiency through risk stratified screening
  - Identify high risk group for targeted preventive intervention
    - *Diet*
    - *Lifestyle*
    - *NSAIDs*



- Fred Hutchinson Cancer Research Center
- Kaiser Permanente Northern California
- NYU Langone Health

R01CA206279, R03CA215775

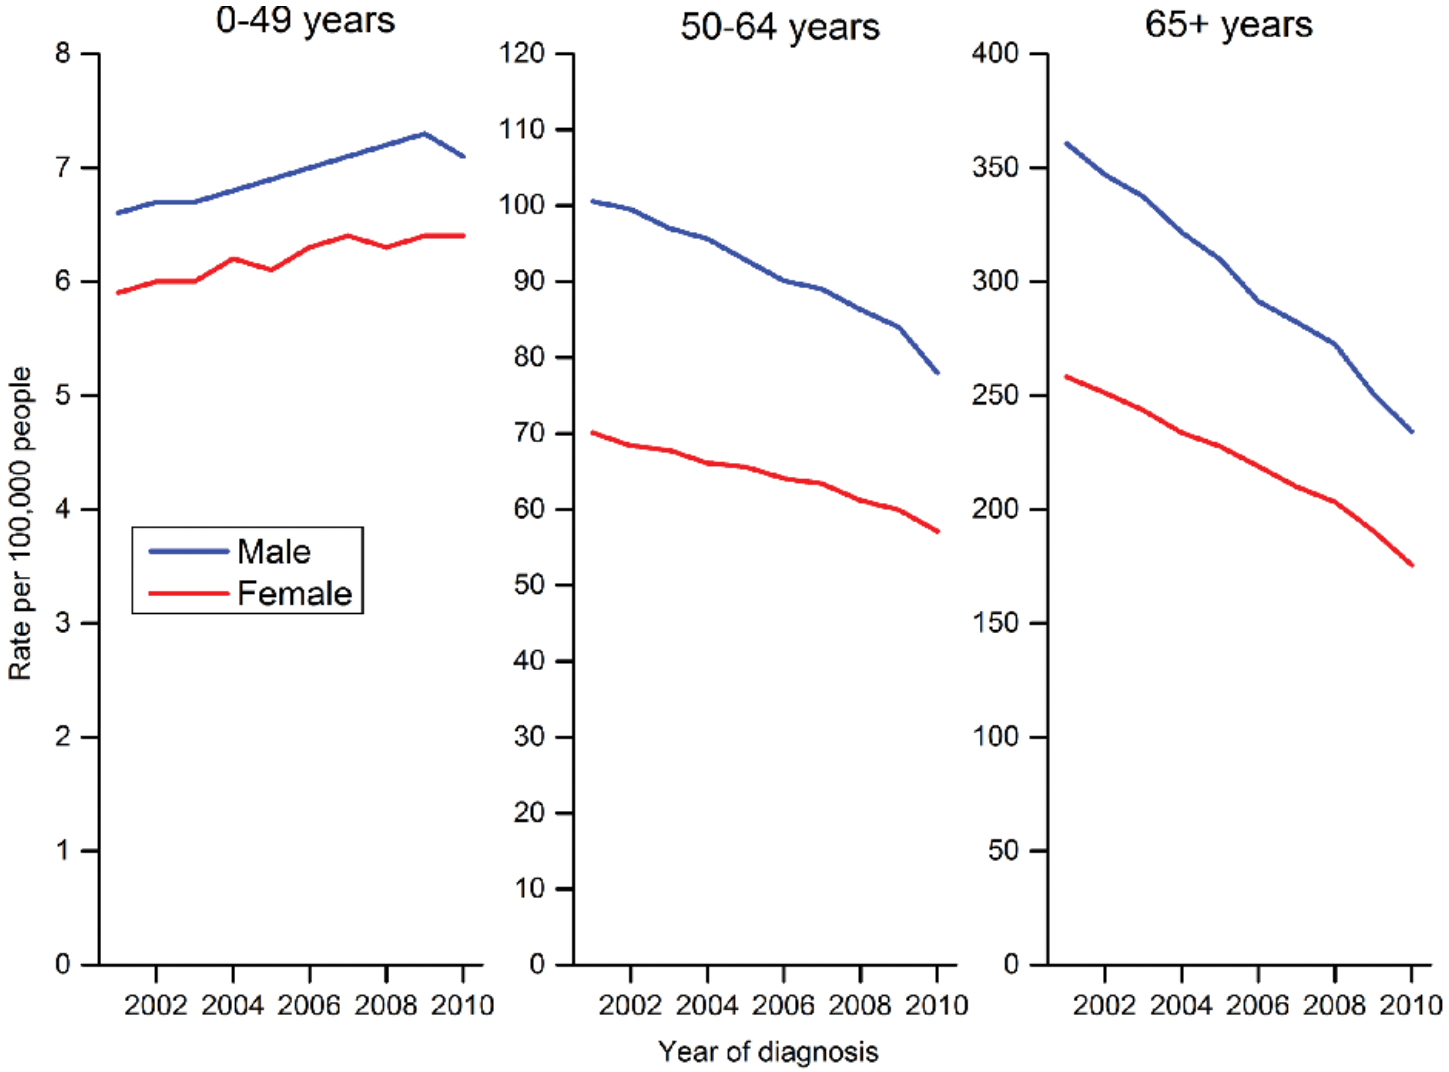
Polygenic risk score and recommended age to start CRC screening



The risk threshold to determine the age for the first screening was set as the average of 10-year CRC risks for a 50-year-old man (1.25%) and woman (0.68%) who have not previously received an endoscopy

Huyghe JR et al., Nature Genetics, 2018

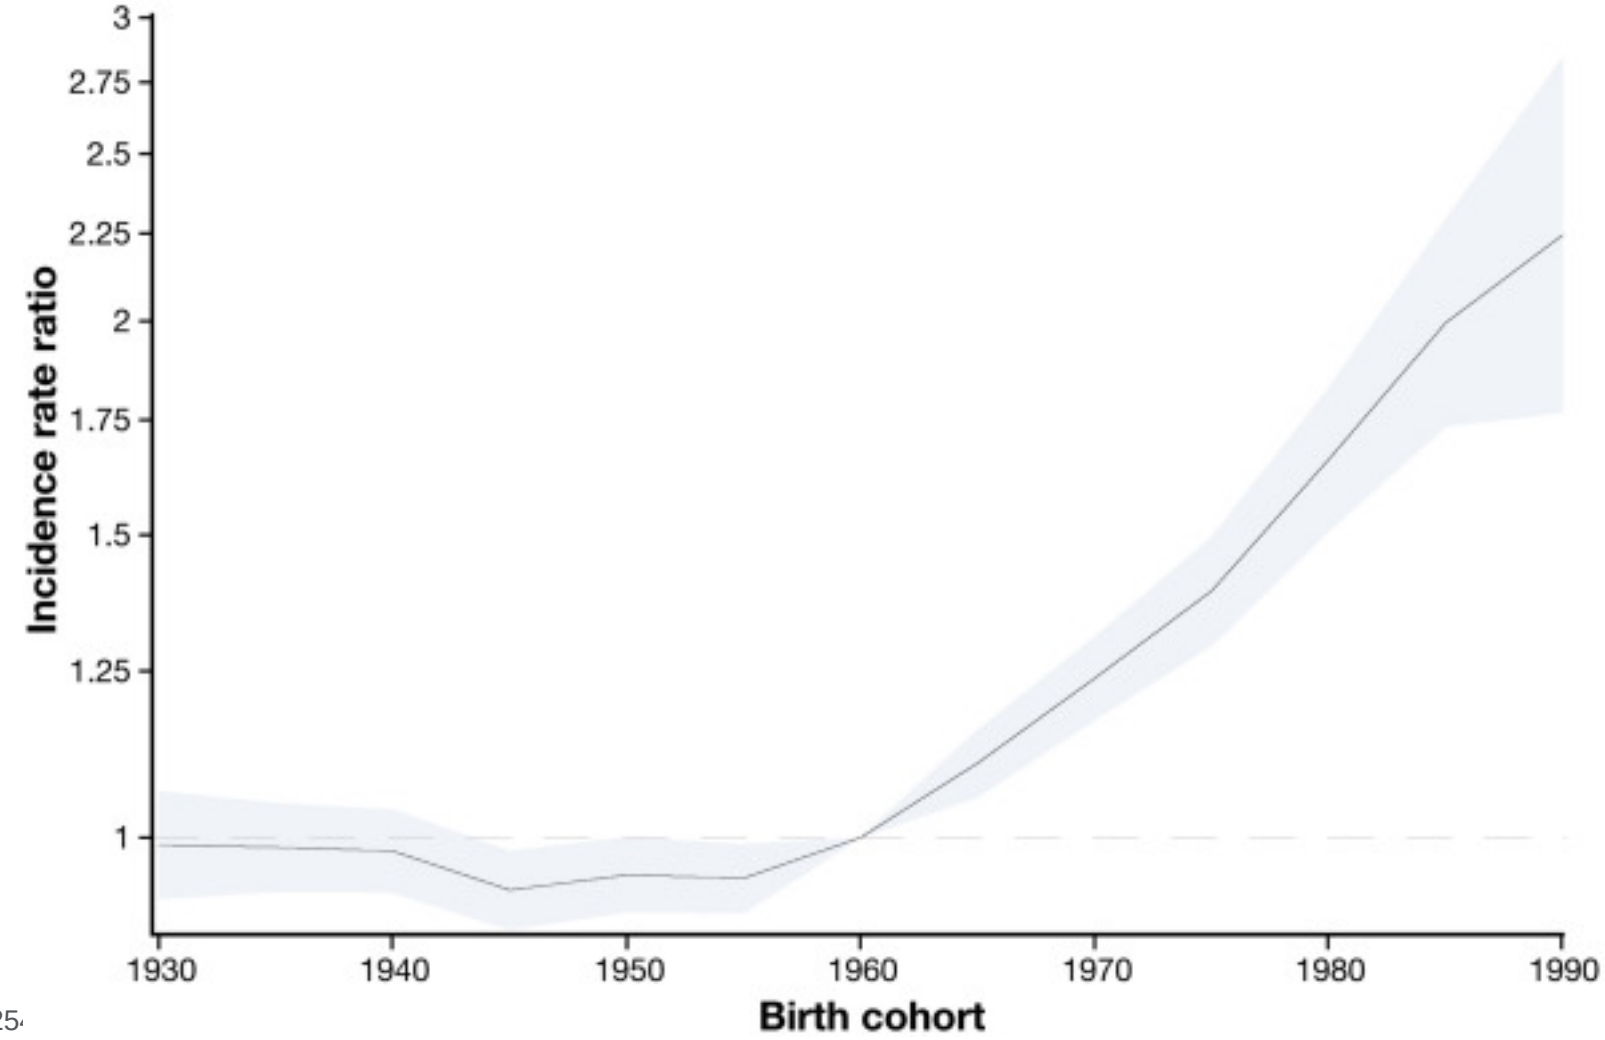
A Second Motivation to Reconsider Age to Start Screening



- Early-onset CRC projected to account for 10% to 25% of newly-diagnosed CRC in the U.S. by 2030
- Presents with:
  - Higher pathologic grade
  - Distant disease
  - Greater incidence of recurrence and metastatic disease
  - Tend toward more disease of the distal colon and rectum

253 Siegel, Rebecca L. et al. “Colorectal cancer statistics, 2014.” *CA: a cancer journal for clinicians* 64 2 (2014): 104-17.

Early-onset CRC, by Birth Cohort, United States, 1930-1990



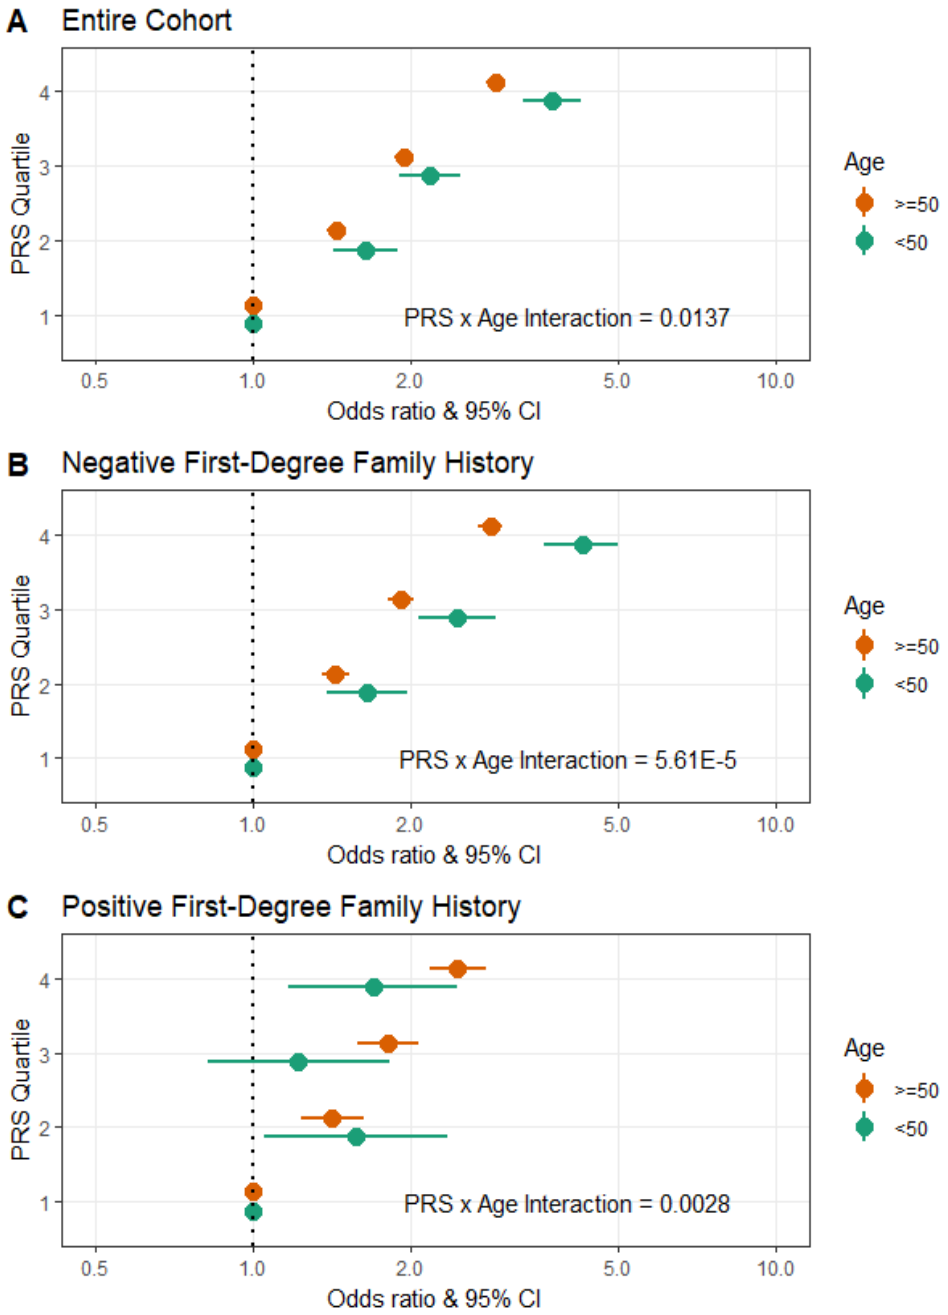
Murphy CC et al., Gatroenterology, 2018

Objective

- Investigate CRC risks associated with a 95 SNP polygenic risk score (PRS) for participants of European ancestry by age (<50, >50) at CRC diagnosis
- Determine whether younger individuals are more susceptible to these risks

Discovery Dataset

- **50,023 CCR Cases and 58,039 Controls**
  - Colon Cancer Family Registry (CCFR)
  - Colorectal Transdisciplinary (CORECT) Study
  - Genetics and Epidemiology of Colorectal Cancer Consortium (GECCO)
- **5,479 CRC and 6,718 Controls, <50 years of age**
- **Limited to European ancestry**
- **First-degree family history** by self-report or interview-administered questionnaire
- **Case-control, cohort and family-based studies**

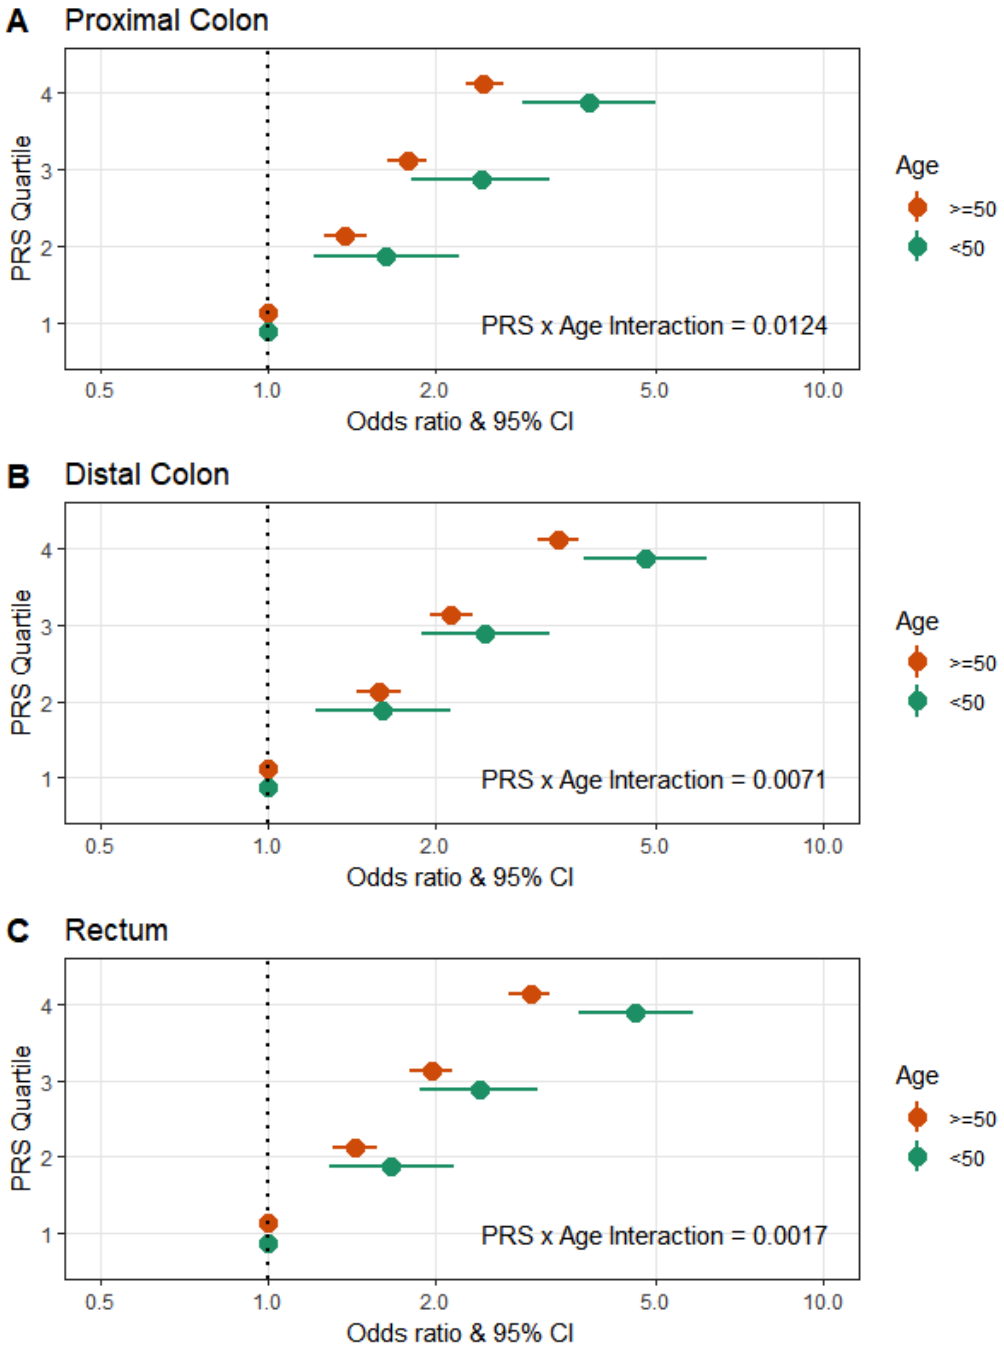


Relative Risk of CRC, by age and First-degree family history of CRC

(A) All participants

(B) Negative for a family history of CRC

(C) Positive for a family history of CRC



Family History Negative
Relative Risk of CRC, by Disease Site

Replication Dataset

- **72,573 Kaiser Permanente Members participating in the Research Program on Genes, Environment and Health (RPGEH)**
- **Limited to European ancestry (genetically defined)**
- **Cohort linked to the KPNC cancer registry**
- **First-degree family history** by self-report through questionnaire and medical records
- **Cohort Analysis by Kaplan-Meier and Cox regression**

Further Considerations

- Combining the PRS with environmental/lifestyle risk factors
- 95 SNP PRS was not specific for young-onset CRC
- Assessment was for Europeans only
- We did not take into account Lynch and other rarer syndromes

Pearlman R. JAMA Oncol. 2017 Apr 1; 3(4): 464–471.

Conclusions

- This is the first study to evaluate an individual's cumulative genetic risk profile for common at-risk alleles and early-onset CRC
- PRS is more strongly associated with early-onset cancer than with late-onset cancer

2017 DIET, NUTRITION, PHYSICAL ACTIVITY AND COLORECTAL CANCER

		DECREASES RISK	INCREASES RISK
STRONG EVIDENCE	Convincing	Physical activity[1,2]	Processed meat[3] Alcoholic drinks[4] Body fatness[5] Adult attained height[6]
	Probable	Wholegrains Foods containing dietary fibre[7] Dairy products[8] Calcium supplements[9]	Red meat[10]
LIMITED EVIDENCE	Limited – suggestive	Foods containing vitamin C[11] Fish Vitamin D[12] Multivitamin supplements[13]	Low intakes of non-starchy vegetables[14] Low intakes of fruits[14] Foods containing haem iron[15]
	Limited – no conclusion	Cereals (grains) and their products; potatoes; animal fat; poultry; shellfish and other seafood; fatty acid composition; cholesterol; dietary n-3 fatty acid from fish; legumes; garlic; non-dairy sources of calcium; foods containing added sugars; sugar (sucrose); coffee; tea; caffeine; carbohydrate; total fat; starch; glycaemic load; glycaemic index; folate; vitamin A; vitamin B6; vitamin E; selenium; low fat; methionine; beta-carotene; alpha-carotene; lycopene; retinol; energy intake; meal frequency; dietary pattern	
STRONG EVIDENCE	Substantial effect on risk unlikely		

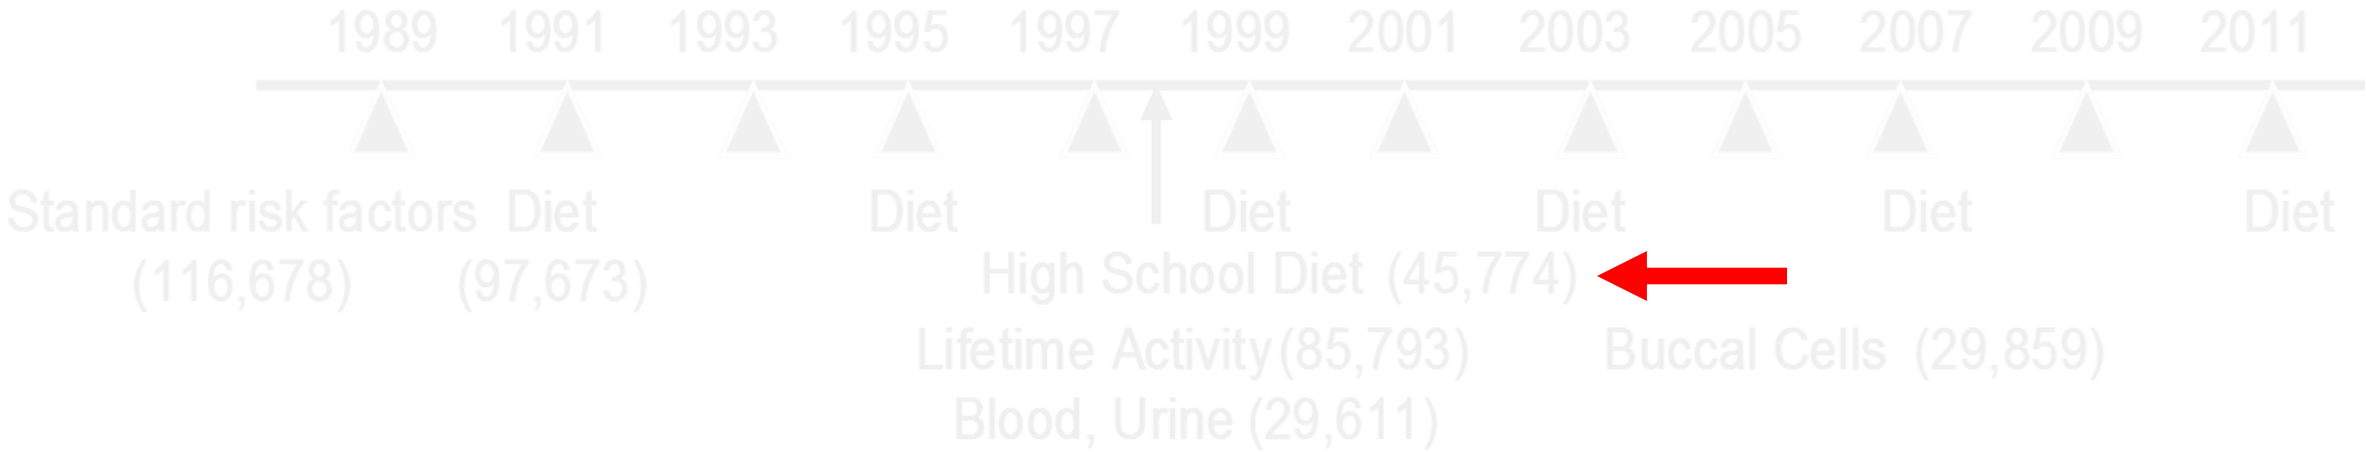
Why study early life exposures and CRC?

- CRC development can take several decades
- By focusing on exposures during adulthood only, etiologically relevant time periods may have been missed
- The recent increase in EOCRC incidence (sporadic) support that early life factors may be involved in development of colorectal cancers
- Except for body fatness data on early life risk factors and colorectal neoplasia are limited

Previous Studies- Early Life Exposures and Colorectal Neoplasia (NHS 2)

Nurses' Health Study 2 (NHS 2)

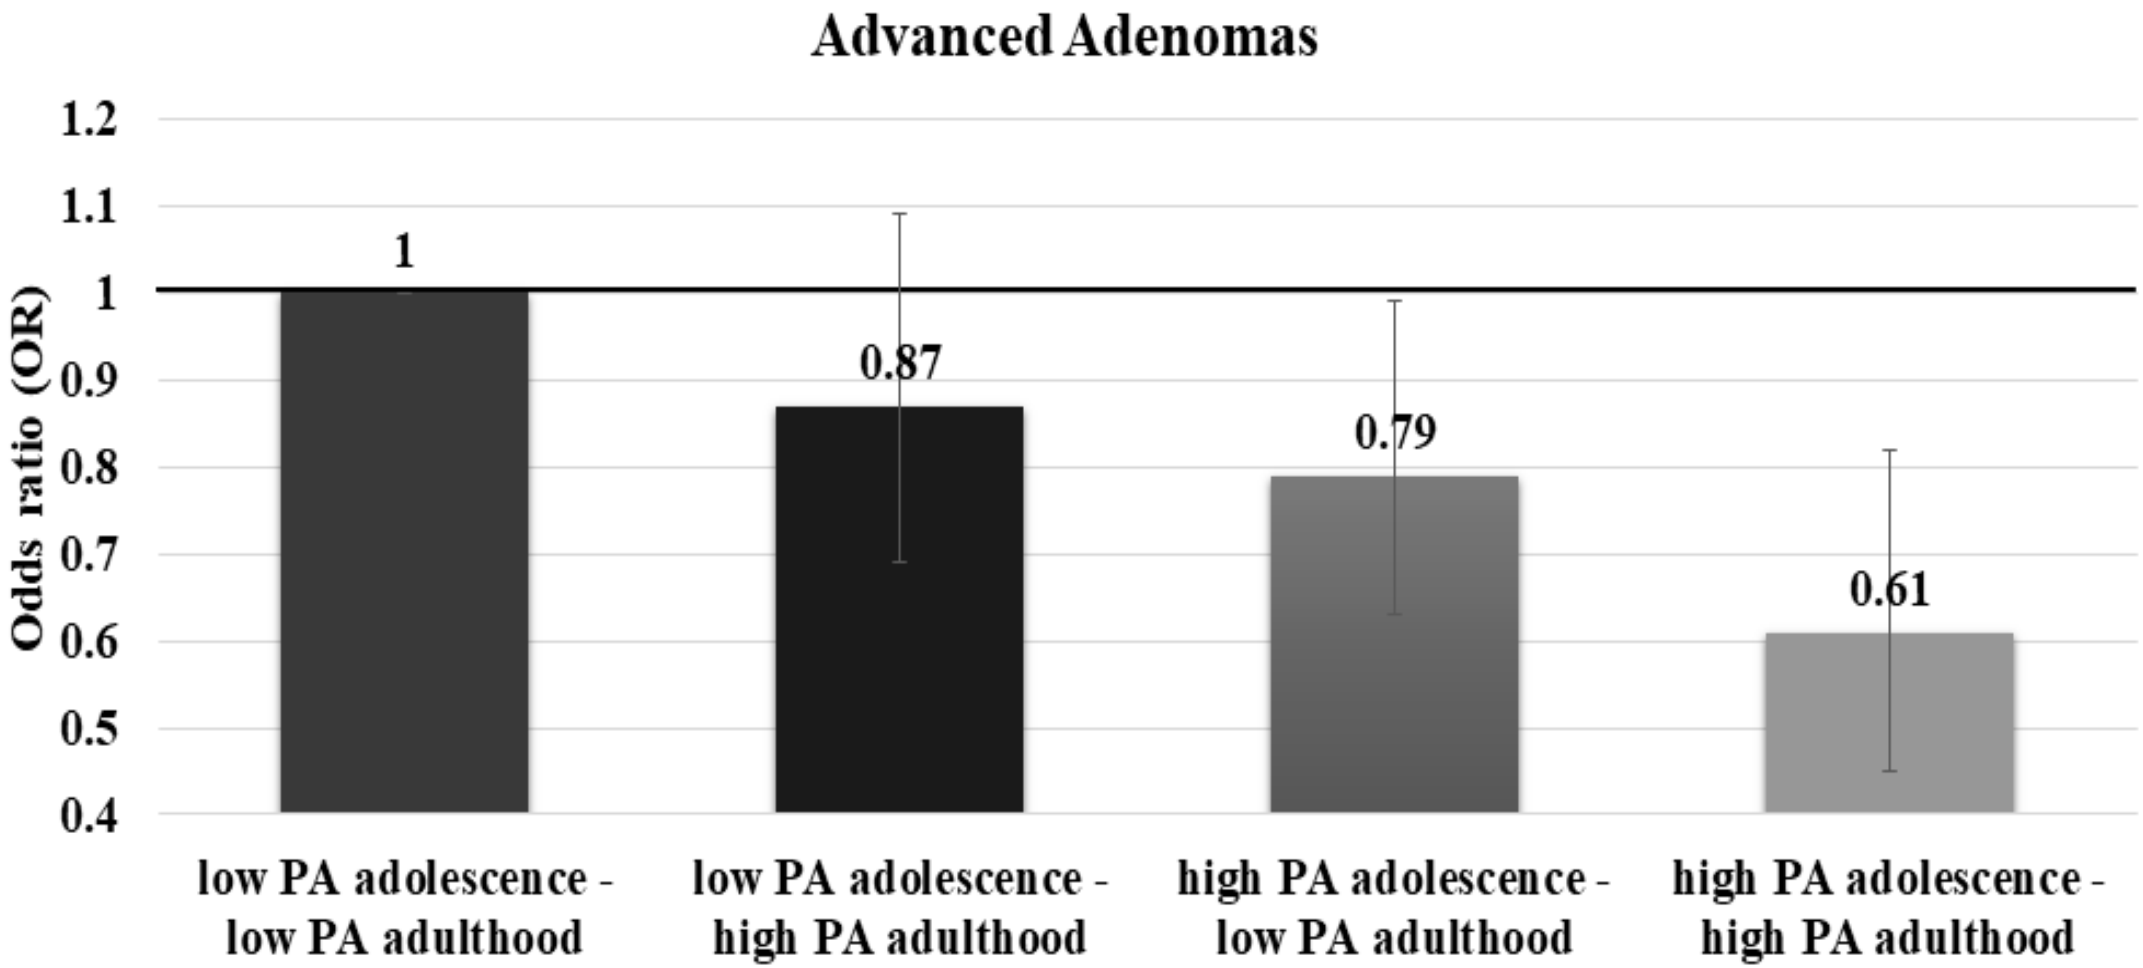
In 1998, 45,774 nurses completed a validated food frequency questionnaire to assess diet during high school (HS-FFQ)



Previous findings in NHS 2 (HS-FFQ)

- Western dietary pattern during adolescence
  - Derived using principal component analysis
    - High intake of desserts and sweets, snack foods, red and processed meat, fries and refined grains
  - Higher risk of **rectal adenoma (adenomatous polyps)**
    - Q5 vs. Q1: **OR 1.78**, 95% CI 1.12-2.85, p-trend 0.005
  - Higher risk of **advanced/high risk adenoma**
    - Q5 vs. Q1: **OR 1.58**, 95% CI 1.07-2.33, p-trend 0.08

Physical activity during adolescence and adulthood and advanced colorectal adenoma (total all age-groups) in NHS 2 (Rezende et al. in press, under embargo, do not cite)



Recently funded NCI grant: EOCRN

- FOA (NCI): Exploratory Grants in Cancer Epidemiology and Genomics Research (R21)

- Principal investigators (MPI): Kana Wu and Shuji Ogino (Brigham and Women's Hospital)

- Title: "*Integrating diet, lifestyle and tumor tissue molecular subtyping to study the role of adolescent calcium intake on the risk of early onset colorectal neoplasia"* (R21 CA230873)

Conclusions

Based on a limited number of studies, there is evidence that diet during adolescence may play a role in development of colorectal neoplasia

(relevant for sporadic EOCRC ?)

JOURNAL OF CLINICAL ONCOLOGY ORIGINAL REPORT

New-Onset Cardiovascular Morbidity in Older Adults With Stage I to III Colorectal Cancer

Kelly M. Kenzik, Courtney Balentine, Joshua Richman, Meredith Kilgore, Smita Bhatia, and Grant R. Williams

Chemotherapy-induced vascular toxicity

- The authors evaluated from the SEER-Medicare database patients with stage I-III CRC diagnosed at age > 65 years between 2000-2011 (n = 72,408) and compared these patients with a matched cohort of Medicare patients without cancer (n = 72,408).
- Median age at diagnosis of CRC was 78 years (66-106y), and median follow-up was 8 years.
- The 10-year cumulative incidence of new-onset CVD and CHF were 57.4% and 54.5% compared with 22% and 18% for control, respectively ($P < .001$).
- The authors concluded that **older patients with CRC are at increased risk of developing CVD and CHF.**

No evidence regarding young patients… Can we detect the seed of evil?

Association of Chemotherapy for Solid Tumors With Development of Therapy-Related Myelodysplastic Syndrome or Acute Myeloid Leukemia in the Modern Era

Lindsay M. Morton, PhD; Graça M. Dores, MD, MPH; Sara J. Schonfeld, PhD, MPH; Martha S. Linet, MD, MPH; Byron S. Sigel, BA; Clara J. K. Lam, PhD; Margaret A. Tucker, MD; Rochelle E. Curtis, MA

Editorial page 303

Supplemental content

IMPORTANCE Therapy-related myelodysplastic syndrome or acute myeloid leukemia (tMDS/AML) is a rare, usually fatal complication of chemotherapy, including certain alkylating agents, topoisomerase II inhibitors, and platinum compounds. With the introduction of new chemotherapeutic agents, expanded indications for established agents, and increased neoadjuvant and adjuvant chemotherapy, tMDS/AML risks in the modern age are poorly understood.

OBJECTIVES To quantify tMDS/AML risk after chemotherapy for solid cancer among United States adults since 2000 and correlate tMDS/AML risk patterns with chemotherapy treatment practices.

RESULTS Based on 1619 tMDS/AML cases in the SEER database (mean [SD] age, 64.3 [12.2] years; 1148 [70.9%] female), tMDS/AML risks were statistically significantly elevated after chemotherapy for 22 of 23 solid cancers (all except colon). Relative risks ranged from 1.5 to greater than 10 and excess absolute risks from 1.4 to greater than 15 cases per 10 000 person-years compared with the general population. Overall survival following tMDS/AML diagnosis was poor (1270 of 1619 patients [78.4%] died; median overall survival, 7 months). For patients treated with chemotherapy at the present time, approximately three-quarters of tMDS/AML cases expected to occur within the next 5 years will be attributable to chemotherapy. In the SEER-Medicare database, use of known leukemogenic agents, particularly platinum compounds, in initial chemotherapy increased substantially since 2000, most notably for gastrointestinal tract cancers (esophagus, stomach, colon, and rectum; 10% in 2000-2001 to 81% during 2012-2013).

NEXT STEPS OVER *NOMO1*:

- **Retrospective** study of other populations**:**

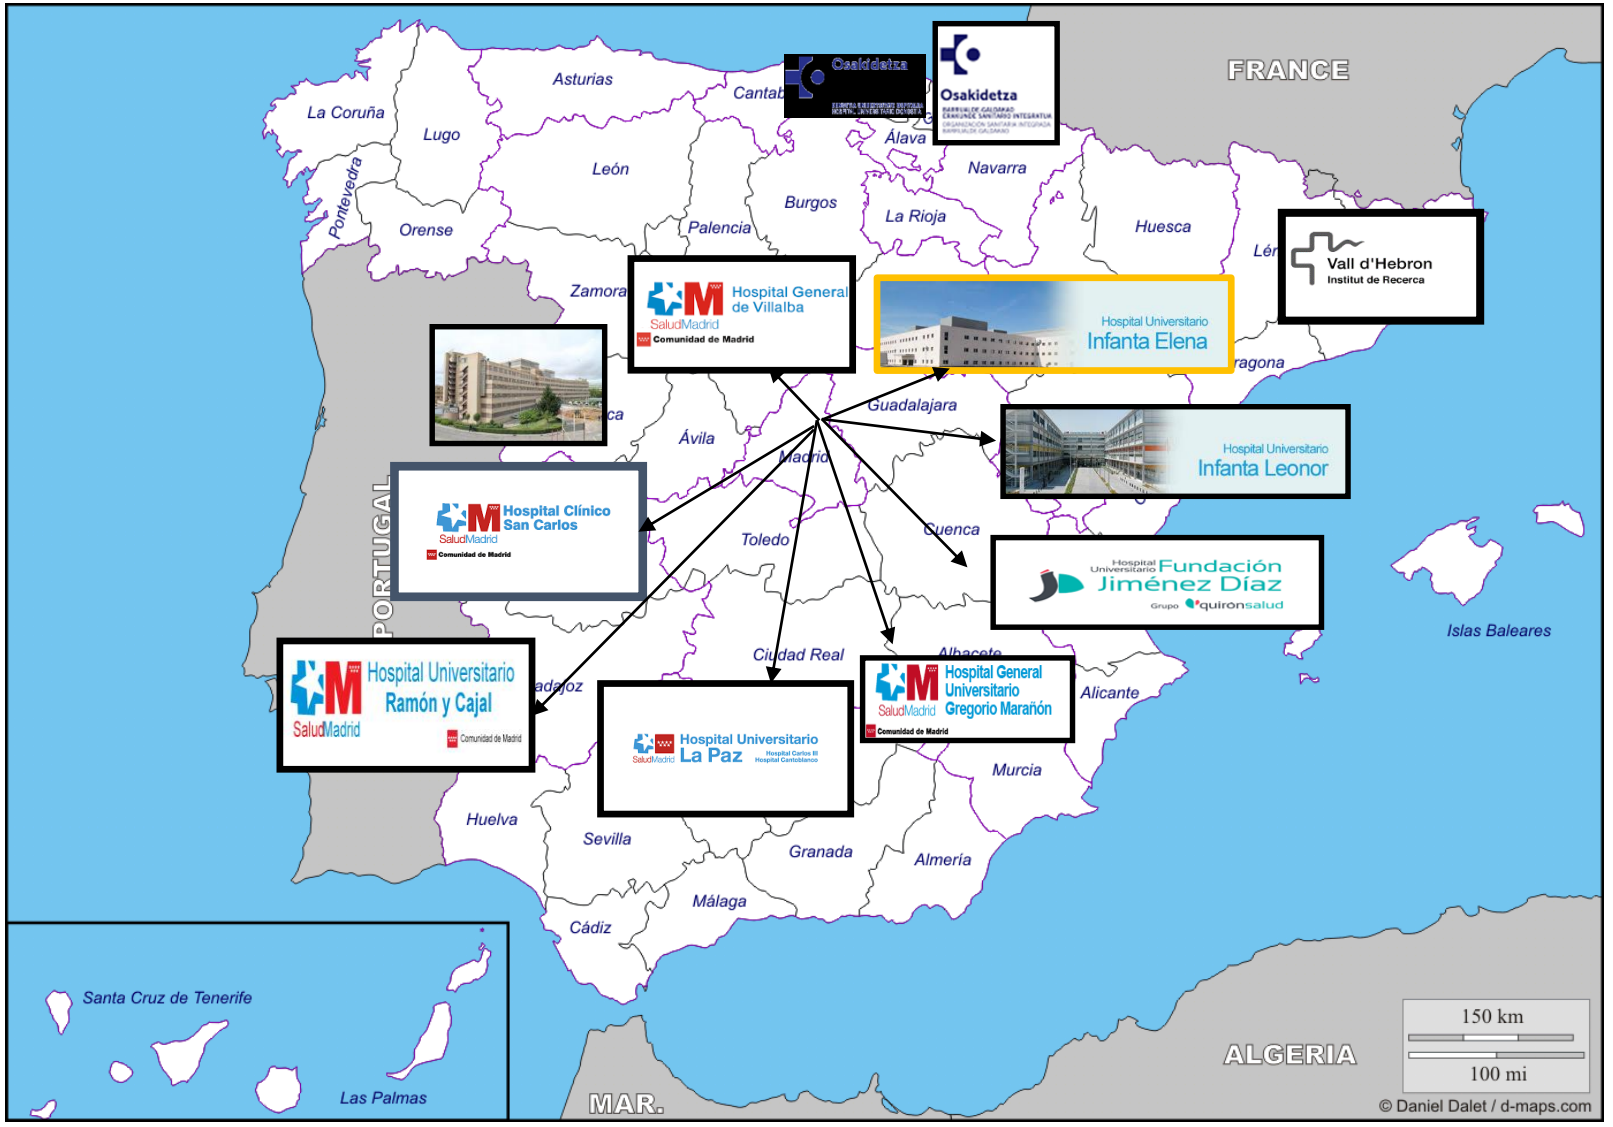
  - Validation sample (EOCRC).
  - Colorectal polyps (<50 y/o).
  - CRC sample without age-of-onset criterion.
  - *NOMO1* status in hepatic metastasis and local recurrence.

- **Prospective** study (EOCRC):

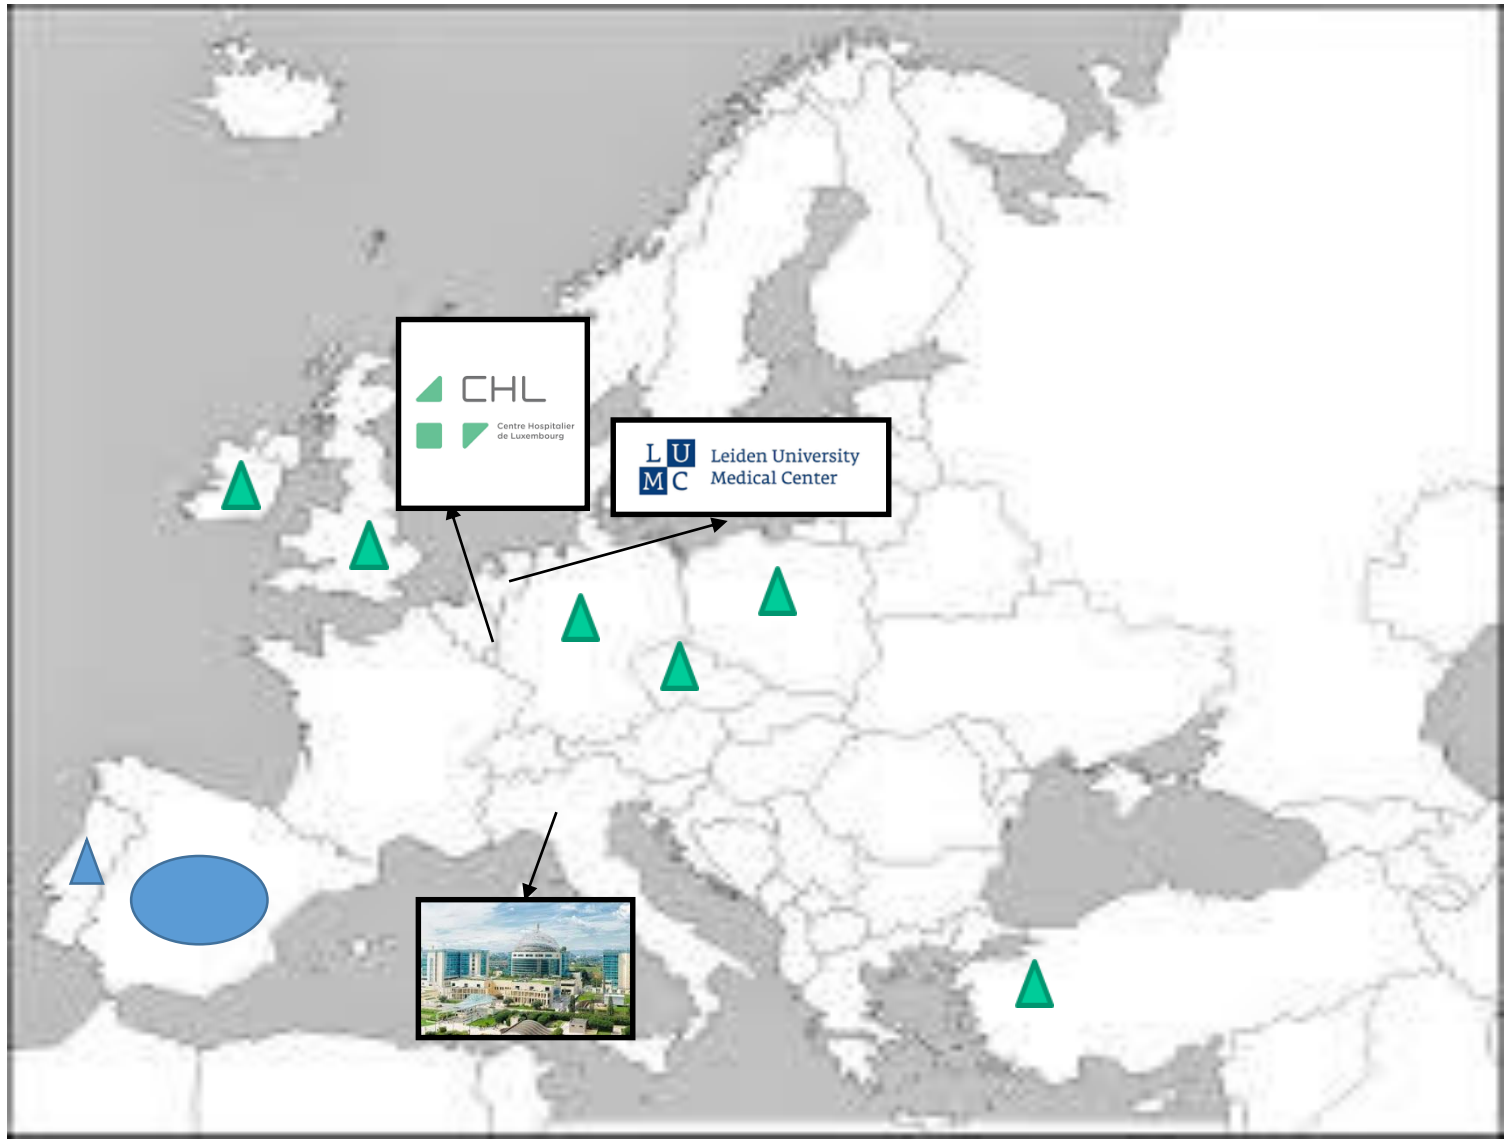
  Liquid biopsy: ~~EARLY DIAGNOSIS / RECURRENCE.~~

  Epidemiological study: ~~enviromental / Microbiome.~~

SPANISH PROSPECTIVE STUDY



EUROPEAN EOCRC STUDY (EUREOC)



WORLDWIDE COLLABORATIONS

SAMPLE COLLECTION

- EOCRC: CRC diagnosed younger than 50 y/o (exclud. IBD)
- Clinical and familial data.
- Epidemilogical questionnaire.

TUMOR AND HEALTHY COLON TISSUE.

STOOL.

PERIPHERAL BLOOD SAMPLES (COMPLETE BLOOD AND PLASMA-SERUM).

EOCRC QUESTIONNAIRE

- Demographic data.
- BMI
- Eating habits
- Other habits: alcohol, smoking and medicines
- Dental history and examination
- Physical activity
- Personal medical history
- Familial medical history

AT THE TIME OF SURGERY: TUMORAL AND HEALTHY TISSUE.
PERIPHERAL BLOOD SAMPLE.

24-48h after surgery, peripheral blood sample (optional).

At the end of the Chemotherapy treatment: SP (optional).

ANNUALLY: BLOOD SAMPLE.
or
RECURRENCE: Tissue and blood sample.

Rectal ADCA: Also, tissue (endoscopy?) and blood sample before neoadjuvant treatment

- **Samples collected and data so far:**

59 EOCRC samples (Spain):

All clinical and familial data. Tumor and normal tissue.
Blood samples (germline and serum/plasma).
5 stool.

47% Rectal; 31% Right; 22% Left.

54 EOCRC samples (Italy)

SOME IMMEDIATE APPROACHES

- Whole exome sequencing.

  APC - / No mutated cases within NGS

- Microbiome-MD2-Obesity and EOCRC.

  Insuline resistance.

- Immunoresponse

APPROACHES OVER *EOCRC*:

SCREENING BASED STRATEGIES.

- Blood-based, **circulating miRNA signature** for the diagnosis-prognosis of patients with EOCRC.
- Defining **risk** populations for EOCRC:

  Obesity/MD2/Insuline resistance.

- **Liquid biopsy:** Early diagnosis and recurrence.

1ST EARLY-ONSET COLORECTAL CANCER

INTERNATIONAL SYMPOSIUM

MADRID
6th JUNE
2019

ColoRectal Cancer in Adults of Young ONset
"CRAYON" Study

Steven Itzkowitz, MD, FACP, FACG, AGAF
Professor of Medicine and Oncological Sciences
Director, GI Fellowship Program
Icahn School of Medicine at Mount Sinai

Mount Sinai

CRAYON Study: Rationale

1. Rates of CRC are increasing among 20-49 yr olds worldwide. Why??
2. Many retrospective studies being performed in USA and abroad.
3. Most experts call for PROSPECTIVE studies to be done.
4. Some prospective studies already being performed (MSKCC, Spain/Europe)
5. Can CRAYON provide more detailed information related to risk factors/causation?

CRAYON Study: Purpose

1. To identify risk factors of Early Onset CRC
2. To use these factors to predict individuals <50 yrs old who are at higher risk of having (current) or developing (future) CRC

CRAYON Study: Why in NYC?

1. NYC GI community: a track record of collaboration

- **C5 Coalition, NYCCO, NYSGE**

2. Density of population conducive to collecting CRC cases and controls in a timely fashion

- **~350 EO-CRC/year (source: NY State Cancer Registry)**

3. Geographic proximity:

- **Relatively shared environmental exposures**
- **Facilitates collaboration, specimen acquisition**
- **Enables patients to be captured even if they change institutions for care**

CRAYON Study: History

October, 2017 NCCRT Summit – initial idea developed

May, 2018 DDW - Imperiale/Itzkowitz

June, 2018 Identify group of interested site PIs

Ann Zauber, PhD	MSKCC	Member, Attending Biostatistician

What questions would you like to see answered by the CRAYON study?

- Is the increasing CRC incidence caused by established risk factors or something novel? What preventable factors exists for EOCRC?
- Is there a target Risk Ratio or Odds Ratio that would be clinically relevant in decision making, and could we reach it with better risk markers?
- Can we capture information regarding early life events, include in utero, early life, and young adult exposure?
- Can we create a registry of all colonoscopies for patients under 50, including both the reason for colonoscopy and the outcome of the colonoscopy?
- To what extent does our population of EOCRC patients have an unknown family history of genetic conditions, such as Lynch Syndrome, that contributes to the development of EOCRC? Can we better educate that sub-population of their risk for EOCRC?

CRAYON: Study Design

- Prospective Case-Control Study
- Cases: individuals age 25-49 with newly diagnosed CRC.
- Controls: individuals age 25-49 from two groups:
  - Colonoscopy-Negative controls (CNC): Underwent colonoscopy for symptoms (change in BM, abd pain, minor bleeding) found to have no neoplasia.
  - Waiting Room Controls: healthy individuals who are escorting patients for colonoscopy and/or colon cancer surgery.
  - ?Friend controls
  - Cases:Controls 1:4 (2 CNC; 2 WRC)
- Eventual Sample size: 400 Cases: 1600 Controls.

CRAYON: Phases of Investigation

Phase	Purpose	Institution	Goal
Phase 1	**Feasibility Study** **(3/19-12/19)**	Mount Sinai	• Enroll cases/controls • Willingness to participate
Phase 2	**Pilot Study** **(10/19-12/20)**	4-5 Sites	• Expand to other sites • Demonstrate collaboration • Refine instruments/bio-specimens
Phase 3	**Main Study** **(Spring 2020 submission)**	All Sites	• Definitive study

CRAYON: Feasibility Study

- To be conducted at Mount Sinai (Funded: The Chemotherapy Foundation)
- Goal: Enroll 10 Cases and 40 Controls
- Conduct interviews to determine willingness to participate in a study that involves an extensive questionnaire, as well as biospecimen collection.
- Interview Questions:
  - Would you be willing to spend 1-2 hours for the initial interview?
  - Would you be willing to complete annual follow-up surveys?
  - We want to learn more about your early childhood experiences. Do you think your parents would be willing to participate? Would you be able to ask them?
  - Would you be willing to provide a blood sample? Stool sample? Saliva sample? Baby teeth (if you/your parents have them)?
  - [For Cases]: Would you be willing to share our flyer and potentially recruit 1-2 friends or family members?

Next Steps

- **Work on Feasibility Study**
- **Prepare for Retreat #2 (Sept 2019)**
- **Develop sites for Pilot phase**
- **Explore funding sources for pilot projects**

CRAYON Study: Rationale

Phase	Purpose	Institution	Goal
Phase 1	**Feasibility Study** **(3/19-12/19)**	Mount Sinai	• Enroll cases/controls • Willingness to participate
Phase 2	**Pilot Study** **(10/19-12/20)**	4-5 Sites	• Expand to other sites • Demonstrate collaboration • Refine instruments/bio-specimens
Phase 3	**Main Study** **(Spring 2020 submission)**	All Sites	• Definitive study

CRAYON: Feasibility Study

- To be conducted at Mount Sinai (Funded: The Chemotherapy Foundation)
- Goal: Enroll 10 Cases and 40 Controls
- Conduct interviews to determine willingness to participate in a study that involves an extensive questionnaire, as well as biospecimen collection.
- Interview Questions:
  - Would you be willing to spend 1-2 hours for the initial interview?
  - Would you be willing to complete annual follow-up surveys?
  - We want to learn more about your early childhood experiences. Do you think your parents would be willing to participate? Would you be able to ask them?
  - Would you be willing to provide a blood sample? Stool sample? Saliva sample? Baby teeth (if you/your parents have them)?
  - [For Cases]: Would you be willing to share our flyer and potentially recruit 1-2 friends or family members?

Next Steps

- **Work on Feasibility Study**
- **Prepare for Retreat #2 (Sept 2019)**
- **Develop sites for Pilot phase**
- **Explore funding sources for pilot projects**
